General description
The $\mathbf{S} 10$ is a complete programme of illuminated pushbutton switches for front panel mounting (panel cutout 16 mm dia).
Lenses are available in the following forms: rectangular $18 \times 24 \mathrm{~mm}$, square $18 \times 18 \mathrm{~mm}$ and round 18 mm dia.
The standard design protects the front of the switches against accidental operation.
The pushbutton switches can be fitted with a device to prevent accidental twisting. The switches have snap action elements and are available with 1-4 contact blocks.
Gold-plated contacts are standard and are suitable for both, low-current use and standard applications.
Each contact block can be used as N/C or N/O or change-over contact (for change-over contact ext. connection between terminals 2 and 4). Contacts in one section must have the same polarity.
The 4 tin-plated terminals of each block are absolutely flux-proof. The lenses of the S10 range are available in 11 different colours and can be illuminated either by midget-groove T $1^{3 / 4}$ incandescent lamps or LED's.
The switching positions of the alternate version of the pushbutton switches are always indicated by the position of the lens.
When using neon lamps with external resistor $\leq 250 \mathrm{~V} \sim$, please consider relevant standards and approvals.
