ANALOG DEVICES

Copyright Information

Printed in the USA.

Limited Warranty

The EZ-KIT Lite evaluation system is warranted against defects in materials and workmanship for a period of one year from the date of purchase from Analog Devices or from an authorized dealer.

Disclaimer

Analog Devices, Inc. reserves the right to change this product without prior notice. Information furnished by Analog Devices is believed to be accurate and reliable. However, no responsibility is assumed by Analog Devices for its use; nor for any infringement of patents or other rights of third parties which may result from its use. No license is granted by implication or otherwise under the patent rights of Analog Devices, Inc.

Trademark and Service Mark Notice

The Analog Devices icon bar and logo, VisualDSP++, the VisualDSP++ logo, Blackfin, the Blackfin logo, the CROSSCORE logo, EZ-KIT Lite, and EZ-Extender are registered trademarks of Analog Devices, Inc.

All other brand and product names are trademarks or service marks of their respective owners.

Regulatory Compliance

The ADSP-BF538F EZ-KIT Lite is designed to be used solely in a laboratory environment. The board is not intended for use as a consumer end product or as a portion of a consumer end product. The board is an open system design which does not include a shielded enclosure and therefore may cause interference to other electrical devices in close proximity. This board should not be used in or near any medical equipment or RF devices.

The ADSP-BF538F EZ-KIT Lite has been certified to comply with the essential requirements of the European EMC directive 89/336/EEC amended by 93/68/EEC and therefore carries the "CE" mark.

The ADSP-BF538F EZ-KIT Lite has been appended to Analog Devices, Inc. Technical Construction File (TCF) referenced 'DSPTOOLS1' dated December 21, 1997 and was awarded CE Certification by an appointed European Competent Body as listed below.

Technical Certificate No: Z600ANA1.028

Issued by: Technology International (Europe) Limited
60 Shrivenham Hundred Business Park
Shrivenham, Swindon, SN6 8TY, UK

The EZ-KIT Lite evaluation system contains ESD (electrostatic discharge) sensitive devices. Electrostatic charges readily accumulate on the human body and equipment and can discharge without detection. Permanent damage may occur on devices subjected to high-energy discharges. Proper ESD precautions are recommended to avoid performance degradation or loss of functionality. Store unused EZ-KIT Lite boards in the protective shipping package.

CONTENTS

PREFACE

Thank you for purchasing the ADSP-BF538F EZ-KIT Lite®, Analog Devices, Inc. evaluation system for Blackfin® processors.

Blackfin processors embody a new type of embedded processor designed specifically to meet the computational demands and power constraints of today's embedded audio, video, and communications applications. They deliver breakthrough signal-processing performance and power efficiency within a reduced instruction set computing (RISC) programming model.

Blackfin processors support a media instruction set computing (MISC) architecture. This architecture is the natural merging of RISC, media functions, and digital signal processing (DSP) characteristics. Blackfin processors deliver signal-processing performance in a microprocessor-like environment.

Based on the Micro Signal Architecture (MSA), Blackfin processors combine a 32-bit RISC instruction set, dual 16-bit multiply accumulate (MAC) DSP functionality, and 8-bit video processing performance that had previously been the exclusive domain of very-long instruction word (VLIW) media processors.

The evaluation board is designed to be used in conjunction with the VisualDSP++® development environment to test the capabilities of the ADSP-BF538F Blackfin processors. The VisualDSP++ development environment gives you the ability to perform advanced application code development and debug, such as:

- Create, compile, assemble, and link application programs written in C++, C, and ADSP-BF538F assembly
- Load, run, step, halt, and set breakpoints in application programs
- Read and write data and program memory
- Read and write core and peripheral registers
- Plot memory

Access to the ADSP-BF538F processor from a personal computer (PC) is achieved through a USB port or an optional JTAG emulator. The USB interface gives unrestricted access to the ADSP-BF538F processor and the evaluation board peripherals. Analog Devices JTAG emulators offer faster communication between the host PC and target hardware. Analog Devices carries a wide range of in-circuit emulation products. To learn more about Analog Devices emulators and processor development tools, go to `http://www.analog.com/processors/index.html`.

The ADSP-BF538F EZ-KIT Lite provides example programs to demonstrate the capabilities of the evaluation board.

The ADSP-BF538F EZ-KIT Lite installation is part of the VisualDSP++ installation. The EZ-KIT Lite is a licensed product that offers an unrestricted evaluation license for the first 90 days. For details about evaluation license restrictions after the 90 days, refer to “Evaluation License Restrictions” on page 1-7 and the *VisualDSP++ Installation Quick Reference Card*.

The board features:

- Analog Devices ADSP-BF538F processor
  - Core performance up to 600 MHz
  - External bus performance to 133 MHz
  - 182-pin mini-BGA package
  - 25 MHz crystal
- Synchronous dynamic random access memory (SDRAM)
  - MT48LC32M8 – 64 MB (8M x 8-bits x 4 banks) x 2 chips
- Flash memory
  - 4MB (2M x 16-bits)
- Analog audio interface
  - AD1871 96 kHz analog-to-digital codec (ADC)
  - AD1854 96 kHz digital-to-audio codec (DAC)
  - 1 input stereo jack
  - 1 output stereo jack
- Controller Area Network (CAN) interface
  - Philips TJA1041 high-speed CAN transceiver
- National Instruments Educational Laboratory Virtual Instrumentation Suite (ELVIS) interface
  - LabVIEW™-based virtual instruments
  - Multifunction data acquisition device
  - Bench-top workstation and prototype board

- Universal asynchronous receiver/transmitter (UART)
  - ADM3202 RS-232 line driver/receiver
  - DB9 female connector
- LEDs
  - 10 LEDs: 1 power (green), 1 board reset (red), 1 USB (red), 5 general-purpose (amber), and 1 USB monitor (amber)
- Push buttons
  - 5 push buttons: 1 reset, 4 programmable flags with debounce logic
- Expansion interface
  - All processor signals
- Other features
  - JTAG ICE 14-pin header

The EZ-KIT Lite board has flash memory with a total of 4 MB. Flash memory can be used to store user-specific boot code, allowing the board to run as a stand-alone unit. For more information, see "Flash Memory" on page 1-10. The board also has 64 MB of SDRAM, which can be used by the user at runtime.

`SPORT0` interfaces with the audio circuit, facilitating development of audio signal processing applications. `SPORT0`, `SPORT1`, and `SPORT2` also interface to an off-board connector for communication with other serial devices. For more information, see "SPORT0 Interface" on page 2-4.

The UART of the processor connects to an RS-232 line driver and a DB9 female connector, providing an interface to a PC or other serial device.

Additionally, the EZ-KIT Lite board provides access to all of the processor's peripheral ports. Access is provided in the form of a three-connector expansion interface. For more information, see "Expansion Interface" on page 2-8.

Purpose of This Manual

The *ADSP-BF538F EZ-KIT Lite Evaluation System Manual* provides instructions for installing the product hardware (board). The text describes operation and configuration of the board components and provides guidelines for running your own code on the ADSP-BF538F EZ-KIT Lite. Finally, a schematic and a bill of materials are provided as a reference for future designs.

The product software installation is detailed in the *VisualDSP++ Installation Quick Reference Card*.

Intended Audience

The primary audience for this manual is a programmer who is familiar with Analog Devices processors. This manual assumes that the audience has a working knowledge of the appropriate processor architecture and instruction set. Programmers who are unfamiliar with Analog Devices processors can use this manual but should supplement it with other texts (such as the *ADSP-BF538/ADSP-BF538F Blackfin Processor Hardware Reference* and *Blackfin Processor Instruction Set Reference*) that describe your target architecture.

Programmers who are unfamiliar with VisualDSP++ should refer to the VisualDSP++ online Help and user's or getting started guides. For the locations of these documents, see "Related Documents".

Manual Contents

The manual consists of:

- Chapter 1, “Using ADSP-BF538F EZ-KIT Lite” on page 1-1.
  Describes EZ-KIT Lite functionality from a programmer’s perspective and provides an easy-to-access memory map.
- Chapter 2, “ADSP-BF538F EZ-KIT Lite Hardware Reference” on page 2-1.
  Provides information on the EZ-KIT Lite hardware components.
- Appendix A, “ADSP-BF538F EZ-KIT Lite Bill Of Materials” on page A-1.
  Provides a list of components used to manufacture the EZ-KIT Lite board.
- Appendix B, “ADSP-BF538F EZ-KIT Lite Schematic” on page B-1.
  Provides the resources to allow EZ-KIT Lite board-level debugging or to use as a reference design. Appendix B is part of the online Help.

