ABB SACE and its commitment to protecting the environment

ABB SACE is one of the forerunners among the companies in the Group in dedicating considerable resources towards reaching its objectives of sustainable development and environmental protection. This is confirmed by the fact that all the company manufacturing sites have been awarded ISO 9001 quality certification and most of them have also been awarded ISO 14001 environmental management system certification. The plants in Frosinone and Patrica have also been awarded the Quality, Environment and Safety Integrated System certification and are certified in compliance with the BS 8800 Standards for health and safety in the workplace.

ABB SACE is actively involved in continuing the policy of improving environmental management by rationalizing the consumption of raw materials and energy, preventing pollution, respecting water and air, reducing noise levels to a minimum, reducing waste from production processes and carrying out periodic environmental checks at the main suppliers' premises.

By using analysis tools such as LCA (Life Cycle Assessment), from the initial design stages ABB SACE assesses and improves the environmental performance of its products throughout their entire life cycle in order to guarantee maximum efficiency in technical and energy performance during operation, control and reduce environmental impact in the manufacturing stage and define end-of-life procedures.

All these goals and activities are the result of a far-sightedness in adopting ecological policies and methods of reducing environmental impact and, here too, ABB SACE is, as already seen in the quality of its products, a leader on the Italian company scene.

Plant in Marostica (Vicenza-Italy)

Characteristics of Gemini switchboards 1/2

Introduction

Characteristics of Gemini switchboards

Gemini, something completely different in switchboards

ABB SACE's Gemini range is revolutionizing the market of low voltage electric insulating switchboards.

The reason for this is that it is the first switchboard made in thermoplastic material, to which the co-injection molding technique gives the same mechanical characteristics as polyester. This means that it is extremely sturdy, with its rigid covering and expanded internal core. Moreover, it contains no fiberglass, a material that with time rises to the surface, jeopardizing the functioning and safety of switchboards made in polyester with which it is usually mixed.

Gemini switchboards have IP66 degree of protection (IP40 with the door open and with the appropriate components installed) and a very high resistance to chemical and atmospheric agents. This is the reason why Gemini guarantees excellent performances even in particularly severe operating conditions.

Strong outside and versatile inside, Gemini is fit for all applications

There are as many configurations as there are ABB devices for low voltage automation and distribution: moulded-case circuit breakers, modular circuit breakers, monitoring, control and signaling devices, wiring ducts and electrical connection systems.

All of these components give the "Gemini system" an enormous range of ad hoc solutions that are easy to assemble with the snap-on system.

1SLCB0503F0001

Gemini switchboards are made with co-injection, which ABB SACE is the first manufacturer in the electric field to use as a molding technique. This process obtains a "sandwich" of two materials with a compact external covering and an expanded core, guaranteeing the highest level of mechanical protection against impacts (IK10) without the need to add hardening substances.

Polyester is usually mixed with fiberglass, which, with wear, rises to the surface and can become a risk factor for skin burns that may occur during installation and maintenance and accidental contact.

Moreover, it causes deterioration of the technical strength and lasting characteristics of the material to which it is added: Gemini, on the other hand, keeps its mechanical characteristics in the long term.

The co-injection technique makes the manufacturing operations themselves safe because the products are completely finished when they come out of the mold without any flash or other surface irregularities.

1SLCB0503F0001

Introduction

Characteristics of Gemini switchboards

Nothing can be compared with Gemini, even when the switchboards have reached the end of their life cycle: they are totally ecologically compatible. The material used to manufacture them is 100% recyclable. Polyester, on the other hand, cannot be recovered.

Moreover, to make sure that correct disposal procedures are followed, instructions are provided about how to identify materials and what to do with the product once it has served its useful purpose.

Quality and safety

ABB's Gemini is designed and built in compliance with reference Standards that define its constructional and functional characteristics.

In particular, the IP66 degree certifies that Gemini is totally protected against the infiltration of solid bodies and is resistant to the penetration of jets of water similar to sea waves.

