## Fall Arrest Equipment

## Protecta Harnesses

Over one million Protecta harnesses have been supplied worldwide. Protecta harnesses are colour-coded in two tones to make it easier to distinguish the lower and upper parts of the harness. All stitching is in contrasting Polyamide thread. All products comply with relevant European standards and therefore carry the CE mark.

WHS451

## Protecta Sanchocs

Sanchoc is a textile energy-absorbing system designed to arrest the fall of an individual in free-fall by the impact to a level below that of the current European Standard EN 355. Sanchoc allows the anchor point to be below the user. The system comprises two polyamide straps woven together in a single weave, which tear apart gradually until the fall is arrested. This tear strap is sewn to a second polyamide safety strap forming a loop on each side of the Sanchoc.

The minimum clearance below the anchor point must be a minimum of 6 metres. The unit must be connected to the Dorsal D-ring of the Protecta harness.

By design the Sanchoc unit is designed for one fall arrest only.

WHS452

## Protecta Fall Arrest Blocks

Fall arrest blocks are anchored to a point above the user and to the rear dorsal D-ring of the Protecta harness. They are designed for use whilst working on vertical, horizontal or inclined planes.

Their robust design allows them to continue the safety of the user even after a fall. It is essential that the strength of the anchor point as well as the risks of pendulum effects are considered before using a self-retracting fall arrest system.

WHS453

## Fall Arrest Kits - 2 Man

PROTECTA INTERNATIONAL

- Basic fall arrest kit for 2 operators
- Must be used with at least 6m free space below anchor point