What’s New in This Manual

The *ADSP-BF538F EZ-KIT Lite Evaluation System Manual* has been updated to reflect the latest revision of the board.

Technical or Customer Support

You can reach Analog Devices, Inc. Customer Support in the following ways:

- Visit the Embedded Processing and DSP products Web site at
  `http://www.analog.com/processors/technicalSupport`
- E-mail tools questions to
  `processor.tools.support@analog.com`
- E-mail processor questions to
  `processor.support@analog.com (World wide support)`
  `processor.europe@analog.com (Europe support)`
  `processor.china@analog.com (China support)`
- Phone questions to 1-800-ANALOGD
- Contact your Analog Devices, Inc. local sales office or authorized distributor
- Send questions by mail to:
  ```

  P.O. Box 9106
  Norwood, MA 02062-9106
  USA
  ```

Supported Processors

This evaluation system supports Analog Devices ADSP-BF538F Blackfin embedded processors.

Product Information

You can obtain product information from the Analog Devices Web site, from the product CD-ROM, or from printed publications (manuals).

Analog Devices is online at www.analog.com. Our Web site provides information about a broad range of products—analog integrated circuits, amplifiers, converters, and digital signal processors.

MyAnalog.com

MyAnalog.com is a free feature of the Analog Devices Web site that allows customization of a Web page to display only the latest information on products you are interested in. You can also choose to receive weekly e-mail notifications containing updates to the Web pages that meet your interests. MyAnalog.com provides access to books, application notes, data sheets, code examples, and more.

Registration:

Visit www.myanalog.com to sign up. Click Register to use MyAnalog.com. Registration takes about five minutes and serves as means for you to select the information you want to receive.

If you are already a registered user, just log on. Your user name is your e-mail address.

Processor Product Information

For information on embedded processors and DSPs, visit our Web site at www.analog.com/processors, which provides access to technical publications, data sheets, application notes, product overviews, and product announcements.

You may also obtain additional information about Analog Devices and its products in any of the following ways.

- E-mail questions or requests for information to
  processor.support@analog.com (World wide support)
  processor.europe@analog.com (Europe support)
  processor.china@analog.com (China support)
- Fax questions or requests for information to
  1-781-461-3010 (North America)
  +49-89-76903-157 (Europe)

Related Documents

For information on product related development software, see the following publications.

Table 1. Related Processor Publications

Title	Description
ADSP-BF538/ADSP-BF538F Embedded Processor Data Sheet	General functional description, pinout, and timing.
ADSP-BF538/ADSP-BF538F Blackfin Processor Hardware Reference	Description of internal processor architecture and all register functions.
Blackfin Processor Programming Reference	Description of all allowed processor assembly instructions.

If you plan to use the EZ-KIT Lite board in conjunction with a JTAG emulator, also refer to the documentation that accompanies the emulator.

All documentation is available online. Visit the Technical Library Web site to access all processor and tools manuals and data sheets: http://www.analog.com/processors/technicalSupport/technicalLibrary/.

Table 2. Related VisualDSP++ Publications

Title	Description
ADSP-BF538F EZ-KIT Lite Evaluation System Manual	Description of the hardware capabilities of the evaluation system; description of how to access these capabilities in the VisualDSP++ environment.
VisualDSP++ User's Guide	Description of the VisualDSP++ features and usage.
VisualDSP++ Assembler and Preprocessor Manuals	Description of the assembler function and commands.
VisualDSP++ C/C++ Complier and Library Manual for Blackfin Processors	Description of the complier function and commands for Blackfin processors.
VisualDSP++ Linker and Utilities Manual	Description of the linker function and commands.
VisualDSP++ Loader and Utilities Manual	Description of the loader/splitter function and commands.

Online Technical Documentation

Online documentation comprises the VisualDSP++ Help system, software tools manuals, hardware tools manuals, processor manuals, the Dinkum Abridged C++ library, and Flexible License Manager (FlexLM) network license manager software documentation. You can easily search across the entire VisualDSP++ documentation set for any topic of interest. For easy printing, supplementary `.pdf` files of most manuals are provided in the `Docs` folder on the VisualDSP++ installation CD.

If documentation is not installed on your system as part of the software installation, you can add it from the VisualDSP++ CD at any time by running the Tools installation. Access the online documentation from the VisualDSP++ environment, Windows® Explorer, or the Analog Devices Web site. Each documentation file type is described as follows.

File	Description
.chm	Help system files and manuals in Help format
.htm or .html	Dinkum Abridged C++ library and FlexLM network license manager software documentation. Viewing and printing the .html files requires a browser, such as Internet Explorer 6.0 (or higher).
.pdf	VisualDSP++ and processor manuals in Portable Documentation Format (PDF). Viewing and printing the .pdf files requires a PDF reader, such as Adobe Acrobat Reader (4.0 or higher).

Accessing Documentation From VisualDSP++

To view VisualDSP++ Help, click on the Help menu item or go to the Windows task bar and navigate to the VisualDSP++ documentation via the Start menu.

To view ADSP-BF538F EZ-KIT Lite Help, which is part of the VisualDSP++ Help system, use the Contents or Search tab of the Help window.

Accessing Documentation From Windows

In addition to any shortcuts you may have constructed, there are many ways to open VisualDSP++ online Help or the supplementary documentation from Windows.

Help system files (.chm) are located in the Help folder, and .pdf files are located in the Docs folder of your VisualDSP++ installation CD-ROM. The Docs folder also contains the Dinkum Abridged C++ library and the FlexLM network license manager software documentation.

Your software installation kit includes online Help as part of the Windows interface. These help files provide information about VisualDSP++ and the ADSP-BF538F EZ-KIT Lite evaluation system.

Accessing Documentation From Web

Download manuals at the following Web site: http://www.analog.com/processors/technicalSupport/technicalLibrary/.

Select a processor family and book title. Download archive (`.zip`) files, one for each manual. Use any archive management software, such as WinZip, to decompress downloaded files.

Printed Manuals

For general questions regarding literature ordering, call the Literature Center at 1-800-ANALOGD (1-800-262-5643) and follow the prompts.

Processor Manuals

Hardware reference and instruction set reference manuals may be ordered through the Literature Center at 1-800-ANALOGD (1-800-262-5643), or downloaded from the Analog Devices Web site. Manuals may be ordered by title or by product number located on the back cover of each manual.

Data Sheets

All data sheets (preliminary and production) may be downloaded from the Analog Devices Web site. Only production (final) data sheets (Rev. 0, A, B, C, and so on) can be obtained from the Literature Center at 1-800-ANALOGD (1-800-262-5643); they also can be downloaded from the Web site.

To have a data sheet faxed to you, call the Analog Devices Faxback System at 1-800-446-6212. Follow the prompts and a list of data sheet code numbers will be faxed to you. If the data sheet you want is not listed, check for it on the Web site.

Notation Conventions

Text conventions used in this manual are identified and described as follows. Additional conventions, which apply only to specific chapters, may appear throughout this document.

Example	Description
Close command (File menu)	Titles in reference sections indicate the location of an item within the VisualDSP++ environment's menu system (for example, the Close command appears on the File menu).
`{this | that}`	Alternative required items in syntax descriptions appear within curly brackets and separated by vertical bars; read the example as `this` or `that`. One or the other is required.
`[this | that]`	Optional items in syntax descriptions appear within brackets and separated by vertical bars; read the example as an optional `this` or `that`.
`[this,…]`	Optional item lists in syntax descriptions appear within brackets delimited by commas and terminated with an ellipse; read the example as an optional comma-separated list of `this`.
`.SECTION`	Commands, directives, keywords, and feature names are in text with `letter gothic` font.
`filename`	Non-keyword placeholders appear in text with italic style format.
	Note: For correct operation, ... A Note provides supplementary information on a related topic. In the online version of this book, the word Note appears instead of this symbol.
	Caution: Incorrect device operation may result if ... Caution: Device damage may result if ... A Caution identifies conditions or inappropriate usage of the product that could lead to undesirable results or product damage. In the online version of this book, the word Caution appears instead of this symbol.
	Warning: Injury to device users may result if ... A Warning identifies conditions or inappropriate usage of the product that could lead to conditions that are potentially hazardous for the devices users. In the online version of this book, the word Warning appears instead of this symbol.