Absolute protection is provided by double insulation even in the event of indirect contact. Rated uninterrupted current can reach a threshold of 400 A.

Even in very difficult application circumstances, Gemini gives high-level performances, with resistance to fire and abnormal heat up to a temperature of 750 °C and a functioning temperature from -25 °C to 100 °C. Moreover, the material with which it is manufactured retains its characteristics for a long time since it is not subject to corrosion by chemical or atmospheric agents. Also it does not turn yellow when exposed to UV rays.

1SLC89604MF0001

Gemini is made in a thermoplastic material that has a very low halogen content and is 100% recyclable. The environmental compatibility of Gemini is an important objective right from the design phase where the Life Cycle Assessment (LCA) procedure, defined in 1990 during the Society of Environmental Toxicology and Chemistry Conference (Vermont, USA), is followed. Life Cycle Assessment is an objective method for analyzing the energy and environmental loads relating to a product, process or activity, carried out by identifying and quantifying energy, the materials used and emissions released into the environment. Divided into four phases, the assessment covers the entire life cycle of the product, process or activity, from the extraction and transformation of raw materials to manufacturing and distribution, and from usage to recycling and decommissioning.

1SLC89604MF0001

Introduction

Characteristics of Gemini switchboards

A switchboard that is not just one system, but three

Gemini is the result of design work conducted by ABB with the direct collaboration of switchboard manufacturers, installers and designers who considered versatility to be the discriminating element when purchasing a switchboard, equally as important as sturdiness and reliability.

Gemini fulfils this requirement by providing a product that can be used for three different purposes: in addition to the basic configuration it also provides the components necessary for equipping it as an automation switchboard or as a distribution and mixed switchboard.

In all applications, compatibility with ABB protection, control and monitoring products means that a real system of integrated and complementary functions can be configured.

Typical examples of some Gemini applications can be seen in installations in industrial production departments and on board machines, in galvanization plants and varnishing cabins, in petrol stations and car-washing plants, boiler-rooms, car parks, shopping malls and in any other environments where distribution and automation demand specific safety requirements and service continuity. Gemini also has flexible measurements, with six different box sizes and internal space to accommodate from 24 to 216 DIN modules.

To respect safety standards, all the switchboard's components can be fixed to the base plate or to the box frame without ha-

1SLC86007F0001

Written in full, its name "Protect IT Multipurpose Box Gemini" says that no switchboard is more reliable. Integration of Gemini with other ABB low voltage protection, monitoring and control products fulfils the objective of offering the market a complete range of products and systems.

In particular, IndustrialIT is the solution ABB has developed for integrating company activities at all levels, in which each product is seen as one element of a single solution. Products and technologies are grouped into functional suites, each of which measures, monitors, optimizes and supports a specific

"block" of activities, interacting in a coordinated manner thanks to the platform created by ABB (AIP: Aspect Integrator Platform).

Not only are all the certified products interactive, but they also ensure that all the information needed to operate them is readily available in the latest edition: technical characteristics, installation, user and maintenance instructions, environmental certificates and declarations.

More information is given in the section entitled Products and services/IndustrialIT on the ABB website www.abb.com

IndustrialIT
enabled™

ving to use any tools; wiring is carried out from the front followed by snapping the base plate or the frame onto the box. The patented frame is fitted with the cable duct incorporated in the uprights.

In its design, Gemini repeats the shapes and RAL 7035 grey color of the ArTu switchboards with which it can be configured as a main protection switchboard.

Experience and innovation

Gemini has two central aspects. It is both the result of years of work in the production of installation material and the expression of the most advanced technology, from design to distribution.

In the laboratory, computer-

aided design programs simulate all types of application conditions translating virtual checks into a process to improve the performances of Gemini so that it will be able to respond more accurately to market requirements.

