## ARPAX

APL / UPL, 205 / 205D
Magnetic Circuit Protectors

## INTRODUCTION

The APL/UPL magnetic circuit protector provides reliable, low-cost power switching, circuit protection and circuit control. The handle opens and closes a circuit, under normal load conditions, similar to an ON-OFF switch. Upon overload, the internal mechanism trips, opens the contacts and forcibly returns the handle to the OFF position. Since the protector is "trip free," the internal contacts will not remain closed in the presence of an overload, even though the handle is held in the ON position.

The APL/UPL line offers many configurations including series, shunt and relay with a choice of delays and ratings. APL/UPL multi-pole assemblies are available with a mix of current ratings, delays and internal circuit configurations.

While designed for industrial, military and information processing applications, the APL is suitable for use in any situation where precision operation is required. Most versions of the APL family are recognized by UL 1077 as Supplementary Protectors and certified by CSA 22.2 No. 235 as Supplementary Protectorssignated with the UPL. Additionally, many versions of the UPL comply with the spacing requirements covered by IEC specifications 950 and 601 and VDE specifications 0642 (EN60934) and are VDE approved and CE Compliant. Please contact the factory for assignment of a part number.

## 205/295 Dust Sealed Protector

Combining the proven mechanism of the APL/UPL circuit protector with a unique case design, the 205 version provides increased voltage ratings plus a dust proof enclosure.

All openings in the case (including arc blowout vent and handle) have been sealed with resilient rubber or mylar. In addition, case sections have been designed with tongue and groove construction to provide an overlapping closure. These features make the 205 ideal for applications in harsh environments where reliable protection is essential.

205 protectors have standard full load current ratings from 0.050 amperes to 100 amperes and voltage ratings to 65 Vdc and $277 / 480 \mathrm{Vac}$. Like all Airpax magnetic protectors, the trip current rating is not affected by ambient temperature.

The 205 is recognized by UL and certified by CSA under the Component program. Non UL-recognized versions of this series are designated 295.

## APL/UPL, 205/295 MULTI-POLE CIRCUIT PROTECTORS

## Multi-Pole Circuit Protectors

Multi-pole protectors are combined in an assembly with the actuating handles linked and the trip mechanisms internally coupled. A fault in either protected circuit opens all poles simultaneously. Applications include use in two-phase circuits, single-phase three-wire systems or in two or more related but electrically isolated circuits. A mix of delays, ratings and configurations is possible, with the series type having any of the auxiliary switches listed. Combinations up to nine poles are available.

| Multi-Pole Dimensions |  |
| :--- | :--- |
| 2 pole A | 1.515 (38.48) max. |
| 3 pole A | 2.265 (57.53) max. |
| 4 pole A | 3.015 (76.58) max. |
| 5 pole A | $3.765(95.63)$ max. |
| 6 pole A | 4.515 (114.68) max. |
| 7 pole A | 5.265 (133.73) max. |
| 8 pole A | 6.015 (152.78) max. |
| 9 pole A | 6.765 (171.83) max. |
| Note: Dimension "A" varies with number of poles |  |

## Mounting Details

One Pole

Two Pole

Three Pole

Panel Mounting Tolerances: $\pm .005$ [.13] unless noted.

## Barriers

There are three barrier styles available for the 205/295, 215/285 protectors. Barrier style " B " is supplied for voltages between 200Vac and 250 Vac inclusive. Barrier style " D " is required for voltages above 250 Vac . Barrier style "C" is available for voltages up to 200Vac and is required when current ratings exceed 50 amperes. APL/UPL multipole protectors can be supplied with barriers at customer option. Consult factory. (See note D, page 172).

## Barrier Style B

Barrier Style C

Barrier Style D

## Series Trip

The most popular configuration for magnetic protectors is the series trip where the sensing coil and contacts are in series with the load being protected. The handle position conveniently indicates circuit status. In addition to providing conventional over-current protection, it's simultaneously used as an on-off switch.

## Auxiliary Switch

## (Applies to Series Trip Only)

This is furnished as an integral part of a series pole in single or multi-pole assemblies. Isolated electrically from the protector's circuit, the switch works in unison with the power contacts and provides indication at a remote location of the protector's on-off status.

