

Introduction: DIPLOMAT Cases, Towers and Caseframes

DIPLOMAT 19" AND 10½" CASES

DIPLOMAT 19" and 10½" cases are designed for the direct mounting of subracks and chassis to IEC 297-1 and DIN 41494. They are strong and lightweight, with inherent EMC protection due to their metal construction. They have also obtained an IP rating of 30. A new fan plinth design has improved the cooling performance of this unit significantly, results of which are published on page 4 of this brochure. A very large range of ex-stock sizes are available and can now be assembled to order and despatched with accessories fitted. Due to the nature of its construction, this unit is also easily customised, so please ask our Sales Office for more details.

DIPLOMAT 19" Cases

DIPLOMAT-RF 19" AND 10½" CASES

DIPLOMAT-RF 19" and 10½" cases are designed to suit applications requiring a higher level of EMC protection to shield sensitive electronic equipment.

The significantly higher level of protection is achieved by selectively placing BeCu fingers around joints in the enclosure to attain the level of EMC protection required. Because the fingers can be added or removed easily, the level of shielding may be altered to find the most cost-effective solution.

DIPLOMAT-RF 19" Cases

DIPLOMAT COMPUTER TOWERS

DIPLOMAT Computer Towers are designed for direct mounting of subracks or chassis and conform to IEC 297-1 and DIN 41494. The towers are available in two widths and can accept up to 12U of subracks or chassis. All units are supplied assembled.

DIPLOMAT Computer Tower

DIPLOMAT CASEFRAMES – EUROCARD COMPATIBLE

DIPLOMAT caseframes are designed for the direct mounting of circuit boards and modules to IEC 297-3, DIN 41494 Pt. 5 and BS 5954. They are available with EMC conversion kits which give high levels of attenuation. The basic unit however will also afford EMC protection due to its metal construction.

The cooling performance of this unit has also been improved, especially in the slot 1 region of VME systems, where hot cards are often situated. These units are supported by a range of accessories which increase its versatility and application environment. These units are also rated at IP30.

DIPLOMAT Caseframes

DIPLOMAT Case Cooling

NEW AND IMPROVED COOLING PERFORMANCE

The DIPLOMAT range of enclosures has improved cooling performance in both the standard and fan plinth versions. The fan plinth version has a wider plinth with an increased ventilation surface area to increase the volume of air flow. The plinth can either act as a chamber for air collection when fans are mounted on the rear panel of the unit (pull through air flow) or can be used to mount fans directly hence employing a push method of cooling. Fans can be mounted in the plinth and on the rear panel employing a push-pull method of cooling.

Ducting plates can be placed in the plinth to give additional direction to the air flow, concentrating the flow towards hot cards or components. The level of cooling performance achieved will depend on a number of variables, such as the internal component architecture and hot component positioning. A test was set up where a 6U DIPLOMAT unit 19" wide was fitted with a populated card frame, 220mm boards to a 6U full width backplane, and air flow indicating componentry. Two 95CFM fans were mounted on the rear panel and a standard ducting plate used to direct the air across the cards, the results recorded are shown below.

The results below were measurements of air velocity taken from the standard DIPLOMAT with new 38mm deep plinth with ducting plate, and 2 x 95 CFM fans mounted on the rear panel. The top panel was non ventilated.

DIPLOMAT Case EMC and IP Sealing

DIPLOMAT SHIELDING EFFECTIVENESS RESULTS

The shielding effectiveness results shown have been measured in APW's EMC test facility using a generic test procedure adapted for smaller enclosures.

Isolated from ambient electromagnetic interference within a screened room, magnetic and electric field signals are radiated at discrete frequencies inside the enclosure under test. Field strengths at positions around the enclosure are compared with equivalent control measurements to determine the signal attenuation by the enclosure at each frequency.

Shielding effectiveness may vary around the enclosure.

EMC PROTECTION

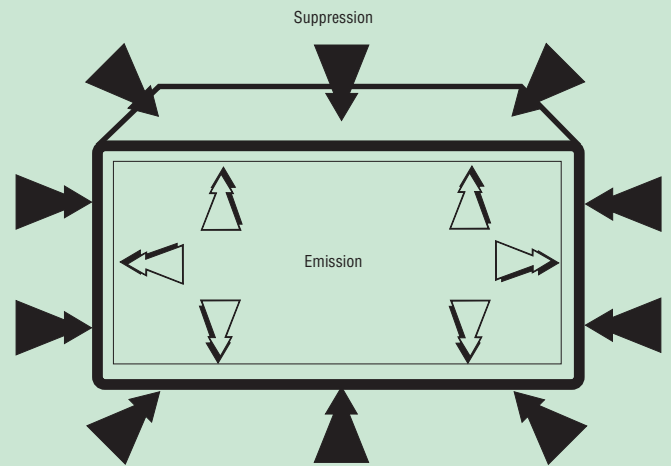

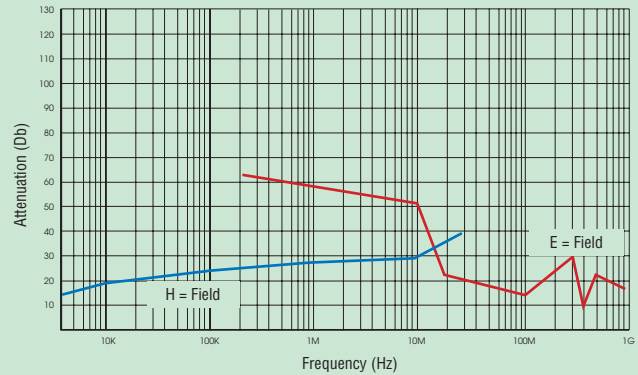

The graph shows typical attenuation figures achieved for a 3U 19" DIPLOMAT case, which has been fitted with standard front and rear panels. The performance achieved shows that in both the E and the H field the unit will provide fairly high levels of attenuation across a broad frequency band.