1 USING ADSP-BF538F EZ-KIT LITE

This chapter provides specific information to assist you with development of programs for the ADSP-BF538F EZ-KIT Lite evaluation system.

The information appears in the following sections.

- "Package Contents" on page 1-3
  Lists the items contained in the ADSP-BF538F EZ-KIT Lite package.
- "Default Configuration" on page 1-3
  Shows the default configuration of the ADSP-BF538F EZ-KIT Lite.
- "Installation and Session Startup" on page 1-5
  Instructs how to start a new or open an existing ADSP-BF538F EZ-KIT Lite session using VisualDSP++.
- "Evaluation License Restrictions" on page 1-7
  Describes the restrictions of the VisualDSP++ demo license shipped with the EZ-KIT Lite.
- "Memory Map" on page 1-7
  Defines the ADSP-BF538F EZ-KIT Lite board's memory map.
- "SDRAM Interface" on page 1-8·
  Defines the register values to configure the on-board SDRAM.
- "Flash Memory" on page 1-10
  Describes the internal and external flash memory.

- "CAN Interface" on page 1-11
  Describes the on-board Controller Area Network (CAN) interface.
- "ELVIS Interface" on page 1-12
  Describes the on-board National Instruments Educational Laboratory Virtual Instrumentation Suite (NI ELVIS) interface.
- "Audio Interface" on page 1-12
  Describes the on-board audio circuit.
- "LEDs and Push Buttons" on page 1-13
  Describes the board's general-purpose IO pins and buttons.
- "Example Programs" on page 1-14
  Provides information about example programs included in the ADSP-BF538F EZ-KIT Lite evaluation system.
- "Background Telemetry Channel" on page 1-14
  Highlights the advantages of the background telemetry channel (BTC) feature of VisualDSP++.

For information on the graphical user interface, including the boot loading, target options, and other facilities of the EZ-KIT Lite system, refer to the online Help.

For more detailed information about programming the ADSP-BF538F Blackfin processor, see the documents referred to as "Related Documents".

Package Contents

Your ADSP-BF538F EZ-KIT Lite evaluation system package contains the following items.

- ADSP-BF538F EZ-KIT Lite board
- *VisualDSP++ Installation Quick Reference Card*
- CD containing:
  - VisualDSP++ software
  - ADSP-BF538F EZ-KIT Lite debug software
  - USB driver files
  - Example programs
  - ADSP-BF538F *EZ-KIT Lite Evaluation System* Manual (this document)
- Universal 7V DC power supply
- 6-foot 3.5 mm male-to-male audio cable
- 3.5 mm headphones
- 10-foot USB 2.0 cable

If any item is missing, contact the vendor where you purchased your EZ-KIT Lite or contact Analog Devices, Inc.

Default Configuration

The ADSP-BF538F EZ-KIT Lite board is designed to run outside your personal computer as a stand-alone unit. You do not have to open your computer case.

The EZ-KIT Lite evaluation system contains ESD (electrostatic discharge) sensitive devices. Electrostatic charges readily accumulate on the human body and equipment and can discharge without detection. Permanent damage may occur on devices subjected to high-energy discharges. Proper ESD precautions are recommended to avoid performance degradation or loss of functionality. Store unused EZ-KIT Lite boards in the protective shipping package.

When removing the EZ-KIT Lite board from the package, handle the board carefully to avoid the discharge of static electricity, which may damage some components. Figure 1-1 shows the default jumper settings, switches, connector locations, and LEDs used in installation. Confirm that your board is in the default configuration before using the board.

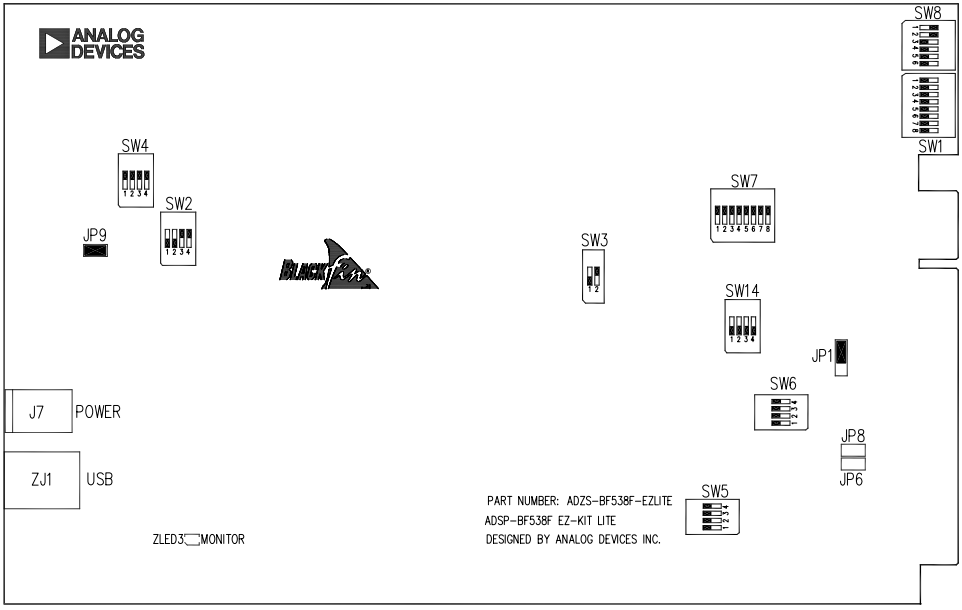

Figure 1-1. EZ-KIT Lite Hardware Setup

Installation and Session Startup

For correct operation, install the software and hardware in the order presented in the *VisualDSP++ Installation Quick Reference Card*.

1. Verify that the yellow USB monitor LED (ZLED3, located near the USB connector) is lit. This signifies that the board is communicating properly with the host PC and is ready to run VisualDSP++.
2. If you are running VisualDSP++ for the first time, navigate to the VisualDSP++ environment via the Start –>Programs menu.

   The main window appears. Note that VisualDSP++ does not connect to any session. Skip the rest of this step to step 3.

   If you have run VisualDSP++ previously, the last opened session appears on the screen. You can override the default behavior and force VisualDSP++ to start a new session by pressing and holding down the Ctrl key while starting VisualDSP++. Do not release the Ctrl key until the Session Wizard appears on the screen. Go to step 4.
3. To connect to a new EZ-KIT Lite session, start Session Wizard by selecting one of the following.
   - From the Session menu, New Session.
   - From the Session menu, Session List. Then click New Session from the Session List dialog box.
   - From the Session menu, Connect to Target.
4. The Select Processor page of the wizard appears on the screen. Ensure Blackfin is selected in Processor family. In Choose a target processor, select ADSP-BF538F. Click Next.

5. The Select Connection Type page of the wizard appears on the screen. Select EZ-KIT Lite and click Next.
6. The Select Platform page of the wizard appears on the screen. In the Select your platform list, select ADSP-BF538F EZ-KIT Lite via Debug Agent. In Session name, highlight or specify the session name.

   The session name can be a string of any length; although, the box displays approximately 32 characters. The session name can include space characters. If you do not specify a session name, VisualDSP++ creates a session name by combining the name of the selected platform with the selected processor. The only way to change a session name later is to delete the session and to open a new session.

   Click Next.
7. The Finish page of the wizard appears on the screen. The page displays your selections. If you are satisfied, click Finish. If not, click Back to make changes.

To disconnect from a session, click the disconnect button  or select Session–>Disconnect from Target.

To delete a session, select Session –> Session List. Select the session name from the list and click Delete. Click OK.

Evaluation License Restrictions

The ADSP-BF538F EZ-KIT Lite installation is part of the VisualDSP++ installation. The EZ-KIT Lite is a licensed product that offers an unrestricted evaluation license for the first 90 days. Once the initial unrestricted 90-day evaluation license expires:

- VisualDSP++ allows a connection to the ADSP-BF538F EZ-KIT Lite via the USB debug agent interface only. Connections to simulators and emulation products are no longer allowed.
- The linker restricts a users program to 20 KB of internal memory for code space with no restrictions for data space.

The EZ-KIT Lite hardware must be connected and powered up to use VisualDSP++ with a valid evaluation or permanent license.

Refer to the *VisualDSP++ Installation Quick Reference Card* for details.

