

# Silicon Phototransistor

## OP580

### Features:

- Wide acceptance angle
- Fast response time
- Plastic leadless chip carrier (PLCC)

### Description:

The **OP580** is an NPN silicon phototransistor mounted in a miniature SMD package. The device has a flat window lens, which enables a wide acceptance angle. It is packaged in a plastic leadless chip carrier that is compatible with most automated mounting equipment. *The OP580 is mechanically and spectrally matched to the OP280 infrared LED.*

*Please refer to Application Bulletins 208 and 210 for additional design information and reliability (degradation) data.*

### Applications:

- Non-contact position sensing
- Datum detection
- Machine automation
- Optical encoders

Notes:

- Solder time less than 5 seconds at temperature extreme.
- Derate linearly at 2.17 mW/° C above 25° C.
- $E_{E(APT)}$  is an unfiltered GaAs LED with a peak emission wavelength of 935 nm and a radiometric intensity level which varies less than 10% over the entire lens surface of the phototransistor being tested.
- To calculate typical collector dark current in  $\mu\text{A}$ , use the formula  $I_{CE0} = 10^{(0.04 T_a - 3.4)}$  where  $T_a$  is the ambient temperature in ° C.