Characteristics

PROTECTION ▶ IP66 (IEC EN 60529)
Class II insulation

STRENGTH ▶ Thermoplastic material moulded in co-injection
Resistance to abnormal heat and fire up to a temperature of 750 °C (IEC EN 60695-2-1)
IK10 (IEC EN 50102) degree of resistance to impacts
Protection against chemical and atmospheric agents (water, saline solutions, acids, basic agents, mineral oils, UV rays)
Operating temperature -25 °C ÷ +100 °C

PERFORMANCE ▶ Rated uninterrupted current up to 400 A
Rated service voltage up to 690 V

FLEXIBILITY OF USE ▶ 6 sizes from 335x400x210 mm to 840x1005x360 mm (WxHxD, external dimensions)
DIN 24 to 216 modules

INSTALLATION-FRIENDLY ▶ Snap-on mounting of all components in compliance with safety Standards

QUALITY AND ENVIRONMENT ▶ Compliance with international reference Standards EN 50298, EN 60670, EN 60439-1
IMQ mark according to Standard EN 50298
100% recyclable

Order codes

Basic configurations

In the basic configuration, Gemini switchboards are composed of boxes in six different sizes ranging from 335x400x210 mm to 840x1005x360 mm (WxHxD, external measurements) and with opaque or transparent doors.

In both versions, the doors are reversible and clip onto the hinges without the need to use

tools; the fact that they open at an angle of more than 180° means that it is easy to work on the components installed inside the switchboard. The seal applied by extrusion along the sides of the doors guarantees IP66 degree of protection. Access to the inside of the switchboard is protected by a standard double bit lock that can be

replaced by locks of another type available in the accessories.

Boxes and doors can be requested either separately or as combined "box + door" codes, to make filling out the order form more flexible.

Inside the packages, the door is always wrapped separately and inserted inside a pocket

that protects it from accidental damage until wiring is completed and the switchboard is installed.

Hole-cover plugs to guarantee IP protection and double insulation for wall mounting are also supplied with the pack together with the instruction sheet.

1SLC88601ZF0001

Gemini doors open at an angle of more than 180° giving easy access to the devices installed inside the switchboard.

1SLC88601ZF0001

No tools are needed for installation. The doors hook onto the hinges with special hinge pins and are reversible.

1SLC88601ZF0001

The special structure of the inner perimeter of the box ensures further protection against the penetration of water. The box is supplied with a spirit level.

Components for automation applications

Gemini switchboards are designed to be perfectly compatible with ABB components for low voltage control and monitoring.

For these applications they can be equipped with modular devices belonging to the System pro *M* range, with Tmax moulded-case circuit-breakers and control and signaling devices, creating a truly integrated automation system.

When deciding the Gemini layout for control and monitoring

applications, not only is it possible to select the box and door in the required size, but you can also select the base plate in one of the three versions in the range.

After wiring with the ducts and the Fix-O-Rapid device, the special standard adjustable feet and hooks must be fitted onto the base plate, allowing it to be inserted inside the box at up to seven different depths and three further levels of adjustment: no tools need to be used

to carry out these operations.

To finish the job, the inner door can be mounted (reversible and in insulating material), guaranteeing IP40 degree of protection when the switchboard door is open.

No tools are needed unless the inner door is equipped with buttons, warning lights, etc.

The fixing hooks and feet supplied in the standard versions are applied without having to use tools, making it possible to install the base plate at seven different depths inside the switchboard. They can also be adjusted at three further positions.

2

Application of the inner door guarantees IP40 degree of protection when the switchboard door is open.

The base plate can be snap-mounted inside the switchboard.

Example of the configuration of a switchboard for an automation application: some ABB control and protection devices are installed on the plate. The inner door is fitted with light-signaling devices.

------	-------------	----------------------

Fix-O-Rapid

Rapid mounting device for attaching wiring ducts to the base plate: it snaps onto the plate after drilling a $\varnothing 7$ mm hole. Two Fix-O-Rapid devices are enough for each wiring duct section. Fix-O-Rapid guarantees maximum insulation since it does not involve the use of any metal component inside the wiring duct.