Memory Map

The ADSP-BF538F processor has internal SRAM that can be used for instruction or data storage. SRAM configuration details can be found in the *ADSP-BF538/ADSP-BF538F Blackfin Processor Hardware Reference*.

The ADSP-BF538F EZ-KIT Lite board includes two types of external memory: SDRAM and flash.

The size of SDRAM is 64 Mbytes (32M x 16-bit). The processor's memory select pin, ~SMS0, is configured for SDRAM.

The size of the external flash memory is 4 Mbytes (2M x 16-bits), and the size of the internal flash memory is 1 Mbyte. The processor's asynchronous memory select pins (~AMS3-0) are configured for flash memory. Any of the ~AMS signals can be mapped to internal or external flash memory.

Table 1-1. EZ-KIT Lite Evaluation Board Memory Map

Start Address		End Address	Content
External Memory	0x0000 0000	0x03FF FFFF	SDRAM bank 0 (SDRAM). See "SDRAM Interface" on page 1-8.
	0x2000 0000	0x200F FFFF	ASYNC memory bank 0. See "Flash Memory" on page 1-10.
	0x2010 0000	0x201F FFFF	ASYNC memory bank 1. See "Flash Memory" on page 1-10.
	0x2020 0000	0x202F FFFF	ASYNC memory bank 2. See "Flash Memory" on page 1-10.
	0x2030 0000	0x203F FFFF	ASYNC memory bank 3. See "Flash Memory" on page 1-10.
	All other locations		Not used
Internal Memory	0xFF80 0000	0xFF80 3FFF	Data bank A SRAM 16 KB
	0xFF80 4000	0xFF80 7FFF	Data bank A SRAM/CACHE 16 KB
	0xFF90 0000	0xFF90 7FFF	Data bank B SRAM 16 KB
	0xFF90 4000	0xFF90 7FFF	Data bank B SRAM/CACHE 16 KB
	0xFFA0 0000	0xFFA0 7FFF	Instruction bank A SRAM 32 KB
	0xFFA1 0000	0xFFA1 3FFF	Instruction bank B SRAM 16 KB
	0xFFA0 8000	0xFFA0 BFFF	Instruction SRAM/CACHE 16 KB
	0xFFB0 0000	0xFFB0 0FFF	Scratch pad SRAM 4 KB
	0xFFC0 0000	0xFFDF FFFF	System MMRs 2 MB
	0xFFE0 0000	0xFFFF FFFF	Core MMRs 2 MB
	All other locations		Reserved

SDRAM Interface

The three SDRAM control registers must be initialized in order to use the MT48LC32M8A2 32M x 16 bits (64 MB) SDRAM memory. When you are in a VisualDSP++ session and connect to the EZ-KIT Lite board, the

SDRAM registers are configured automatically through the debugger each time the processor is reset. The values in Table 1-2 are used whenever SDRAM bank 0 is accessed through the debugger (for example, when viewing memory windows or loading a program). The numbers were derived for maximum flexibility and work for a system clock frequency between 54 MHz and 133 MHz.

Table 1-2. EZ-KIT Lite Session SDRAM Default Settings[1]

Register	Value	Function
EBIU_SDGCTL	0x0091998D	Calculated with SCLK = 133 MHz 16-bit data path External buffering timing disabled t_{WR} = 2 SCLK cycles t_{RCD} = 3 SCLK cycles t_{RP} = 3 SCLK cycles t_{RAS} = 6 SCLK cycles pre-fetch disabled CAS latency = 3 SCLK cycles SCLK1 disabled
EBIU_SDBCTL	0x00000025	Bank 0 enabled Bank 0 size = 64 MB Bank 0 column address width = 10 bits
EBIU_SDRRC	0x000003A0	Calculated with SCLK = 54 MHz RDIV = 416 clock cycles

1 54 MHz <=SCLK <= 133 MHz.

To re-write the EBIU_SDGCTL register within the user code, first, place the chip in self-refresh (see the *ADSP-BF538/ADSP-BF538F Blackfin Processor Hardware Reference*). Clearing the appropriate checkbox on the Target Options dialog box, which is accessible through the Settings pull-down menu, disables the automatic and allows manual configuration. For more information, see online Help.

Automatic configuration of SDRAM is not optimized for any SCLK frequency. Table 1-3 shows optimized configuration for the SDRAM registers using a 125 MHz and 133 MHz SCLK. Only the EBIU_SDRRC register needs to be modified in the user code to achieve maximum performance.

Table 1-3. SDRAM Optimum Settings

Register	SCLK = 133 MHz (CCLK = 400 MHz)	SCLK = 125 MHz (CCLK = 500 MHz)
EBIU_SDGCTL	0x0091 998D	0x0091 998D
EBIU_SDBCTL	0x0000 0025	0x0000 0025
EBIU_SDRRC	0x0000 0408	0x0000 03A0

An example program is included in the EZ-KIT Lite installation directory to demonstrate the SDRAM memory setup.

Flash Memory

The flash memory interface of the ADSP-BF538F EZ-KIT Lite can connect to an external 4 MB (2M x 16-bits) ST Micro M29W320EB device or the 1 MB internal flash memory. The size and connections of flash memory are controlled by the flash address range switch (SW6) and the flash chip enable (FCE) switch (SW14). See “Flash Enable Switch (SW6)” on page 2-11 and “FCE Enable Switch (SW14)” on page 2-12.

The default for the SW6 switch is all positions ON, which allows the user to have access to the full 4 MB of the external flash memory. The default for the SW14 switch is all positions OFF, which allows the user to have access to the full 4 MB of the external flash memory. Each ~AMS signal accounts for 1 MB of flash memory. The amount of available flash memory decreases as ~AMS signals are turned OFF.

Example code is provided in the EZ-KIT Lite installation directory to demonstrate how to program flash memory.

Table 1-4 shows a sample value for the asynchronous memory configuration register, EBIU_AMBCTL0.

Table 1-4. Asynchronous Memory Control Register Setting Example

Register	Value	Function
EBIU_AMBCTL0	0x7BB07BB0	Timing control for banks 1 and 0

CAN Interface

The Controller Area Network interface contains a Philips TJA1041 high-speed CAN transceiver. The PD9 programmable flag connects to the error and power-on indication output (ERR). The PC1 of the processor connects to the receive data output (RXD), and PC0 connects to the transmit data input (TXD).

The CAN interface can be disconnected from the processor by turning positions 1 though 4 of the SW2 switch OFF. When in the OFF position, the signals can be used elsewhere on the board. See "CAN Enable Switch (SW2)" on page 2-10 for more information.

The CAN interface contains two 4-position modular connectors (see "CAN Connectors (J5 and J11)" on page 2-21).

Example programs are included in the EZ-KIT Lite installation directory to demonstrate CAN circuit operation.

ELVIS Interface

This EZ-KIT Lite board contains the National Instruments ELVIS interface. The interface features the DC voltage and current measurement modules, oscilloscope and bode analyzer modules, function generator, arbitrary waveform generator, and digital IO.

The ELVIS interface is a NI LabVIEW-based design and prototype environment for university science and engineering laboratories. The ELVIS interface consists of the LabVIEW-based virtual instruments, a multifunction data acquisition (DAQ) device, and a custom-designed bench-top workstation and prototype board. This combination provides a ready-to-use suite of instruments found in most educational laboratories. Because the interface is based on the LabVIEW and provides complete data acquisition and prototyping capabilities, the system is ideal for academic coursework that range from lower-division classes to advanced project-based curriculums.

For more information on ELVIS and example demonstration programs, visit National Instruments Web site at www.ni.com.

Audio Interface

The audio circuit of the EZ-KIT Lite consists of an AD1871 analog-to-digital converter (ADC) and an AD1854 digital-to-analog converter (DAC). The audio circuit provides one channel of stereo input and one channel of stereo output via 3.5 mm stereo jacks. The SPORT0 interface of the processor is linked with the stereo audio data input and output pins of the audio circuit.

The frame sync and bit clocks are generated from the ADC and feed to the processor because the ADC is operating in master mode. The audio interface samples data at a 48 kHz sample rate. The serial data interface operates in 2-wire interface (TWI) mode and connects to SPORT0 of the processor.

The audio interface can be disconnected from the SPORT0 by turning positions 1 and 5 of the SW7 switch OFF. When in the OFF position, the SPORT0 signals can be used on the SPORT0 connector (P6) or on the expansion interface (see "SPORT0 and SPORT1 Connectors (P6 and P7)" on page 2-23 and "Audio Enable Switch (SW7)" on page 2-12 for more information).