Auxiliary switch contacts actuate simultaneously with the main protector contacts, and will open regardless of whether the protector contacts are opened manually or electrically. For auxiliary switch ratings below 6 Vac or 5 Vdc , an auxiliary switch with gold contacts is available. Gold contacts are not recommended for load current above 100 milliamps.

The contacts on our optional RS auxiliary switch will open only in the event of an electrical trip of the circuit protector.

## Relay Trip

This permits the overload sensing coil to be placed in a circuit which is electrically isolated from the trip contacts. The coil may be actuated by sensors monitoring pressure, flow, temperature, speed, etc. Other typical applications include crowbar, interlock and emergency/rapid shutdown circuitry. Trip may be accomplished by voltage or current, which must be removed immediately upon tripping.

## Dual Coil

Dual coil protectors provide remote shut down option and normal overcurrent protection in the confines of a single protector pole. This construction saves space by eliminating the need for an additional pole for the voltage trip function.

## Voltage Trip

Sometimes called "dump circuits" or "panic trip circuits," these units make it possible to open main power contacts with lower power inputs from one or more sources. This configuration is becoming increasingly more important for sensitive circuitry and denser packaging in automation systems. Available in series, shunt, relay or dual coil configurations.

## Shunt Trip

The shunt trip is designed for controlling two separate loads with one assembly. The control is established by providing overload protection for the critical load. When the current through this load becomes excessive and reaches the trip point, the protector will open and remove power from both loads simultaneously. The total current rating of both loads must not exceed the maximum contact rating.

## Series Trip (See Note A)

## Series Trip with Auxiliary Switch

## Shunt, Relay and Dual Coil

Notes:
Tolerance $\pm .015$ [.38] unless noted. Dimensions in brackets [] are millimeters
A Terminal sizes: 10-32 THD ( $\leq 50$ AMP), $1 / 4-28$ THD ( $\geq 50$ AMP) Metric Terminals (Optional),
M5 x 0.8 THD ( $\leq 50$ AMP).
B Minimum useable thread length: 10-32 THD (. 250 on protectors without terminal boards, .160 with terminal boards) $1 / 4-28$ THD (.200).

## APLIUPL, 205/295 OPERATING CHARACTERISTICS

## Inrush Pulse Tolerance (typ)

The following table provides a comparison of inrush pulse tolerance with and without the inertial delay feature for each of the $50 / 60 \mathrm{~Hz}$ delays. Pulse tolerance is defined as a single pulse of half sine wave peak current amplitude of 8 milliseconds duration that will not trip the circuit protector.

All trip curves and trip currents are specified with the protector mounted in the normal vertical position at ambient temperature of $+25^{\circ} \mathrm{C}$. Protectors do not carry current prior to

| Delay | Peak Amplitude |
| :--- | :---: |
| 61,62 | 12 times rated current |
| $61 \mathrm{~F}, 62 \mathrm{~F}$ | 20 times rated current |
| $64,65,66$ | 20 times rated current |
| $64 \mathrm{~F}, 65 \mathrm{~F}, 66 \mathrm{~F}$ | 35 times rated current |
| Note: These limits do not apply to dual coil and tapped coil units. |  | application of overload.

Note: These limits do not apply to dual coil and tapped coil units.

## Percentage of Rated Current vs Trip Time in Seconds for Delay Curves

| Table 1 <br> 0.050-50 Amps | Delay | 100\% | 125\% (Note A) | 150\% | 200\% | 400\% | 600\% | 800\% | 1000\% |

*Notes: All trip times and trip currents are specified with the breaker mounted in the normal vertical position at ambient temperature of 25 C . Breakers do not carry current prior to application of overload.
A. $130 \%$ for delays $49,135 \%$ for delays 71,72 and 73 .

## 60Hz Delay Curves (typ)

A choice of delays are offered for 60 Hz applications. Delays 60 and 69 are fast acting non-delayed tripping to protect sensitive electronic equipment (not recommended where known inrush exists). Delay 61 has a short delay for general purpose applications. Delay 62 is long enough to start certain types of motors and most transformers and capacitor loads. Delay 63 is an extra long delay primarily for special motor applications.