The DIPLOMAT range of enclosures have undergone a series of technical performance tests, conducted in accordance with MIL-STD 285, modified where necessary due to the nature of the enclosure. The results shown are worst case and units were not fitted with any additional metalwork. The performance of the units may be improved when internal chassis and EMC front panels are included.

IP PROTECTION

The DIPLOMAT range was also tested for the ingress of dust using a standard BSI probes. The unit passed a test which gives an IP rating of 30. The unit was not tested for the ingress of water.

SHIELDING EFFECTIVENESS FOR 3U x 422 DIPLOMAT 19" CASE

IP	3	0
INDEX OF PROTECTION	DUST PROTECTION	WATER PROTECTION

3	Protection against small foreign bodies	Protection of persons from touching active or internal moving parts with tools, or similar, thicker than 2,5mm. Protection of the object from access of solid foreign matter larger than 2,5mm in diameter.
0	No protection	No special protection

DIPLOMAT Cases: Overview and accessories index

A superb range of robust cases for direct mounting of 42HP or 84HP subracks and 10½" or 19" chassis to IEC 297-1 and DIN 41494.

Features

- Supplied assembled
- Superb modern styling
- Robust metal construction
- Conforms to IEC 297-1 and DIN 41494
- Quick release top and bottom covers
- Horizontal, vertical tower and plinth versions available.
- Front trims conceal 19" fixings
- Very large range of standard ex-stock sizes
- Easy customisation
- Painted in modern colour combination of light and mid grey to BS4800-00A01 and BS4800-00A05

APPLICATIONS

The DIPLOMAT 19" and 10½" cases are designed to provide stylish, robust, yet economical solutions for housing electronic systems.

The standard cases are ideal for 10½" or 19" (42HP or 84HP) equipment used in either office or industrial applications. Vertical tower versions are designed as floor standing units suitable for convenient positioning either under or next to a desk.

Items to be ordered as accessories

TRANSPARENT DOORS

Manufactured from strong yet lightweight materials this new transparent door design offers not only security but styling to the DIPLOMAT 19" enclosure.

All doors are lockable and allow sufficient space inside to mount components on front panels without causing interference. All doors are supplied with an integral colour highlight strip.

Flamability rating - BS476 class 3/UL94-HB

HEAVY DUTY CARRY HANDLE - 3U AND 4U CASES ONLY

This heavy duty handle is designed to visually coordinate with the DIPLOMAT cases. It is suitable for 3U and 4U cases and will accept loads of up to 300N. The handle has a press button mechanism which locks in increments of 30°. This allows the cases to be easily carried or tilted on a work surface. A template is supplied with the kit for easy drilling and to assist location in the side extrusions.

FEATURE FRONT PANELS

Available in addition to the range of standard 19" front panels, these are unique to the DIPLOMAT case. Manufactured in 3mm etched and anodised aluminium with a high quality surface finish they provide a clean and very attractive frontal appearance. They may be used both on the front and rear of the case and are fitted into the bezel in place of the trims, and in front of the 19" fixing facilities.

FRONT BEZEL TRIMS

These provide an attractive finish to the DIPLOMAT cases when the equipment has been installed. They are available in two versions; two-part highlighted and two-part plain.

The highlighted versions are mounted from the front of the unit for easy access and supplied with the standard highlight colour (Pantone green).

The plain version is mounted from the rear of the bezel, providing a clean fronted appearance and offering additional security.

10½" AND 19" REAR PANELS

These steel rear panels are available in two versions – standard ventilated or fan ventilated – and two widths to suit 10½" and 19" DIPLOMAT Cases. The top and bottom covers of the enclosure can be quickly removed without the need to remove any panels. This is achieved by the provision of holes in the rear panel to permit easy access to the cover securing screws.

The standard ventilated versions are supplied pre-punched with obround holes across the full width of the rear panel, providing a safe passage of air through the case.

The fan ventilated versions are supplied with pre-punched vent areas with the relevant fixing holes to mount 120mm square fans. These panels are particularly suited to applications requiring forced cooling to aid air throughput.

REAR BUMP DOWN FEET – 3U CASES ONLY

This useful bump down foot accessory allows portable instruments to be placed safely on rugged surfaces without causing damage to the unit itself. The foot assembly also acts as a cable wrap to conveniently store power cables. Access to the DIPLOMAT interior can be gained via securing screws in the foot moulding, which when unscrewed, will release the top and base covers. These are suitable for 3U units only.

Chassis tray kit

CHASSIS TRAY KIT – 19" CASES ONLY

A range of chassis trays are available which, when attached to the chassis support, provide a complete chassis assembly for mounting processor boards or other components.

A matrix of slots is provided in each tray so that it does not restrict airflow within the unit. This is especially important when used in a DIPLOMAT case with a ventilation plinth.