Example programs are included in the EZ-KIT Lite installation directory to demonstrate audio circuit operation.

LEDs and Push Buttons

The EZ-KIT Lite provides four push buttons and five LEDs for general-purpose IO.

The five LEDs, labeled LED2 through LED6, are accessed via the PC5–9 processor pins. For information on how to program the pins, refer to the *ADSP-BF538/ADSP-BF538F Blackfin Processor Hardware Reference*.

The four general-purpose push button are labeled SW10 through SW13. A status of each individual button can be read through the processor's programmable flag inputs, PF0–3. The signal reads 1 when a corresponding switch is being pressed-on. When the switch is released, the signal reads 0. A connection between the push button and programmable flag input is established through the DIP switch, SW5. See "LEDs and Push Buttons" on page 2-17 for details.

An example program is included in the EZ-KIT Lite installation directory to demonstrate functionality of the LEDs and push buttons.

Example Programs

Example programs are provided with the ADSP-BF538F EZ-KIT Lite to demonstrate various capabilities of the evaluation board. These programs are installed with the EZ-KIT Lite software and can be found in the `<install_path>\Blackfin\Examples\ADSP-BF538F EZ-KIT Lite` VisualDSP++ directory. Please refer to the readme file provided with each example for more information.

Background Telemetry Channel

The ADSP-BF538F USB debug agent supports the background telemetry channel (BTC), which facilitates data exchange between VisualDSP++ and the processor without interrupting processor execution.

The BTC allows you to view a variable as it is updated or changed, all while the processor continues to execute. For increased performance of the BTC, including faster reading and writing, please check our latest line of Blackfin processor emulators at: `http://www.analog.com/processors/blackfin/evaluationDevelopment/crosscore/`. For more information about the background telemetry channel, see the *VisualDSP++ User's Guide* or online Help.

2 ADSP-BF538F EZ-KIT LITE HARDWARE REFERENCE

This chapter describes the hardware design of the ADSP-BF538F EZ-KIT Lite board. The following topics are covered.

- "System Architecture" on page 2-2
  Describes the ADSP-BF538F EZ-KIT Lite board configuration and explains how the board components interface with the processor.
- "Jumper and Switch Settings" on page 2-9
  Shows the locations and describes the configuration jumpers and switches.
- "LEDs and Push Buttons" on page 2-17
  Shows the locations and describes the LEDs and push buttons.
- "Connectors" on page 2-20
  Shows the locations and provides part numbers for the on-board connectors. In addition, the manufacturer and part number information is provided for the mating parts.

System Architecture

This section describes the processor's configuration on the EZ-KIT Lite board.

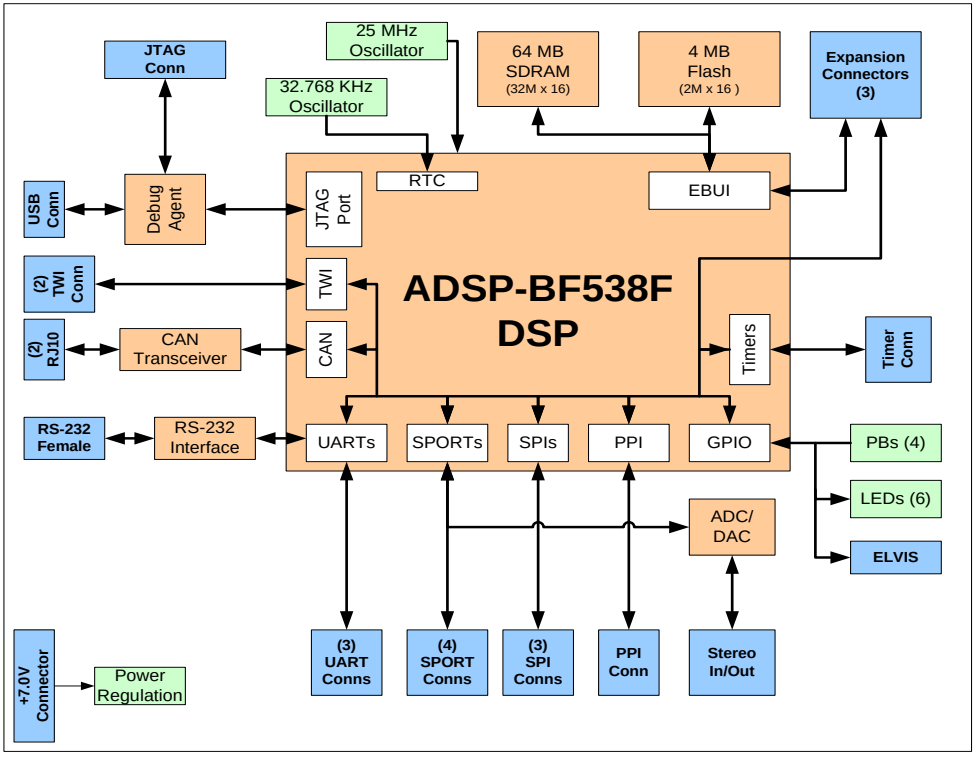

Figure 2-1. System Architecture

This EZ-KIT Lite is designed to demonstrate capabilities of the ADSP-BF538F Blackfin processor. The processor has an IO voltage of 3.3V. The core voltage of the processor is supplied by the internal voltage regulator.

The core voltage and the core clock rate can be set on the fly by the processor. The input clock is 25 MHz. A 32.768 kHz crystal supplies the real-time clock (RTC) inputs of the processor. The default boot mode for the processor is flash boot. See "Boot Mode Select Switch (SW3)" on page 2-13 for information about changing the default boot mode.

External Bus Interface Unit

The external bus interface unit (EBIU) connects external memory to the ADSP-BF538F processor. The unit includes a 16-bit wide data bus, an address bus, and a control bus. On the EZ-KIT Lite, the EBIU connects to the SDRAM, flash memory, and expansion interfaces.

The 64 Mbytes (32M x 16 bits) of SDRAM connect to the synchronous memory select 0 pin (~SMS0). Refer to "SDRAM Interface" on page 1-8 for information about SDRAM configuration. Note that SDRAM clock is the processor's clock out (CLK OUT), which must not exceed 133 MHz.

The flash memory device connects to the asynchronous memory select signals, ~AMS3 through ~AMS0. The device provides a total of 4 MB of external flash memory or 1 MB of internal flash memory. The processor can use flash memory for both booting and storing information during a standard mode of operation. Refer to "Flash Memory" on page 1-10 for details.

All of the address, data, and control signals are available externally via the expansion interface (J1–3). The pinout of these connectors can be found in "ADSP-BF538F EZ-KIT Lite Schematic" on page B-1.

SPORT0 Interface

SPORT0 connects to the audio circuit, SPORT0 connector (P6), and expansion interface. The audio circuit uses the primary data transmit and receive pins to input and output data from the audio input and outputs.

SPORT1 and SPORT2 of the processor connect to the SPORT connectors (P3 and P4) and expansion interface.

The pinout of the SPORT interface and expansion interface connectors can be found in "ADSP-BF538F EZ-KIT Lite Schematic" on page B-1.

SPI Interface

The serial peripheral interface (SPI) of the processor connects to the SPI connectors (P1, P2, and P9) and expansion interface.

UART Interface

The UART interface of the processor connects to the UART connectors (P12, P14, and P15) and expansion interface.

Programmable Flags

The processor has 53 general-purpose input/output (GPIO) signals spread across four ports (PC, PD, PE, and PF). The pins are multi-functional and depend on the processor setup. Table 2-1 shows how the programmable flag pins are used on the EZ-KIT Lite.

Table 2-1. Programmable Flag Connections

Processor Pin	Other Processor Function	EZ-KIT Lite Function
PC0	CANTX	UART0 CTS/CAN transmit
PC1	CANRX	UART0 CTS/CAN receive

Table 2-1. Programmable Flag Connections (Cont'd)

PF15	PPI_D4	Not used

UART Port

The universal asynchronous receiver/transmitter (UART) port of the processor connects to the ADM3202 RS-232 line driver as well as to the expansion interface. The RS-232 line driver connects to the DB9 female connector, providing an interface to a PC and other serial devices.

