CHEMI-CON

THC
MULTILAYER CERAMIC

- Y5U Ceramic
- Surface Mount
- High CV
- Low ESR
- High Rated Ripple Current
- +125°C Maximum Temperature

The THC series is a very high CV value multilayer ceramic chip capacitor series that is designed for use in DC-DC converters, switching power supplies, bypass or decoupling circuits, or as a noise suppressor for various types of equipment. These surface mount chips have a wide capacitance range, low impedance and a Y5U temperature coefficient which allows for the high CV values. The THC series also has excellent high frequency characteristics due to low ESR, high ripple current capability, superior humidity tolerance, and a life expectancy of 1,000 hours at +125°C. The voltage range has been upgraded to include new 200 volt products. All of the THC capacitors are available with either silver termination or nickel barrier solder or tin plating termination.

Summary of Specifications

- Surface mount lead terminals.
- Capacitance range: 0.047 to 47 μ F.
- Voltage range: 25 to 200VDC.
- Category temperature range: -55°C to +125°C.
- Standard capacitance tolerance: $\pm 20\%$ or $-20\% \text{ to } +80\%$
- Nominal case size (L \times W \times H): 2.0 \times 1.25 \times 1.25mm to 7.5 \times 6.3 \times 3.0mm.
- Rated lifetime: 1,000 hours at +125°C.

