

KM6-II Subracks

Fully compatible with DIN41494 part 5 and IEC60297-3.

KM6-II 'Standard' is available in kit form, offering quick and simple assembly.

KM6-II Universal is a highly versatile subrack system, supplied in a wide range of kits and individual parts. It can be EMC screened by the addition of various components and offers rugged construction.

A wide range of accessories add to the versatility of these systems.

In addition to the subracks there is a comprehensive range of compatible panels, both flat, and EMC and plug-in units.

KM6-II Toolkit

KM6-II TOOLKIT IS A CAD PACKAGE FOR USERS OF KM6-II SUBRACKS.

TOOLKIT enables designers and production engineers to call up the various components required in a subrack and then 'assemble' them on the CAD screen. The facility is ideal for producing documentation for mechanical lay-out, shop floor assembly and quality control departments.

The package will produce top, front and third angle views.

In addition to other CAD programs, TOOLKIT offers compatibility with AUTOCAD R10 and subsequent revisions.

Using TOOLKIT for modifying such components as extrusions, end plates and covers, a total custom package can be created.

TOOLKIT is available in various forms:

Ordering information

Disk size	Format	Order code
DOS 3.5"	Disks in dxf format	950-239856
DOS 3.5"	Disks in IGES format	950-240119

Other media types may be available as a special order.

An administration charge is made for the TOOLKIT service.

View from a TOOLKIT screen; bottom left of a KM6-II assembly including end plate, mounting flange, front extrusion, and pcb guide.

KM6-II Standard Subracks

Features

- Versions for backplane and DIN 41612 connector
- Strong and versatile
- Conforms to IEC 60297-3
- Conductive components
- 160mm mounting in 220mm versions
- 3U and 6U heights
- 160 and 220mm board compatible
- 42HP and 84HP widths available
- No adjustment after assembly
- Pre-tapped holes and machine screws throughout
- Supplied as a complete kit
- Reduced end plates to accept chassis supports
- Available with or without front handles

"Standard" subracks can be supplied with backplane or DIN 41612 connector mounting rear extrusion. 84HP kits are available with, or without, front handles.

Backplane extrusions can be converted to DIN 41612 using a separate connector frame.

While offering ease of assembly, KM6-II 'Standard' Subracks are strong and versatile. The extrusions are a larger section to improve rigidity and location of the guides. Versions suitable for 220mm boards will accept 160mm boards. The end plates have mounting facilities which allow the extrusions to be reversed relative to the front end plate angles, thus providing rear access.

The kit includes rear extrusions and is complete with all tapped strips. In order to maintain the front panel/connector geometry a suitable backplane spacer, either insulating or conductive, must be used on backplane versions.

Contents of kit

Item/Description	Material/Finish
2 end plates	2mm aluminum BS 1470 5251
-	H24 (NS4 H6), Conductive
2 end plate angles	2mm aluminum BS 1470 5251
-	H24 (NS4 H6), Conductive
2 front extrusions	Aluminum alloy BS 1474
	6063T6, Conductive
2 rear extrusions	Aluminum alloy BS 1474
	6063T6, Conductive
1 center rear extrusion (6U only)	Aluminum alloy BS 1474
	6063T6, Conductive
Tapped strips:	MS zinc passivate
Backplane variants 4 or 6 (3U/6U)	Aluminum alloy BS 1474 6063T6
DIN 41612 variants 2 (the rear extrusions are fully tapped)	
All hardware	
Assembly instructions	
Optional: handles	

Note: The conductive finish gives excellent electrical conductivity but is more easily marked than anodizing. During assembly care should therefore be taken to avoid the deposition of grease and oil, particularly on visible surfaces.

KM6-II Universal Subracks

Features

- Strong and versatile
- Two screw fixing for extrusion
- Conforms to IEC 60297-3
- Total flexibility permits wide range of configurations
- Available in kit or piece-part form
- Accurate location for first time assembly
- Rugged construction
- Pre-tapped holes and machine screws throughout
- EMC conversion
- With or without front handles

KM6-II Universal Subracks are strong, versatile and easy to assemble.

The extrusions are of large cross section for rigidity and are secured using two fixing screws into counterbored holes. The screws thus act as location dowels giving a high degree of accuracy. This version has the capability of housing Eurocards of different sizes in a variety of configurations. The frame can be constructed from standard parts in 3U, 4U, 6U, 7U and 9U heights.

The endplates, 240mm, 300mm, 360mm or 420mm deep, incorporate a series of punched holes so that the extrusions can be assembled at any required position. 300mm and greater depths also have a pattern of additional holes for fixing the chassis system 84HP variants are offered in Backplane or DIN 41612 connector mounting and are supplied with or without front handles. DIN 41612 rear extrusions are fully tapped.