Expansion Interface

The expansion interface consists of three 90-pin connectors. Table 2-2 shows the interfaces each connector provides. For the exact pinout of the connectors, refer to "ADSP-BF538F EZ-KIT Lite Schematic" on page B-1. The mechanical dimensions of the connectors can be obtained from Technical or Customer Support.

Analog Devices offers many EZ-Extender products that plug on to the expansion interface. For more information on these products, visit the Analog Devices Web site at www.analog.com.

Table 2-2. Expansion Interface Connectors

Connector	Interfaces
J1	5V, GND, address, data, PPI
J2	3.3V, GND, SPI, NMI, TMR2–0, SPORT0, SPORT1, PF15–0, EBUI control signals
J3	5V, 3.3V, GND, UART, flash IO, reset, audio control signals

Limits to the current and to the interface speed must be taken into consideration when using the expansion interface. The maximum current limit is dependent on the capabilities of the used regulator. Additional circuitry also can add extra loading to signals, decreasing their maximum effective speed.

Analog Devices does not support and is not responsible for the effects of additional circuitry.

JTAG Emulation Port

The JTAG emulation port allows an emulator to access the processor's internal and external memory through a 6-pin interface. The JTAG emulation port of the processor connects also to the USB debugging interface. When an emulator connects to the board at ZP4, the USB debugging interface is disabled. See "JTAG Connector (ZP4)" on page 2-23 for more information about the connector.

To learn more about available emulators, contact Analog Devices (see "Processor Product Information").

Jumper and Switch Settings

The jumper and switch locations are shown in Figure 2-2.

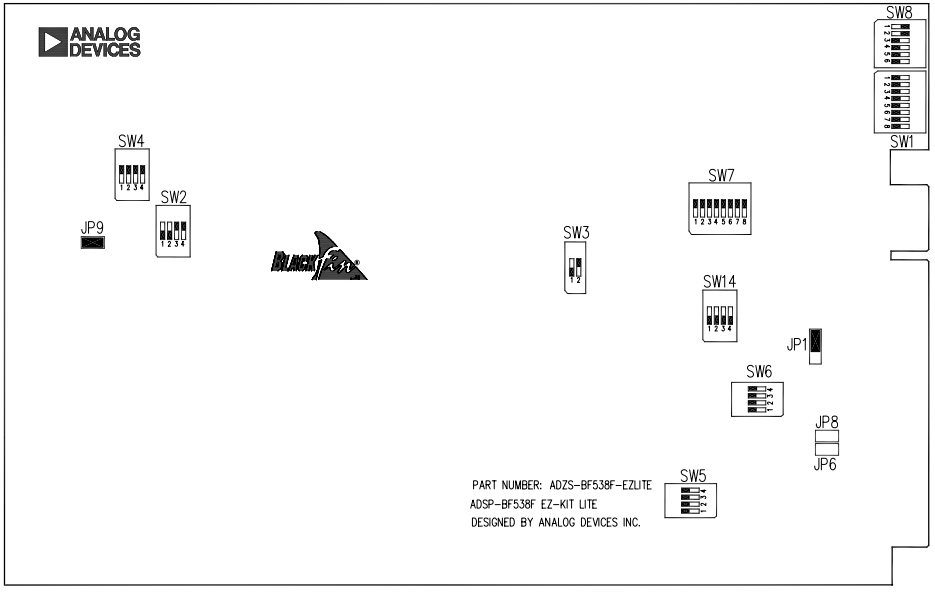

Figure 2-2. Jumper and Switch Locations

CAN Enable Switch (SW2)

The Controller Area Network (CAN) enable switch (SW2) disconnects CAN signals from the GPIO pins of the processor. When the SW2 switch is in the OFF position, the associated GPIO signals (see Table 2-3) can be used on the expansion interface.

Table 2-3. CAN Enable Switch (SW2)

CAN Signal	SW2 Switch Position (Default)	Processor Signal
ENABLE	1 (ON)	NU
STANDBY	2 (ON)	NU
ERROR	3 (ON)	PD9
RECEIVE DATA	4 (ON)	PC1

UART Enable Switch (SW4)

The UART enable switch (SW4) disconnects UART signals from the GPIO pins of the processor. When the switch is in the OFF position, the associated GPIO signals (see Table 2-4) can be used on the expansion interface.

Table 2-4. UART Enable Switch (SW4)

EZ-KIT Lite Signal	SW4 Switch Position (Default)	Processor Signal
CTS	1 (ON)	PC0
RX0	2 (ON)	NU
RTS	3 (ON)	PC1
LOOPBACK	4 (OFF)	NU

Push Button Enable Switch (SW5)

The push button enable switch (SW5) disconnects the associated signal and the push button circuit drivers from the GPIO pins of the processor. When the SW5 switch is in the OFF position, the GPIO signal (see Table 2-5) can be used on the expansion interface.

Table 2-5. Push Button Enable Switch (SW5)

Push Button	SW5 Switch Position (Default)	Processor Signal
PB1 (SW13)	1 (ON)	PF0
PB2 (SW12)	2 (ON)	PF1
PB3 (SW11)	3 (ON)	PF2
PB4 (SW10)	4 (ON)	PF3

Flash Enable Switch (SW6)

The flash enable switch (SW6) disconnects the ~AMS signals from the external flash memory, allowing other devices to utilize the signals via the expansion interface. For each switch listed in Table 2-6 that is turned OFF, the size of available flash memory is reduced by 1 MB.

Table 2-6. Flash Enable Switch (SW6)

Processor Signal	SW6 Switch Position (Default)
~AMS0	1 (ON)
~AMS1	2 (ON)
~AMS2	3 (ON)
~AMS3	4 (ON)

FCE Enable Switch (SW14)

The flash chip enable (FCE) switch (SW14) selects which ~AMS signals connect to the internal flash memory. Since the internal memory is 1 MB, only one ~AMS signal must be connected at a time. For each switch listed in Table 2-7 that is turned ON, the size of available flash memory is reduced by 1 MB.

Table 2-7. FCE Enable Switch (SW14)

Processor Signal	SW14 Switch Position (Default)
~AMS0	1 (OFF)
~AMS1	2 (OFF)
~AMS2	3 (OFF)
~AMS3	4 (OFF)

Audio Enable Switch (SW7)

The audio enable switch (SW7) disconnects the audio signals from the processor (positions 1–5) and determines how the clock for the audio circuit generates and connects (positions 6–8). Position 8 determines if the ADC is in master or slave mode. When in master mode (position 8 is ON), the ADC generates the clock. When in slave mode (position 8 is OFF), the processor generates the clock. Positions 6 and 7 connect together the transmit and receive clocks (see Table 2-8).

Table 2-8. Audio Enable Switch (SW7)

EZ-KIT Lite Signal	SW7 Switch Position (Default)	Processor Signal
DR0PRI	1 (ON)	DR0PRI
RSCLK0	2 (ON)	RSCLK0
RFS0	3 (ON)	RFS0

Table 2-8. Audio Enable Switch (SW7) (Cont'd)

EZ-KIT Lite Signal	SW7 Switch Position (Default)	Processor Signal
TSCLK0	4 (ON)	TSCLK0
TFS0	5 (ON)	TFS0
Clock loopback	6 (ON)	NU
FS loopback	7 (ON)	NU
ADC master/slave	8 (ON)	NU

Boot Mode Select Switch (SW3)

The rotary switch (SW3) determines the boot mode of the processor. Table 2-9 shows the available boot mode settings. By default, the ADSP-BF538F processor boots from the on-board flash memory.

Table 2-9. Boot Mode Select Switch (SW3)

SW3 Position 1	SW3 Position 2	Processor Boot Mode
ON	ON	Execute from 16-bit external memory
ON	OFF	Boot from 16-bit flash memory (default)
OFF	ON	Boot from SPI serial master
OFF	OFF	Boot from SPI serial slave

PPI Direction Control (JP1)

The PPI direction control jumper (JP1) is used when the board connects to a Blackfin AV EZ-Extender. JP1 allows the GPIO signal PD7 to control the direction of the PPI bus via a software flag. The default is positions 1 and 2. When connected to the extender, JP1 must be placed in positions 2 and 3.

UART Loop Jumper (JP9)

The UART loop jumper (JP9) is for looping the transmit and receive signals. The default is OFF.

ELVIS Oscilloscope Configuration Switch (SW1)

The oscilloscope configuration switch (SW1) determines which audio circuit signals connect to channels A and B of the oscilloscope. The switch is used when the board connects to the Educational Laboratory Virtual Instrumentation Suite (ELVIS) station (see "ELVIS Interface" on page 1-12). Each channel must have only one signal selected at a time (see Table 2-10).

