

LOK01

151-80110

The LOK01 - LOK05 were primarily designed to be used with the RPE and PE series of cable ties but will function just as well with any cable ties up to 9mm wide. Suitable for use in a wide range of materials including, concrete, brick, block or wood. Installed by knocking into a 7mm or 8mm diameter hole (depending on the material). The LOK01B is designed for soft brickwork and 6 mm holes. Because of its elongated head, the bundles can be located at a distance from the brickwork with the LOK05.

The LOK mounts, in conjunction with a cable tie can be used either indoors or outdoors for a diverse range of applications from holding climbing plants, to securing cables running between buildings.