Please note 4U and 7U versions can only be ordered from piece parts. Alternative versions of 3U, 6U and 9U subracks can also be ordered from piece parts.

KM6-II Subrack - piece parts

KM6-II UNIVERSAL - PIECE PARTS

It is possible to order KM6-II Universal subracks from piece parts. This allows special configurations to be achieved. 4U and 7U Universal subracks can only be ordered from piece parts. All basic components are detailed on the next three pages.

Typical Example:

WHAT MUST I ORDER?

To achieve a basic 3U Universal subrack you must order the following:

- 2 end plates
- 2 or 4 tapped strips
- 2 end plate angles
- 1 packet of hardware
- 1 front extrusion (top)
- Hardware screws (M4 x 25skt cap)
- 1 front extrusion (bottom)
- 2 rear extrusions

KM6-II Universal subrack

KM6-II UNIVERSAL SUBRACK

KM6-II Subrack - piece parts

END PLATES AND END ANGLES

Universal end plates are punched on a 12mm pitch along their length to enable extrusions to be mounted to meet customer applications.

Identifications are stamped on the end plate to assist in extrusion location. End plates and end plate angles are sold separately (i.e. 2 required for each subrack). Endplate angles are available with or without handle hardware holes.

The 4U x 360 and 7U x 420 versions can be assembled as 3U/6U + 2 X 0.5U or 3U/6U + 1U.

KM6-II Subrack - piece parts

KM6-II FRONT EXTRUSIONS

KM6-II front extrusions include a two screw fixing facility. Accuracy of alignment is ensured by the dowel fixing screws. A slot enables guides to be secured using M2,5 x 5 screws and a tapped strip.

Dust covers and EMC covers are also attached to these extrusions.

STANDARD front extrusions have slot identification printed along their length to aid guide location. Top versions also have a printed ident/label on the front face for panel location.

In addition to the standard front extrusion, there are three other types:

PLAIN, which has no guide location holes; this extrusion is included in EMC conversion kits and can also be used for attaching additional panels (e.g. for rear socket mounting).

LIPLESS, which has normal guide location holes but offers two facilities; if used as a height dividing extrusion, it is possible to use overall front panels; it will also fit within an EMC screen, permitting the recessing of cards.

INJECTOR/EJECTOR, which is a modified normal front extrusion with an added feature which provides the operating surface for the injection of PCB's. This feature reduces the vertical front aperture to 105,9mm (on a 3U).

These three latter extrusions are supplied in 84HP lengths and are not silk screen printed.

KM6-II Subrack - piece parts

REAR EXTRUSIONS

For backplane mounting, the KM6-II rear extrusions accept tapped strips. In order to maintain correct connector geometry it is necessary to fit a spacer, either conductive or insulating between extrusion and motherboard/backplane.

Top and bottom rear extrusions are supplied separately.

Backplane extrusions can be converted to DIN 41612 by means of a connector mounting frame.

Contents of kit

Item/Description	Material/Finish
1 Extrusion	Aluminum alloy BS 1474 6063T6, conductive* finish.

*Note: alocrom 1000 or equivalent

Ordering information

Rear extrusions	Backplane mounting	Order code

KM6-II Subrack Accessories

PCB GROUNDING CLIP

- Electrostatic Protection
- No screws required

This grounding clip can be inserted into the front or rear of 1,6mm pcb guides in KM6-II subracks. Contacts on the clip provide electrical continuity between a suitably equipped Eurocard and, via a spring under the clip, standard front extrusions. Pcb's can, thus be grounded before the engagement of connectors. The clip, which is supplied in packs of 10, fits into a 'pocket' in the guide and requires no screw hardware to maintain contact.

The modification required to the pcb takes the form of a conductive strip along the edge of the board, (see illustration) either on the left or right side.

The clip has been tested to IEC 950: 1986 section 2.5.11. In testing, the clip reached a steady temperature of 76 degrees C at 15A, with a resistance path of 7 mOhms. A typical electrostatic discharge would be 12A for a period of 1 microsecond.

The clip is designed to provide a ground path for electrostatic charges, not for a power short circuit or as a ground rail.

Contents of kit

Item/Description	Material/Finish
Grounding clip, pk 10	0,15mm spring steel plated

Ordering information

Grounding clip pk 10	950-251366

POSITIVE GUIDE RETENTION

All KM6-II guides, with the exception of the 2,4mm slot version, can be bolted down to a tapped strip in the front extrusion to give shock and vibration resistance.

Tapped strips (detailed below and supplied individually) should be selected by subrack type and width.

The screw used is M2,5 x 5mm cheesehead, supplied in a packet of 100.

