

# DYNAGRIP' Chisel Sets

This new range of STANLEY DYNAGRIP' bevel edged chisel sets offer enhanced comfort and superior performance. The cushion grip handles feature soft touch, polypropylene material for improved grip and enhanced chisel alignment; they are virtually unbreakable and tough enough to withstand hammer blows. They have wide ends giving a large striking area and offer greater shock absorption, reducing grip force required. The blades are oiled and guarded and are made from quality chrome alloy steel blade (ball bearing grade), providing strength and durability, fully heat treated hardened and tempered to maintain the cutting edge longer. Accurately ground bevels provide accessibility and balance and are ground back for fine sharpening. Overall bolster construction secures the handle to the blade for a fixing that will not twist.