If the wrong wiring duct is selected, it can be dismantled and a version with the same base and a different height can be attached to the Fix-O-Rapid.

Components for distribution and mixed applications

In distribution and mixed applications, the Gemini switchboard is designed to be fitted with System pro *M* modular devices and Tmax moulded-case circuit breakers.

The frame is the load-bearing element of the configuration: DIN rails, partial modular plates and the special Tmax mounting and cabling kits are snapped onto the uprights. All the components can be adjusted to six different depths with a pitch of 12.5 mm and arranged at heights with a distance of 75 mm between the rows.

Blank or drilled front panels are applied to protect the equipment and these can be hinged onto both sides; the cables are housed inside the vertical wiring duct integrated in the uprights according to an exclusive ABB patent.

Wiring is carried out by pulling out the frame and working from the front; the ergonomic grip and the standard feet and snap-on hooks supplied make it easy to insert it inside the switchboard after the job is finished.

The frame can be extracted to make wiring operations easier at the workbench.

The DIN rail is supplied with special hooks already in position for attaching to the uprights.

The depth at which the DIN rail, the modular plates, the kit for fixing the Tmax circuit breakers and the wiring duct are positioned can be adjusted with a simple sliding movement.

Fixing hooks and feet allow the frame to be snap-mounted inside the box.

The blank and drilled panels are hinged onto both sides; the description of the installed components can be kept in the special compartment protected by a transparent, hinged flange.

The upright with the incorporated wiring duct is an exclusive ABB patent that rationalizes the path of cables inside the switchboard.

Kit for installing Tmax moulded-case circuit breakers

- For installing Tmax moulded-case circuit breakers in fixed version with front terminals
- Composed of a plate with special drilled holes and a protection panel with vertical slots that can be hinged on both sides and snap-on mounted (in compliance with reference Standards a tool must be used for removing the panel)
- Available for sizes 2-6
- Version H 150 with drillings for Tmax T1 3 poles (with and without residual current releaser), Tmax T1 4 poles (with and without residual current releaser), Tmax T2 3 poles (with and without residual current releaser), Tmax T2 4 poles (without residual current releaser)
- Version H 300 with drillings for Tmax T2 4 poles (with residual current releaser), Tmax T3 3 poles (with and without residual current releaser), Tmax T3 4 poles (with and without residual current releaser)
- Snap-on mounting onto uprights with the possibility of adjusting the plate depth

Accessories

Gemini switchboards have the same accessories for both automation and distribution applications, ensuring maximum versatility and integration of functions.

In particular, the ventilation and anti-condensation kits make it even safer for the devices to run, protecting them from the effects of heat and humidity while the wall brackets, pole mounting kit

and pedestal make it easier to install the switchboards in any context.

Three different kinds of locks are supplied for the doors with which it is possible to replace the standard double bit model. The universal drill bit can be used to open the side branch connections. Module covers hide the unused modules of the DIN rail guaranteeing IP40 protection

when the door is open in distribution and mixed configurations.

1SLC865027F0001

1SLC865028F0001

Gemini wall-mounted installation using the special mounting brackets.

2

1SLC865029F0001

1SLC865065F0001

The standard locks supplied can be replaced by the version with ciphered key and handle or with square or triangular impression.

1SLC865066F0001

The fact that Gemini switchboards can also be pole-mounted (see photo above) or mounted on a special pedestal (see photo at the side) makes them suitable for any application situation.

Compliance with Standards and technical characteristics

Reference Standards

Standard CEI EN 50298 ("Empty enclosures for low voltage switch-gear and control gear assemblies. General requirements.") is the prescriptive reference for Gemini switchboards.

The object of Standard CEI EN 50298 is to formulate definitions, classifications, characteristics and test prescriptions for cases designed to be used as part of protection and operating equipment (switchboards) in compliance with the Standards of the EN 60439 series, that have a maximum rated voltage of 1000 V in alternating current for maximum frequencies of 1000 Hz or 1500 V in direct current and are suitable for general use in both internal and external applications. The Standard applies to empty enclosures, before the user has installed protection and operating devices inside them.

