

DSP56301

24-Bit Digital Signal Processor

The DSP56301 is a member of the DSP56300 core family of programmable CMOS DSPs. This family uses a high-performance, single clock cycle per instruction engine. Significant architectural features of the DSP56300 core family include a barrel shifter, 24-bit addressing, instruction cache, and DMA. The DSP56301 performs at 66/80/100 MIPS using an internal 66/80/100 MHz clock at 3.0–3.6 volts. The DSP56300 core family offers a rich instruction set and low power dissipation, as well as increasing levels of speed and power, enabling wireless, telecommunications, and multimedia products.