Universal 84 HP Subrack	950-202001
Security fixing screws M2,5 x 5	173-202579

Note: for other widths and for divider kits, a longer strip should be cut down to size

PCB GROUNDING CLIP

Detail of grounding strip requirements on a standard Eurocard - wiring and/or component side

PCB GUIDES

PLUG-IN UNIT GUIDES

3 PART GUIDES

Guide length "L" Guides should be cut to pcb length minus 76mm

POSITIVE GUIDE RETENTION

Screw retention of guides in a KM6-II subrack

KM6-II Divider Kits

KM6-II 6U FRONT DIVIDER KITS

KM6-II, front divider kits can be fitted after assembly of the subracks.

For use with 6U subracks, these divider kits provide a useful way to mix 3U and 6U board heights within a unit.

The divider section is available in different widths from 21 HP measured from either the left hand or right hand side.

The design of the kit is such that there is no loss of front panel space. It should be noted, however, that the divider plate restricts the use of 'C' type connectors to plug-in units of 4 HP width, or greater, at the position immediately to the left of the plate.

Contents of kit

Item/Description	Material/Finish
2 front extrusions and strips	Aluminum alloy BS 1474HE9TF tapped conductive finish
1 6U divider plate (not 84HP version)	1,6mm aluminum alloy BS1470NS4 1/2H conductive finish
Location moldings (not 84HP version)	Luranyl 2452/1
Fixing screws	

KM6-II LEFT HAND AND RIGHT HAND DIVIDER KIT

6U Right hand divider kit, width 42 HP	950-202611
6U Right hand divider kit, width 60 HP	950-202612
Full width divider kit, width 84 HP	950-201275

KM6-II 9U FRONT DIVIDER PLATE

This plate will divide a 9U subrack into 3U and 6U sections.

It should be ordered in conjunction with 6U front divider kits. (The 6U plate is discarded.)

DIMENSIONAL DETAIL - FRONT DIVIDERS

NON STANDARD DIVIDER EXTRUSIONS

In order to produce other widths of divider kits, a larger, standard width should be modified as shown:

FRONT

KM6-II Divider Kits

REAR DIVIDER KITS

Rear divider kits reduce the depth of a subrack locally by 60mm, thus permitting a subrack to be divided into different pcb depths (160 and 220mm for instance).

The kit contains rear extrusions, rear divider plate and assembly screws. Tapped strips are not included, but should be cut down to suit from larger ones. The extrusions are tapped in handed pairs and the counterbored end fits to the end plate.

3U and 6U rear divider plates are available

The 6U version should be attached to the center rear extrusion using a small section of tapped strip in the forward slot of that extrusion.

Contents of kit

Item/description

rear extrusions

rear divider plate

assembly screws

KM6-II Subrack Accessories

HORIZONTAL MOUNTING MODULES

This unit, fitting into a subrack similar to a 3U module, is in fact a 6U 20HP subrack on its side. This permits the use of standard guides, front panels, plug-in units and solves the problem of housing 6U Eurocards in a 3U subrack.

The horizontal mounting module offers a number of additional advantages. It can be sub-assembled separately from the main subrack, and it offers plenum cooling between the end plates.

Contents of kit

Item/Description	Material/Finish
2 end plates	2,0mm AL chromate
2 front tie bars	BS 1474 HE 9 TE extrusion chromate
3 rear tie bars	BS 1474 HE 9 TE extrusion chromate
4 insulating strips	PVC grey UL 94.V0
6 tapped strips	Mild steel zinc and passivate
2 trim panels	1,0mm AL etch and clear anodize
1 filler panel	2,5mm AL etch and clear anodize
1 insulating sheet	Mylar 240
All hardware	

By fitting one or two plug-in unit guides to the main subrack the unit can be fully supported.

Order separately

Guides, connector mounting frame, cooling module, accessories.

KM6-II Hardware

KM6-II Hinged Front Panels

KM6-II HORIZONTALLY HINGED PANEL

Typically used in situations where quick access is needed to equipment, but it is not desirable to remove the panel completely - e.g. as a socket mounting or display panel.

A range of aluminum panels is supplemented by a 3U, 84HP smoked transparent version for use where it is necessary to view instruments or indicators.

Standard kits are supplied with plastic hinges. A die-cast metal hinge kit is available separately as an accessory to replace the plastic type.

Version 1 (as above)

Version 3 is a decorative panel, being entirely anodized after manufacture. It is supplied in kit form with plastic inserts as standard. These inserts can be replaced with a metal type.

Contents of kits

Item/Description	Material/Finish
Hinged panel	Lexan Polycarbonate, UL 94.V0
Two hinges and hardware	Polypropylene, black
Metal hinge kit:	
Two hinge sets and hardware	Mazak, black