## APLIUPL, 205/295 DELAY CURVES

## Delays 64, 65 and 66

Delays 64,65 and 66 are the latest $50 / 60 \mathrm{~Hz}$ delays with short, medium and long trip times respectively. The patented protector design provides both increased tolerance to high inrush induced nuisance tripping and longer trip times at 600 percent. These delays are ideally suited for applications where thermal devices are presently used, such as motor protection or where short duration, high inrush currents are experienced. As shown in a typical motor start-up curve, the delay 66 will provide locked rotor and overload protection. Nuisance tripping is avoided since acceptable short periods of overload will not trip the protector.

## DC/50/60Hz Delay Curves (typ) (Multi-frequency)

A choice of delays is offered for combined DC and $50 / 60 \mathrm{~Hz}$ operation. Delay 70 is fast acting, non-delayed tripping to protect sensitive electronic equipment (not recommended where known inrush exists). Delay 71 has a short delay for general purpose applications. Delay 72 is long enough to start certain types of motors and most transformer and capacitor loads. Delay 73 is an extra long delay primarily for special motor applications.

## DC Delay Curves (typ)

A choice of delays is offered for DC applications. Delays 50 and 59 provide fast acting, non-delayed tripping to protect sensitive electronic equipment (not recommended where known inrush exists). Delay 51 has a short delay for general purpose applications. Delay 52 is long enough to start certain types of motors. Delay 53 is an extra long delay used primarily for special motor applications.

## 400Hz Delay Curves (typ)

A choice of delays is offered for 400 Hz applications. Delays 40 and 49 are fast acting, non-delayed tripping to protect sensitive electronic equipment (not recommended where known inrush exists). Delay 41 has a short delay for general purpose applications. Delay 42 is long enough to start certain types of motor and most transformers and capacitor loads. Delay 43 is an extra long delay primarily for special motor applications.

## APLIUPL SPECIFICATIONS

## Trip Free

Will trip open on overload, even when the handle is forcibly held on or restrained. This prevents operator from damaging the circuit by holding the handle in the ON position.

## Trip Indication

The operating handle moves positively to the OFF position on overload.

## Ambient Operation

Operates normally in temperatures between $-40^{\circ} \mathrm{C}$ and $+85^{\circ} \mathrm{C}$.

## Insulation Resistance

Not less than 100 megohms at 500 Vdc .

## Dielectric Strength

Withstands 1500 Vac at 60 Hz for 60 seconds or 1800 Vac for one second from terminal to terminal, and from auxiliary switch terminal to main terminal.

## Endurance

Per UL 1077 (6000 operations at rated load plus 4000 operations with no load). Tested at a maximum rate of 6 times per minute. Rating above 50 amperes operate a minimum of 5000 operations.

## Shock

Withstands 100G or more without tripping while carrying full rated current per MIL-Std-202, Method 213, Test Condition I. Instantaneous types (delay 40, 50, 60 and 49, 59, 69) and dual coil configurations are tested at $80 \%$ of rated current. Protectors mounted in the handle down position are to be tested with no current applied (per MIL-PRF-55629).

## Vibration

Withstands 10G without tripping while carrying full rated current per MIL-Std-202, Method 204, Test Condition A. Instantaneous types (delay 40, 50, 60 and 49, 59, 69) and dual coil configurations are tested at $80 \%$ of rated current.

## Dual Coil Ratings

$5-65 \mathrm{Vdc}$ and $5-250 \mathrm{Vac}$ for three terminal configurations. $5-120 \mathrm{Vac}$ and $5-120 \mathrm{Vdc}$ for four terminal configurations. Not available in delays 64, 65 and 66.

## APL Ratings

$0.050-50$ amperes, $65 \mathrm{Vdc}, 250 \mathrm{Vac}$ maximum, $50 / 60 \mathrm{~Hz}$ or 400 Hz . 51-100 amperes at 65 Vdc and 120 Vac maximum. Ratings of $0.050-20$ amperes at $277 \mathrm{Vac}, 50 / 60 \mathrm{~Hz}$ are available upon request.

## Auxiliary Switch Ratings

(APL/UPL, 205/295)
REC4 and REC5 are rated at 10 amperes, 250 Vac or 3 amperes, 50 Vdc . REG4 and REG5 are rated at 0.1 amperes, 125 Vac .