Table 2-10. Oscilloscope Configuration Switch (SW1)

Channel	SW1 Switch Position (Default)	Audio Circuit Signal
A	1 (OFF)	AMP_LEFT_IN
A	2 (OFF)	AMP_RIGHT_IN
A	3 (OFF)	LEFT_OUT
A	4 (OFF)	RIGHT_OUT
B	5 (OFF	AMP_LEFT_IN
B	6 (OFF)	AMP_RIGHT_IN
B	7 (OFF)	LEFT_OUT
B	8 (OFF)	RIGHT_OUT

ELVIS Function Generator Configuration Switch (SW8)

The function generator configuration switch (SW8) controls signals connecting to the left and right input signals of the audio interface. The SW8 switch is used when the board connects to the ELVIS station (see "ELVIS Interface" on page 1-12). Each channel must have only one signal selected at a time, as described in Table 2-11.

Table 2-11. Function Generator Configuration Switch (SW8)

Channel	SW8 Switch Position (Default)	Audio Circuit Signal
AMP_LEFT_IN	1 (ON)	LEFT_IN
AMP_RIGHT_IN	2 (ON)	RIGHT_IN
AMP_LEFT_IN	3 (OFF)	DAC0
AMP_RIGHT_IN	4 (OFF)	DAC1
AMP_LEFT_IN	5 (OFF)	FUNCT_OUT
AMP_RIGHT_IN	6 (OFF)	FUNCT_OUT

ELVIS Voltage Selection Jumper (JP6)

The ELVIS voltage selection jumper (JP6) is used to select the power source for the EZ-KIT Lite. In a standard mode of operation, the board receives its power from an external power supply. When JP6 is installed, the board is powered from an ELVIS station, and no external power supply is required. The jumper setting is shown in Table 2-12.

Table 2-12. ELVIS Voltage Selection Jumper (JP6)

JP6 Setting	Mode
OFF	Powered from an external power supply (default)
ON	Powered from an ELVIS station

The external power supply must be disconnected from the board when JP6 is installed. Otherwise, the power supply can cause damage to the EZ-KIT Lite board and ELVIS unit.

ELVIS Select Jumper (JP8)

The ELVIS select jumper (JP8) configures the EZ-KIT Lite's connection to an ELVIS station (see "ELVIS Interface" on page 1-12). When JP8 is installed, the connections to the push buttons and LED are re-directed to the ELVIS station, instead of the processor. The jumper setting is shown in Table 2-13.

Table 2-13. ELVIS Select Jumper (JP8)

JP8 Setting	Mode
OFF	Not connected to an ELVIS station (default)
ON	Connected to an ELVIS station

LEDs and Push Buttons

This section describes functionality of the LEDs and push buttons. Figure 2-3 shows the locations of the LEDs and push buttons.

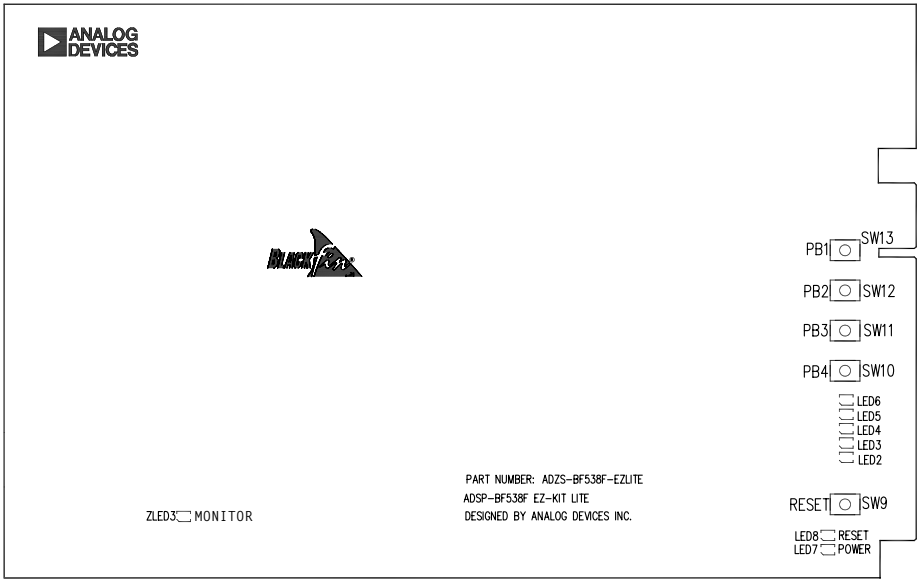

Figure 2-3. LED and Push Button Locations

Reset Push Button (SW9)

The RESET push button resets all of the ICs on the board. One exception is the USB interface chip. The chip is not being reset when the push button is pressed after the USB cable has been plugged in and communication with the PC has been initialized correctly. After USB communication has been initialized, the only way to reset the USB chip is by powering down the board.

Programmable Flag Push Buttons (SW10–13)

Four push buttons, SW10–13, are provided for general-purpose user input. The buttons connect to the PF0-3 programmable flag pins of the processor. The push buttons are active high and, when pressed, send a high (1) to the processor. Refer to "LEDs and Push Buttons" on page 1-13 for more information on how to use the flags to program the processor. The push button enable switch (SW5) is capable of disconnecting the push buttons from its corresponding PF signal (refer to "Push Button Enable Switch (SW5)" on page 2-11). The programmable flag signals and associated switches are shown in Table 2-14.

Table 2-14. Programmable Flag Switches

Processor Programmable Flag Pin	Push Button Reference Designator
PF0	SW13
PF1	SW12
PF2	SW11
PF3	SW10

Power LED (LED7)

When LED7 is lit (green), it indicates that power is being properly supplied to the board.

Reset LED (LED8)

When LED8 is lit, it indicates that the master reset of all the major ICs is active.

User LEDs (LED2–6)

Five LEDs connect to five general-purpose IO pins of the processor (see Table 2-15). The LEDs are active high and are lit by writing a 1 to the correct PC signal. Refer to "LEDs and Push Buttons" on page 1-13 for more information about how to use flash memory when programming the LEDs.

Table 2-15. User LEDs

LED Reference Designator	Processor Programmable Flag Pin
LED2	PC5
LED3	PC6
LED4	PC7
LED5	PC8
LED6	PC9

USB Monitor LED (ZLED3)

The USB monitor LED (ZLED3) indicates that USB communication has been initialized successfully, and you can connect to the processor using a VisualDSP++ EZ-KIT Lite session. This takes approximately 15 seconds. If the LED does not light, try cycling power on the board and/or re-installing the USB driver (see the *VisualDSP++ Installation Quick Reference Card*).

When VisualDSP++ is actively communicating with the EZ-KIT Lite target board, the LED can flicker, indicating communications handshake.

Connectors

This section describes the connector functionality and provides information about mating connectors. The connector locations are shown in Figure 2-4.

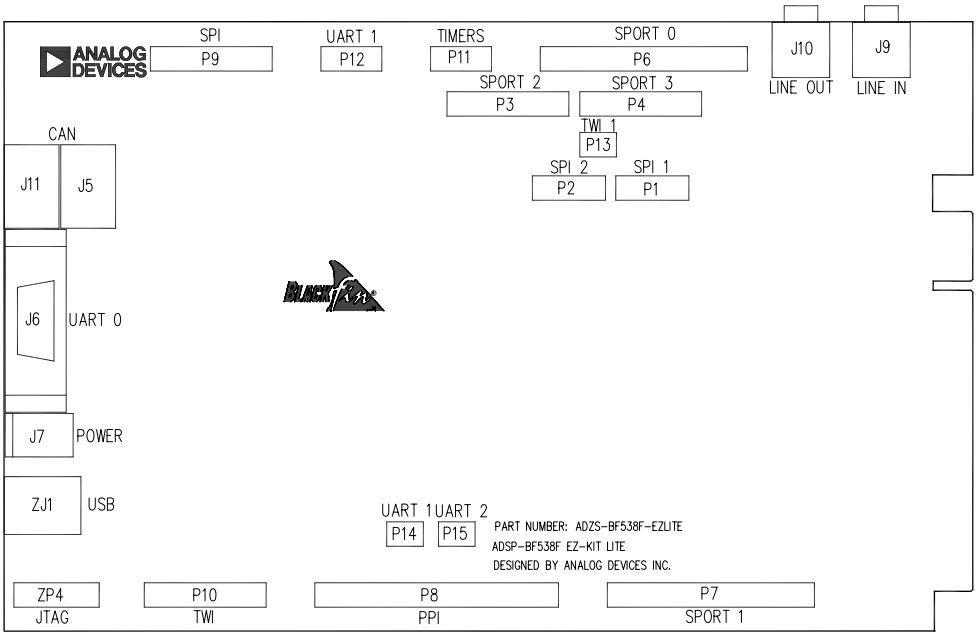

Figure 2-4. Connector Locations

Audio Connectors (J9 and J10)