The Standard does not apply to enclosures with structural and functional characteristics that make them subject to other prescriptions (e.g. cases for domestic installations and the like). In this case Standards IEC 60670 – CEI 23-48 ("General requirements for enclosures for accessories for household and similar fixed electrical installations") and CEI 23-49 ("Enclosures for accessories for household and similar fixed electrical installations. Part 2: particular requirements for enclosures for protection devices and accessories dissipating a considerable power in normal use") apply.

On the basis of the indications of the ABB SACE technical characteristics' table, the installer may have to certify compliance with Standards CEI 23-51 – EN 60439-1 – CEI 17-13-1 ("Part 1: standard equipment subject to type tests – AS – and non-standard equipment partially subject to type tests – ANS).

- Rated impulse withstand voltage	8 kV	8 kV	8 kV	8 kV	8 kV	8 kV
Short circuit withstand (par. 8.2.3)						
- Rated peak short-circuit current	-	-	-	-	-	-

⁽¹⁾ Maximum dissipation power data was obtained following the indications of **Standard CEI 23-49**, with a temperature difference of $\Delta t=30$ °C.

⁽²⁾ **Note to paragraph 8.2.1 of Standard CEI EN 60439-1**

The table gives the thermal dissipation values of Gemini switchboards when they are wall-mounted. The dispersible power figures (in Watts) vary according to the overtemperature allowed in the accessible parts of the switchboard and must be compared with the total amount of power dissipated by all the components installed inside the switchboard taking into due account the factor of contemporaneity.

Technical information

IP degree of protection

IP degree of protection

As indicated in the following table, the IP degree of protection is expressed by two characteristic numbers depending on the behavior of the product to which it refers according to the prescriptions

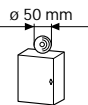

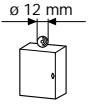

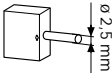

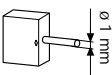

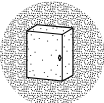

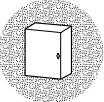

of CEI 70-1 and IEC 529 Standards.

With IP66 degree of protection, Gemini switchboards are totally protected against the penetration of dusts and sprays of seawater.

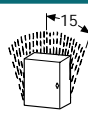

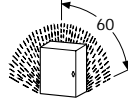

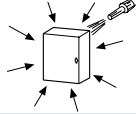

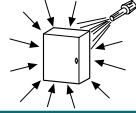

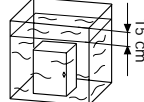

First number: protection against the penetration of solid bodies

Second number: protection against the penetration of water

3

IP		
0		No protection
1		Protection against the penetration of solid bodies with a diameter of over 50 mm
2		Protection against the penetration of solid bodies with a diameter of over 12 mm or a length of over 80 mm
3		Protection against the penetration of solid bodies with a diameter or thickness of over 2.5 mm
4		Protection against the penetration of solid bodies with a diameter or thickness of over 1.0 mm
5		Protection against the penetration of dusts
6		Total protection against the penetration of dusts

1st number defined by Standards CEI 70-1 – IEC 60529

IP		
0		No protection
1		Protection against the penetration of drops of water falling vertically
2		Protection against the penetration of drops of water falling at an angle of up to 15° from vertical
3		Protection against the penetration of drops of water falling at an angle of up to 60° from vertical
4		Protection against the penetration of splashes of water from all directions
5		Protection against the penetration of water sprayed by a hose from all directions
6		Protection against the penetration of sea water
7		Protection against the penetration of water during temporary immersion
8		Protection against the penetration of water during continual immersion

2nd number defined by Standards CEI 70-1 - IEC 60529

1SLC806041F0001

Technical information

IK degree of resistance to impacts

IK degree of resistance to impacts

The IK degree is expressed in Joules in compliance with Standard CEI EN 50102.

