Low Power Consumption 40uA (typ)

General Description

TS4264G is a 5V low-drop fixed-voltage regulator in an SOT-223 and SOP-8 package. The IC regulates an input voltage in the range of $5.5V < Vin < 45V$ to $Vout(rated) = 5.0V$. The maximum output current is more than 150mA. This IC is designed with short circuit-proof and features temperature protection that disables the circuit at over-temperature.

Features

- ◊ Fixed output voltage 5V
- ◊ Output voltage tolerance +/- 2 %
- ◊ 150mA current capability
- ◊ Ultra low drop out voltage
- ◊ Very low current consumption 40uA (typ)
- ◊ Over temperature protection
- ◊ Short-circuit proof
- ◊ Reverse polarity proof
- ◊ Wide temperature range
- ◊ Suitable for use in automotive electronics

Typical Application Circuit

Application Information

Dimensioning Information on External Components

The input capacitor C_{in} is necessary for compensating line influences. Using a resistor of approx. 1Ω in series with C_{in} , the oscillating of input inductivity and input capacitance can be clamped. The output capacitor C_{out} is necessary for the stability of the regulating circuit. Stability is guaranteed at values $C_{out} \geq 10\mu F$ and an ESR $\leq 4\Omega$ within the operating temperature range.

Circuit Description

The control amplifier compares a reference voltage, which is kept highly precise by resistance adjustment, to a voltage that is proportional to the output voltage and drives the base of the series transistor via a buffer. Saturation control, working as a function of load current, prevents any over-saturation of the power element. The IC is additionally protected against overload, over temperature and reverse polarity.