THC Specifications

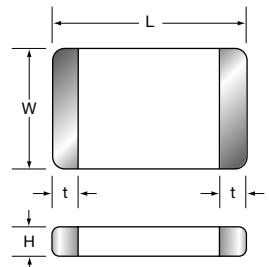

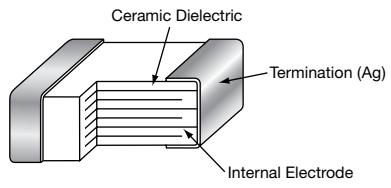

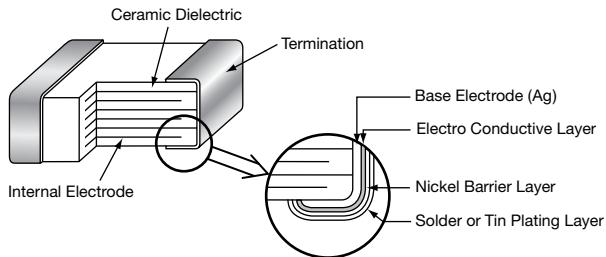

Item	Characteristics															
Category Temperature Range	−55 to +125°C															
Rated Voltage Range	25 to 200VDC															
Capacitance Range	0.047 to 47μF															
Capacitance Tolerance	$\pm 20\%$ (M) or -20% to $+80\%$ (Z) at $+20 \pm 2^\circ\text{C}$, $1 \pm 0.1\text{kHz}$, and $1 \pm 0.2\text{Vrms}$															
Dissipation Factor (Tan δ)	5% maximum at $+20 \pm 2^\circ\text{C}$, $1 \pm 0.1\text{kHz}$, and $1 \pm 0.2\text{Vrms}$															
Rated Ripple Current	At $+125^\circ\text{C}$, the rated ripple current at 10kHz-1MHz is specified in the Ratings Tables. Note: Ripple voltage V_p shall be less than the rated voltage.															
Withstand Voltage	No abnormality after applying 250% of the DC rated voltage for 5 seconds at $+20 \pm 2^\circ\text{C}$.															
Insulation Resistance	$1,000 \div C_R^* = M\Omega$ or $10,000M\Omega$, whichever is less, after applying the DC rated voltage for 60 ± 5 seconds at $+20 \pm 2^\circ\text{C}$.															
Solderability	Using eutectic solder containing Ag 2.5-3wt% at a solder temperature of $+235 \pm 5^\circ\text{C}$ and a dip time of 2 ± 0.5 seconds, a minimum of 75% of the surface of the terminals shall be covered with new solder.															
Soldering Heat Resistance	Using eutectic solder containing Ag 2.5-3wt% at a solder temperature of $+260 \pm 5^\circ\text{C}$ and a dip time of 2 ± 0.5 seconds, the following specifications shall be satisfied when the capacitors are restored to $+20^\circ\text{C}$. Appearance : no visible damage Capacitance change : $\leq \pm 15\%$ of initial measured value Tan δ (DF) : \leq initial specified value Insulation resistance : $1,000 \div C_R^* = M\Omega$ or $10,000M\Omega$, whichever is less (initial specification) Withstand voltage : no abnormality															
Temperature Cycle	The following specifications shall be satisfied when the capacitors are restored to $+20^\circ\text{C}$ after exposing the capacitors to the four-step temperature cycle shown below for 5 cycles without voltage applied. <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: center;">Step</th> <th style="text-align: center;">Temperature (°C)</th> <th style="text-align: center;">Time (minutes)</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">1</td> <td style="text-align: center;">Min. Category Temperature: $-55 \pm 3^\circ\text{C}$</td> <td style="text-align: center;">30 ± 3</td> </tr> <tr> <td style="text-align: center;">2</td> <td style="text-align: center;">Room Temperature</td> <td style="text-align: center;">3 max.</td> </tr> <tr> <td style="text-align: center;">3</td> <td style="text-align: center;">Max. Category Temperature: $+125 \pm 2^\circ\text{C}$</td> <td style="text-align: center;">30 ± 3</td> </tr> <tr> <td style="text-align: center;">4</td> <td style="text-align: center;">Room Temperature</td> <td style="text-align: center;">3 max.</td> </tr> </tbody> </table> Appearance : no visible damage Capacitance change : $\leq \pm 15\%$ of initial measured value Tan δ (DF) : \leq initial specified value Insulation resistance : $1,000 \div C_R^* = M\Omega$ or $10,000M\Omega$, whichever is less (initial specification) Withstand voltage : no abnormality	Step	Temperature (°C)	Time (minutes)	1	Min. Category Temperature: $-55 \pm 3^\circ\text{C}$	30 ± 3	2	Room Temperature	3 max.	3	Max. Category Temperature: $+125 \pm 2^\circ\text{C}$	30 ± 3	4	Room Temperature	3 max.
Step	Temperature (°C)	Time (minutes)														
1	Min. Category Temperature: $-55 \pm 3^\circ\text{C}$	30 ± 3														
2	Room Temperature	3 max.														
3	Max. Category Temperature: $+125 \pm 2^\circ\text{C}$	30 ± 3														
4	Room Temperature	3 max.														
Humidity Load Life	The following specifications shall be satisfied when the capacitors are restored to $+20^\circ\text{C}$ after applying the DC rated voltage for $500+24,-0$ hours at $+40 \pm 2^\circ\text{C}$, 90-95% RH. Appearance : no abnormality Capacitance change : $\leq \pm 20\%$ of initial measured value Tan δ (DF) : $\leq 7\%$ Insulation resistance : $50 \div C_R^* = M\Omega$ or $1,000M\Omega$, whichever is less Withstand voltage : no abnormality															
Endurance (Load Life)	The following specifications shall be satisfied when the capacitors are restored to $+20^\circ\text{C}$ after applying 200% of the DC rated voltage for $1,000+48,-0$ hours at $+85 \pm 2^\circ\text{C}$, or $1,000+48,-0$ hours at $+125 \pm 3^\circ\text{C}$ with the initial DC rated voltage applied. Appearance : no abnormality Capacitance change : $\leq \pm 20\%$ of initial measured value Tan δ (DF) : $\leq 7\%$ Insulation resistance : $100 \div C_R^* = M\Omega$ or $1,000M\Omega$, whichever is less Withstand voltage : no abnormality															

* C_R = Rated Capacitance in μF

Flow Soldering Profile*

*Flow soldering for THCS case codes 20, 30, 40, 50 only.

Part Numbering System for THC Series When ordering, always specify complete catalog number for THC Series.

THC	S	70	E	1E	336	Z	T	F
Terminal Plating (THCS only): F = Tin Plating; Blank = Solder Plating.								
Taping Code: 7" reel is standard.								
Capacitance Tolerance: M = ±20%; Z = -20% to +80%								
Capacitance Value: Expressed in Picofarads. The first two digits are significant figures, and the third digit indicates the number of zeros following these figures (e.g. 336 = 33,000,000pF = 33μF).								
Voltage Code: 1E = 25VDC; 1H = 50VDC; 2A = 100VDC; 2D = 200VDC								
Temperature Coefficient: E = Y5U.								
Case Code: Refer to dimensions section for standard case sizes.								
Termination: R = silver (reflow); S = solder or tin plating (flow/reflow). Note: THCS60 and THCS70 are for reflow only.								
Series Name: Indicates basic capacitor design.