Part Description	Manufacturer	Part Number
3.5 mm stereo jack	A/D ELECTRONICS	ST323-5
Mating Cable (shipped with EZ-KIT Lite)		
3.5 mm stereo interconnect cable	RANDOM	10A3-01106
3.5 mm headphones	KOSS	UR5

CAN Connectors (J5 and J11)

Part Description	Manufacturer	Part Number
Modular jack	AMP	5558872-1
Mating Cable		
4-conductor modular jack cable	L-COM	TSP3044

RS-232 Connector (J6)

Part Description	Manufacturer	Part Number
DB9, female, vertical mount	NORCOMP	191-009-213-L-571
Mating Cable		
2m female-to-female cable	DIGI-KEY	AE1020-ND

Power Connector (J7)

The power connector provides all of the power necessary to operate the EZ-KIT Lite board.

Part Description	Manufacturer	Part Number
2.5 mm power jack	SWITCHCRAFT	RAPC712X
Mating Power Supply (shipped with EZ-KIT Lite)		
7V power supply	CUI INC.	DMS070214-P6P-SZ

Expansion Interface Connectors (J1–3)

Three board-to-board connector footprints provide signals for most of the processor's peripheral interfaces. The connectors are located at the bottom of the board. For more information about the interface, see "Expansion Interface" on page 2-8. For the availability and pricing of the `J1`, `J12`, and `J3` connectors, contact Samtec.

Part Description	Manufacturer	Part Number
90-position 0.05" spacing, SMT	SAMTEC	SFC-145-T2-F-D-A
Mating Connector		
90-position 0.05" spacing (through hole)	SAMTEC	TFM-145-x1 series
90-position 0.05" spacing (surface mount)	SAMTEC	TFM-145-x2 series
90-position 0.05" spacing (low cost)	SAMTEC	TFC-145 series

JTAG Connector (ZP4)

The JTAG header is the connecting point for a JTAG in-circuit emulator pod. When an emulator connects to the JTAG header, the USB debug interface is disabled.

Pin 3 is missing to provide keying. Pin 3 in the mating connector should have a plug.

When using an emulator with the EZ-KIT Lite board, follow the connection instructions provided with the emulator.

SPORT0 and SPORT1 Connectors (P6 and P7)

The pinout of the P6 and P7 connectors can be found in "ADSP-BF538F EZ-KIT Lite Schematic" on page B-1.

Part Description	Manufacturer	Part Number
IDC header	FCI	68737-434HLF
Mating Connector		
IDC socket	DIGI-KEY	S4217-ND

PPI Connector (P8)

The pinout of the P8 connector can be found in "ADSP-BF538F EZ-KIT Lite Schematic" on page B-1.

Part Description	Manufacturer	Part Number
IDC header	FCI	68737-440HLF
Mating Connector		
IDC socket	DIGI-KEY	S4220-ND

SPI Connector (P9)

The pinout of the P9 connector can be found in "ADSP-BF538F EZ-KIT Lite Schematic" on page B-1.

Part Description	Manufacturer	Part Number
IDC header	FCI	68737-420HLF
Mating Connector		
IDC socket	DIGI-KEY	S4210-ND

2-Wire Interface Connector (P10)

The pinout of the P10 connector can be found in "ADSP-BF538F EZ-KIT Lite Schematic" on page B-1.

Part Description	Manufacturer	Part Number
IDC header	FCI	68737-420HLF
Mating Connector		
IDC socket	DIGI-KEY	S4210-ND

TIMERS Connector (P11)

The pinout of the P11 connector can be found in "ADSP-BF538F EZ-KIT Lite Schematic" on page B-1.

Part Description	Manufacturer	Part Number
IDC header	FCI	68737-410HLF
Mating Connector		
IDC socket	DIGI-KEY	S4205-ND

UART1 Connector (P12)

The pinout of the P12 connector can be found in "ADSP-BF538F EZ-KIT Lite Schematic" on page B-1.

Part Description	Manufacturer	Part Number
IDC header	FCI	68737-410HLF
Mating Connector		
IDC socket	DIGI-KEY	S4205-ND

A ADSP-BF538F EZ-KIT LITE BILL OF MATERIALS

The bill of materials corresponds to "ADSP-BF538F EZ-KIT Lite Schematic" on page B-1.

Ref.	Qty.	Description	Reference Designator	Manufacturer	Part Number
1	1	74LVC14A SOIC14	U37	TI	74LVC14AD

Processors

Explore, Evaluate, Design

Everything you need, from Software Development Tools, Third Party Support, Technical Library and more...

- Download the Embedded Processing and DSP Selection Guide 2008 (pdf)
- View all Products

Blackfin

Blackfin® Processors embody a new breed of 16/32-bit embedded processor, ideally suited for products where a convergence of capabilities are necessary – multi-format audio, video, voice and image processing...

Go to Blackfin

SHARC

SHARC® Processors, dominate the floating-point Digital Signal Processing market, delivering exceptional core and memory performance complemented by outstanding I/O throughput. Starting at 319 MFLOPS per dollar...

Go to SHARC

TigerSHARC

TigerSHARC® Processors provide the highest performance density for multiprocessing applications with peak performance well above a billion floating-point operations per second...

Go to TigerSHARC

ADSP-21xx

ADSP-21xx Processors, are code- and pin-compatible families of Digital Signal Processors with performance up to 160MHz and power as low as 184 micro-amps. The ADSP-21XX family is ideal for...

Technical Support

Analog Devices' online technical support provides 24 x 7 access to an extensive and growing list of application notes, technical documentation, ADI's third party developers database, and much more.

Embedded Processing & DSP Knowledge Base
Use the Embedded Processing & DSP Knowledge Base to help you find answers to a broad range of technical questions regarding our products.

Technical Library
A comprehensive Embedded Processor & DSP technical library to assist you with your design projects.

Contact Embedded Processing & DSP
Complete the technical request form and submit it to our support team.

Part Numbering (pdf, 139,264 bytes)
View an explanation of the Embedded Processing & DSP part numbering system

Complementary Parts Guide
View a listing of other ADI parts that are compatible with ADI Embedded Processors & DSPs.

Forums: Discussion Groups on the Web
A listing of popular discussion groups for Embedded Processors & DSPs.

Quality
Quality information on ADI parts including RoHS Compliance, Quality Certificates, Reliability Data and more

IC Anomalies
View the latest Embedded Processor and DSP anomaly sheets.

VisualDSP++ Tools Anomalies
View the latest CROSSCORE Development tools anomalies.

myAnalog

Streamline your research and shorten your development cycle:

- Get the product and technical information you need, quickly and easily
- Stay informed on selected product updates and status changes
- Choose to receive weekly email updates relevant to you

Processors

Explore, Evaluate, Design

Everything you need, from Software Development Tools, Third Party Support, Technical Library and more...

- Download the Embedded Processing and DSP Selection Guide 2008 (pdf)
- View all Products

Blackfin

Blackfin® Processors embody a new breed of 16/32-bit embedded processor, ideally suited for products where a convergence of capabilities are necessary – multi-format audio, video, voice and image processing...

Go to Blackfin

SHARC

SHARC® Processors, dominate the floating-point Digital Signal Processing market, delivering exceptional core and memory performance complemented by outstanding I/O throughput. Starting at 319 MFLOPS per dollar...

Go to SHARC

TigerSHARC

TigerSHARC® Processors provide the highest performance density for multiprocessing applications with peak performance well above a billion floating-point operations per second...

Go to TigerSHARC

ADSP-21xx

ADSP-21xx Processors, are code- and pin-compatible families of Digital Signal Processors with performance up to 160MHz and power as low as 184 micro-amps. The ADSP-21XX family is ideal for...