## UPL Ratings

UPL protectors are UL 1077 (File No. E-66410) and CSA 22.2 No. 235 (File No. LR-26229) recognized as Supplementary Protectors in the following configurations and ratings. Consult factory for further information.

## Configurations

Series, Shunt, Relay, Auxiliary Switch, Switch Only, Dual Coil, No Voltage.

## Poles

One through nine.

## Moisture Resistance

Designed to meet the requirements of MIL-PRF-55629 when tested in accordance with Method 106 of MIL-Std-202.

## Salt Spray (Corrosion)

Designed to meet the requirements of MIL-PRF-55629 when tested in accordance with Method 101 of MIL-Std-202.

Approximate Weight Per Pole

| Ounces | Grams |
| :--- | :--- |
| 3.7 | 103 |

## Recommended Torque Specifications

| $6-32$ mounting inserts | $6-8$ inch pounds |
| :--- | :--- |
| M3 mounting inserts | $4-5$ inch pounds |
| $10-32$ stud terminals | $13-14$ inch pounds |
| M5 stud terminals | $13-14$ inch pounds |
| $1 / 4-28$ stud terminals | $25-30$ inch pounds |

## 205/295 SPECIFICATIONS

## Trip Free

Will trip open on overload, even when the handle is forcibly held on or restrained. This prevents operator from damaging the circuit by holding the handle in the ON position.

## Trip Indication

The operating handle moves positively to the OFF position on overload.

## Ambient Operation

Operates normally in temperatures between $-40^{\circ} \mathrm{C}$ and $+85^{\circ} \mathrm{C}$.

## Insulation Resistance

Not less than 100 megohms at 500 Vdc .

## Dielectric Strength

Withstands 1500 Vac at 60 Hz for 60 seconds or 1800 Vac for one second from terminal to terminal, and from auxiliary switch terminal to main terminal.

## Endurance

Per UL 1077 (6000 operations at rated load plus 4000 operations with no load). Tested at a maximum rate of six times per minute. Rating above 50 amperes operate a minimum of 5000 operations.

## Dual Coil Ratings

$5-65 \mathrm{Vdc}$ and $5-250 \mathrm{Vac}$ for three terminal configurations. $5-120 \mathrm{Vac}$ and $5-120 \mathrm{Vdc}$ for four terminal configurations. Not available in delays 64, 65 and 66.

## 295 Ratings

$0.05-100$ amperes, $65 \mathrm{Vdc}, 0.050-60$ amperes, 250 Vac maximum, $50 / 60 \mathrm{~Hz}$ or 400 Hz . $51-100$ amperes at 65 Vdc and 120 Vac maximum. 30 amperes at $277 / 480$ Vac for 3 phase WYE Connected applications only. Ratings to 20 amperes at 277 Vac , $50 / 60 \mathrm{~Hz}$ are available upon request.

## 205 Ratings

205 protectors are UL (File No. E-66410) and CSA (File No. LR-26229) recognized as Component Appliance Controls in the following configurations and ratings.

## 205D Ratings

205D protectors are UL- 1500 (Marine Ignition Protection) recognized at 65 Vdc or 250 Vac to 60 amperes maximum at 1000 AIC. Consult factory for application details.

## Configurations

Series, Shunt, Relay, Auxiliary Switch, Switch Only.

## Poles

One through nine.

## Coil Impedance

Notes: DCR and Impedance based on 100\% rated current applied and stabilized a minimum of one hour. Tolerance . 050 amperes to 2.5 amperes, $\pm 20 \%$; 2.6 amperes to 20 amperes, $\pm 25 \% ; 21$ amperes to 50 amperes, $\pm 50 \%$. Consult factory for special values and for coil impedance of delays not shown.