IK 00	 <p>No protection against impacts</p>	IK 06	 <p>Resistance to impacts with impact energy up to 1.00 J</p>
IK 01	 <p>Resistance to impacts with impact energy up to 0.150 J</p>	IK 07	 <p>Resistance to impacts with impact energy up to 2.00 J</p>
IK 02	 <p>Resistance to impacts with impact energy up to 0.200 J</p>	IK 08	 <p>Resistance to impacts with impact energy up to 5.00 J</p>
IK 03	 <p>Resistance to impacts with impact energy up to 0.350 J</p>	IK 09	 <p>Resistance to impacts with impact energy up to 10.00 J</p>
IK 04	 <p>Resistance to impacts with impact energy up to 0.500 J</p>	IK 10	 <p>Resistance to impacts with impact energy up to 20.00 J</p>
IK 05	 <p>Resistance to impacts with impact energy up to 0.700 J</p>		

Technical information

Double insulation and self-extinguishing tests

Double insulation

Double insulation guarantees that Gemini is protected against indirect contacts on condition that the manufacturer's instructions are observed when carrying out mounting and wiring operations on the switchboard and that the appropriate accessories are used (e.g. screw-cover caps).

Double insulation is indicated by the graphic symbol 

Self-extinguishing tests

Technical information

Integration with ABB products

Unifix L fast wiring system

Unifix is the system patented by ABB for the fast and safe wiring of equipment in the System pro *M* range and Tmax and Isomax moulded-case circuit breakers. It is available in three versions, of which Unifix L is the one most suitable for installing in Gemini switchboards with rated currents of up to 100 A and short-circuit currents of up to 25 kA.

Unifix L is composed by assembling its components listed in the following tables that should be referred to when ordering.

The busbars are housed in a system of ducts with a capacity of 100 A and short-circuit current of 25 kA. They are supplied in two and four-pole versions with from 12 to 32 modules. They snap onto the back of the DIN rail.

Code	Description	Pack/Pieces
ED2993	Busbar 100 A, 2 poles, 12 modules	1/6
ED3009	Busbar 100 A, 2 poles, 18 modules	1/6
ED3017	Busbar 100 A, 2 poles, 24 modules	1/6
ED3025	Busbar 100 A, 2 poles, 36 modules	1/6
ED2944	Busbar 100 A, 4 poles, 12 modules	1/6
ED2951	Busbar 100 A, 2 poles, 18 modules	1/6
ED2969	Busbar 100 A, 4 poles, 24 modules	1/6
ED2977	Busbar 100 A, 4 poles, 36 modules	1/6

Connections are made in copper, cut to size and bent to allow power supply between the terminals of the modular System pro *M* devices and the Unifix system busbars. They are supplied in the versions L1, L2, L3, N and 1p+N depending on the polarity of the device to be wired.

Code	Description	Pack/Pieces
ED3355	Connections with 2 cables, 40 A	1/6
ED3363	Connections with 3 cables, 40 A	1/6
ED3371	Connections with 4 cables, 40 A	1/6
ED3074	Connections 1P+N, 40 A, for DS 121, 1 mod.	1/10
ED3272	Connections L1-N, 40 A, for S9..1N with neutral on the right	1/10
ED3280	Connections L2-N, 40 A, for S9..1N with neutral on the right	1/10
ED3298	Connections L3-N, 40 A, for S9..1N with neutral on the right	1/10
ED3033	Connections L1, 100 A	1/10
ED3041	Connections L2, 100 A	1/10
ED3058	Connections L3, 100 A	1/10
ED3066	Connections N, 100 A	1/10

Feeder modular devices are available with and without cable. Modular devices with cable have a capacity of 36 A and 2-module dimensions; they are supplied in two and four pole versions. Modular devices with cable have a capacity of 100 A and 1-module dimensions; they are supplied in the L1, L2, L3 and N version. Both modular devices connect to the conductors feeding the busbars directly when installation of the main line switch is not envisaged.