## Ratings

| Configurations | Current Ratings (Amperes) | Maximum Voltage Ratings | Interrupting Capacity (Amperes) | Series Fuse |
| :---: | :---: | :---: | :---: | :---: |
| Series and Shunt | 0.050-50 | 65 Vdc | 5000 | None |
|  | 0.050-100 | 65 Vdc | 3000 | None |
|  | 0.050-60 | $120 \mathrm{Vac}(50 / 60 \mathrm{~Hz})$ | 1000 | None |
|  | 0.050-50 | $120 \mathrm{Vac}(50 / 60 \mathrm{~Hz})$ | 5000 | 4X (125 max.) |
|  | 0.050-30 | $277 \mathrm{Vac}(50 / 60 \mathrm{~Hz})$ | 5000 | 4X |
|  | 0.050-50 | $250 \mathrm{Vac}(50 / 60 \mathrm{~Hz})$ | 5000 | 4X (125 max.) |
|  | 0.050-50 | $120 \mathrm{Vac}(400 \mathrm{~Hz})$ | 1500 | None |
|  | 21-50 | $250 \mathrm{Vac}(400 \mathrm{~Hz})$ | 1000 | None |
|  | 0.050-20 | $250 \mathrm{Vac}(400 \mathrm{~Hz})$ | 2100 | None |
| Series Only | 0.050-30 | 277/480Vac (50/60Hz) | 5000 | 4X (80A max.) |
|  | 0.050-30 | $277 / 480 \mathrm{Vac}(50 / 60 \mathrm{~Hz})$ | 1500 | None |
| Relay | 0.050-50 | 50 Vdc |  |  |
|  | 0.050-50 | $120 \mathrm{Vac}(50 / 60 \mathrm{~Hz})$ |  |  |
|  | 0.050-50 | $120 \mathrm{Vac}(400 \mathrm{~Hz})$ |  |  |
|  | 0.050-50 | $250 \mathrm{Vac}(50 / 60 \mathrm{~Hz}-400 \mathrm{~Hz}$ ) |  |  |
| Switch Only | 100 amperes max. 65Vdc |  |  |  |
|  | 100 amperes max. 32Vdc |  |  |  |
|  | 50 amperes max. $250 \mathrm{Vac}(50 / 60 \mathrm{~Hz}$ ) |  |  |  |
|  | 50 amperes max. 250Vac ( 400 Hz ) |  |  |  |

Notes: DC units do not require series fusing.
277 Vac : A circuit breaker with this voltage rating is intended for 277 Vac per pole single phase source only usage. (e.g.) 60 ampere units and $277 / 480 \mathrm{Vac}$ units require a $2 \times 4$ inch interphase barrier for mulitpole units. If a two or three pole breaker is marked 277 Vac , all line terminals must be connected to the same phase, assuming the 277 Vac is taken from line to neutral of a three phase $277 / 480 \mathrm{Vac}$ system.

## Auxiliary Switch Ratings

(APL/UPL, 205/295)
REC4 and REC5 are rated at 10 amperes, 250 Vac or 3 amperes, 50 Vdc . REG4 and REG5 are rated at 0.1 amperes, 125 Vac .

## Moisture Resistance

Designed to meet the requirements of MIL-PRF-55629 when tested in accordance with Method 106 of MIL-Std-202.

## Salt Spray (Corrosion)

Designed to meet the requirements of MIL-PRF-55629 when tested in accordance with Method 101 of MIL-Std-202.

## MPL Ratings

MPL protectors are UL (File No. E-41607) and CSA (File No. LR-26229) recognized as manual, across the line starters, in the following configurations and ratings. Consult factory for further information.

## Configurations

Series only with and without auxiliary switch.

## Poles

One, two or three.

## Shock

Withstands 100G or more without tripping while carrying full rated current per MIL-Std-202, Method 213, Test Condition I. Instantaneous types (delay 40, 50, 60 and 49,59, 69) are tested at $80 \%$ of rated current. Protectors mounted in the handle down position are to be tested with no current applied (per MIL-PRF-55629).

## Vibration

Withstands 10G without tripping while carrying full rated current per MIL-Std-202, Method 204, Test Condition A. Instantaneous types (delay 40,50, 60 and 49,59, 69) are tested at $80 \%$ of rated current.