Code	Description	Pack/Pieces
ED3082	Feeder modular device with cable, 63 A, 2 poles, L 250 mm	1/6
ED3090	Feeder modular device with cable, 63 A, 4 poles, L 250 mm	1/6
ED3405	Feeder modular device with cable, 63 A, 4 poles, L 400 mm	1/6
ED3413	Feeder modular device with cable, 63 A, 4 poles, L 800 mm	1/6
ED3439	Feeder modular device with cable, 63 A, 4 poles, L 1500 mm	1/6
ED3101	Feeder modular device without cable, 100 A, L1	1/10
ED3102	Feeder modular device without cable, 100 A, L2	1/10
ED3103	Feeder modular device without cable, 100 A, L3	1/10
ED3104	Feeder modular device without cable, 100 A, N	1/10

Uni-polar feed terminals are available in 63 A and 100 A versions. They connect directly to the front terminals on the modular circuit breakers feeding the busbars through the main line switch. They are designed for the connection of a conductor with a 32 mm² and 25 mm² section respectively

Code	Description	Pack/Pieces
ED3100	Terminals for 100 A feed for 35 mm ² cable	1/10
ED3140	Terminals for 63 A feed for 25 mm ² cable	1/10

Disposal instructions

Information about how to dispose of Gemini switchboards when they reach the end of their life

Instructions are given below about the procedures to adopt when disposing of Gemini switchboards at the end of their life cycle. The text is drafted in the form of a table referring to Standard CEI 308-1 "Information table concerning the end of life of electric and electronic products and a compilation guide", 2002-04, ed. 1, pamphlet number 308-1 6454.

Section I - Global product specification

Name Size	Type of product		Rated weight (kg)	External dimensions WxHxD (mm)
	With transparent door	With opaque door		
1	1SL0211A00	1SL0201A00	4,3	335x400x210
2	1SL0212A00	1SL0202A00	7,9	460x550x260
3	1SL0213A00	1SL0203A00	9,5	460x700x260
4	1SL0214A00	1SL0204A00	12,0	590x700x260
5	1SL0215A00	1SL0205A00	17,8	590x855x360
6	1SL0216A00	1SL0206A00	21,1	840x1005x360

Technical information

Disposal instructions

Section III - Components to be removed from the product and sent for separate treatment

Refer to section II of the table for a description of the materials.

Notes for recovery and disposal

At the end of its life, after separating it from components, the product can be sent to be recovered.

The product is not biodegradable: do not dispose of it in the environment.

The product/waste product is assimilable as solid urban waste. It must be incinerated or disposed of in compliance with current EEC, national and local regulations. You are recommended to check all reutilization possibilities.

Other recommendations

The information in this table relates to the product in the condition it was supplied. Assembled parts coming from different supplies must be treated separately according to the reference specifications of the respective manufacturers.

3

Section IV - Safety instructions

Handling

No special instructions. Refer to the general regulations concerning hygiene on the workplace when using.

The product's main components contain mineral additives and coloring agents in concentrations that comply with current European Directives at the time this catalogue went to press: they do not contain substances classified as dangerous.

Transport

No special instructions.

Storage

No gas or harmful vapors are released during storage. Thermal decomposition in the event of fire or combustion may release dangerous products: if this should occur, specific means of protection must be used. In the event of fire, conventional fire extinguishing instruments are recommended (atomized water, foam, carbon dioxide, powder).

Empty packages are not contaminated by the product and can therefore be recycled or reused.

Utilization

No special instructions.

Other instructions

The information given in this section is based on current ABB SACE know-how and is aimed at describing the product only for environmental, health and safety purposes. It must not, therefore, be considered as a guarantee of specific properties. ABB SACE assumes no responsibility for the behavior of buyers that do not comply with the information given in this table and for incorrect or improper usages of the product or usages that cannot reasonably be envisaged.