Approximate Weight Per Pole

| Ounces | Grams |
| :--- | :--- |
| 3.7 | 103 |

| Recommended Torque Specifications |  |
| :--- | :--- |
| $6-32$ mounting inserts | $6-8$ inch pounds |
| M3 mounting inserts | $4-5$ inch pounds |
| $10-32$ stud terminals | $13-14$ inch pounds |
| M5 stud terminals | $13-14$ inch pounds |
| $1 / 4-28$ stud terminals | $25-30$ inch pounds |

## MPL Ratings

| Current Ratings <br> (Amperes) | Maximum Voltage <br> Ratings | Horsepower <br> Single Phase | Ratings Three Phase <br> (Note A) |
| :--- | :--- | :--- | :--- |
| $0.050-50.0$ | 65 Vdc | 1 |  |
| $0.050-50.0$ | $120 \mathrm{Vac}(50 / 60 \mathrm{~Hz}$ | 3 | 7.5 |
| $0.050-20.0$ | $240 \mathrm{Vac}(50 / 60 \mathrm{~Hz})$ | 3 | 5 |
| $0.050-20.0$ | $277 \mathrm{Vac}(50 / 60 \mathrm{~Hz})$ | 3 | 5 |

Note: $A C$ units require maximum of $4 X$ rated series fusing; $D C$ units do not require series fusing. A. Two or three poles breaking.

## APLIUPL DECISION TABLES

## How to Order

The ordering code for APL/UPL circuit protectors may be determined by following the steps in the decision tables shown here.

The coding given permits a self-assigning part number; other configurations may require a factory assigned part number. Typical examples are units with mixed ratings, combinations of styles or constructions not listed in the third decision table, etc. With these, it is suggested that order entry be by description and/or drawings and a part number will be assigned. Additionally, it is a standard policy to establish a factory assigned part number wherever a descriptive drawing exists to provide cross reference, traceability and manufacturing control.

When specifying a protector for AC motor start or high inrush applications, the peak amplitude and surge duration should be specified for factory assistance in rating selection.

For example, the code shown is the code for a two pole UPL protector with series trip, 20 ampere rating, $50 / 60 \mathrm{~Hz}$. short time delay construction in all poles.
To determine the ordering number for your particular APL/UPL unit, simply follow the steps shown. You may use this number to place an order or as a reference for further questions you may have.

## Notes:

A The most common current values for $100 \%$ of rated current are those listed. Please consult an Airpax office or sales representative for other values.

B All APL/UPL protectors are constructed with stainless steel springs and plated parts. As noted in the specifications, all meet normal requirements for moisture and salt spray resistance. If fungus resistance is required in addition to moisture and salt spray resistance, special procedures and markings are employed.

C Terminals will be supplied as \#10-32 threaded studs up to 50 amperes. Above this amperage terminals will be $1 / 4-28$ threaded studs. All standard units will be supplied with a hex nut and two flat washers on each threaded terminal.

D When metric threaded inserts are specified, protectors rated at 50 amperes and below will be supplied with metric threaded terminals. For protectors rated above 50

## amperes,

$1 / 4-28$ threaded terminals will be supplied.
E Black handle standard.

## 205/295 DECISION TABLES

## How to Order

The ordering code for 205/295 circuit protectors may be determined by following the steps in the decision tables shown here.

For example, the code shown is the code for a UL recognized, two pole protector with series trip, 20 ampere rating at 240 Vac max., $50 / 60 \mathrm{~Hz}$ short time delay construction in all poles.
To determine the ordering number for your particular 205/295 unit, simply follow the steps shown. You may use this number to place an order or as a reference for further questions you may have.

## Notes:

A The most common current values for $100 \%$ of rated current are those listed. Please consult an Airpax office or sales representative for other values.

B All 205/295 protectors are constructed with stainless steel springs and plated parts. As noted in the specifications, all meet normal requirements for moisture and salt spray resistance. If fungus resist ance is required in addition to moisture and salt spray resistance, special procedures and markings are employed.

C Terminals will be supplied as \#10-32 threaded studs up to 50 amperes. Above this amperage terminals will be $1 / 4-28$ threaded studs. All standard units will be supplied with a hex nut and 2 flat washers on each threaded terminal.

D For detailed barrier and wiring information, request Airpax specification AM-433.

E When metric threaded inserts are specified, protectors rated at 50 amperes and below will be supplied with metric threaded terminals. For protectors rated above 50 amperes, $1 / 4-28$ threaded terminals will be supplied.

F Available in multi-pole, series only for multiphase applications.
