3. GENERAL DATA

The following specifications are applied to the following TFT.
Note : Inverter for Back-Light unit is not built in this module.

Product Name	TX31D55VM2BAA	
Effective Display Area	(H)261.6 x (V)156.96	[mm]
Display Dots	(H)(800x3) x (V)480	
Display Pixels	(H)800 x (V)480	[pixels]
Pixel Pitch	(H)0.327 x (V)0.327	[mm]
Color Pixel Arrangement	R+G+B Vertical Stripe	
Display Mode	Transmissive Mode, Normally White Mode	
Surface Polarizing Film	Anti-Glare Polarizing Film	
Number of Colors	262k	[colors]
Interface	C-MOS (R + G + B 6 bit Digital)	
Color Saturation	60%(typ.) For NTSC	
Viewing Direction	12 O'clock	
Backlight	1pc . of CCFL (U shaped)	
Dimensions Outline	(H)283.0 typ. x (V)173.8 typ. x (t)(12.4 max.)	[mm]
Weight	Approximately 550	[g]

4. ABSOLUTE MAXIMUM RATINGS

4.1 ENVIRONMENTAL ABSOLUTE MAXIMUM RATINGS

Item	Operating		Non-operation		Unit	Note
	Min.	Max.	Min.	Max.		
Temperature	-20	70	-30	70	°C	1),5),6)
Humidity	2)		2)		%RH	1)
Vibration	-	4.9(0.5G)	-	19.6(2G)	m/s ²	3)
Shock	-	29.4(3G)	-	490(50G)	m/s ²	4)
Corrosive Gas	Not Acceptable		Not Acceptable			
Illumination at LCD Surface	-	50,000	-	50,000	lx	
CFL Life time	30,000h (Average) (Note 7)		-		At 25°C I _L =6mA max.	

Notes 1) "Temperature" and "Humidity" shall be measured on panel surface.

The ratings apply to every part of this module and shall not be exceeded.

The operating temperature only guarantee the display can be operated ; regarding the contrast response time, illumination and other features related to the quality are judged by Ta=25°C condition.

Generally the illumination will down and LCD response time will becomes slower when the display operated under a lower temperature environment.

2) Ambient temp. $T_a \leq 40^\circ\text{C}$: 85%RH max. Without condensation.

$T_a > 40^\circ\text{C}$: Absolute humidity must be lower than the humidity of 85% at 40°C Without condensation.

3) Frequency of the vibration shall be between 20 Hz and 50 Hz.
(except resonance point)

4) Pulse width of the shock shall be 3 ms.

5) In Non-operation condition ($T_a > 70^\circ\text{C}$) the TFT-LCD module should be put within 96 hrs.
In Non-operation condition ($T_a < -30^\circ\text{C}$) the TFT-LCD module should be put within 240 hrs and without condensation.

6) In operation condition ($T_a > 70^\circ\text{C}$) the TFT-LCD module should be put within 96 hrs.
In operation condition ($T_a < -20^\circ\text{C}$) the TFT-LCD module should be put within 240 hrs and without condensation.

7) When brightness reached 50% of initial brightness.

4.2 ELECTRICAL ABSOLUTE MAXIMUM RATINGS

4.2.1 TFT-LCD MODULE

VSS=0V

Item	Symbol	Min.	Max.	Unit	Note
Power Supply Voltage for logic	VDD	0	4.0	V	
Input signal Voltage for logic	VI	-0.3	VDD+0.3	V	1)
Electrostatic Durability	VESD0	±100		V	2),3)
	VESD1	±8		kV	4),5)

Notes 1) The specification is applied to pixel data signal, timing signal and clock signal.

2) Discharge circuit to be connected : 200pF - 0Ω, Environmental : 25°C - 70%RH

3) The specification is applied to I/F connector pins.

4) Discharge circuit to be connected : 200pF - 250Ω, Environmental : 25°C - 70%RH

5) The specification is applied to the surface of both a metal bezel and a LCD panel.

4.2.2 BACK-LIGHT UNIT

GND=0V

Item	Symbol	Min.	Max.	Unit	Note
Lamp Current	IL	-	7.0	mArms	1)
Lamp Voltage	VL	-	2000	Vrms	2)

Notes 1) To be measured at GND terminal side

2) The specification is applied at connector pins for back-light units.

5. ELECTRICAL CHARACTERISTICS

5.1 TFT-LCD MODULE

Ta=25°C, VSS=0V

Item	Symbol	Min.	Typ.	Max.	Unit	Note
Power Supply Voltage	VDD	3.0	3.3	3.6	V	
Input Voltage for Logic Circuits	Hi	V _{IH}	2.0	-	VDD	mV
	Lo	V _{IL}	VSS	-	0.8	
Power Supply Current	I _{DD}	-	300	400	mA	1),2)
Vsync Frequency	f _V	-	60	75	Hz	
Hsync Frequency	f _H	-	31.6	39.2	kHz	
DCLK Frequency	f _{CLK}	-	33.3	40	MHz	

Notes 1) The specification is applied to pixel data signal, timing signal and clock signal.
 2) f_V=60Hz, f_{CLK}=33.3MHz, VDD=3.3V, DC Current.

Typical value is measured when displaying Black raster.

Maximum is measured when displaying Vertical-stripe pattern of 2 pixel pitch.

3) Current capacity for VDD power source should be larger than 2A.

This TFT-LCD Module has a fuse (1.0A).

5.2 BACK-LIGHT UNIT

Ta=25°C

Item	Symbol	Min.	Typ.	Max.	Unit	Note
Lamp Current	I _L	4.0	6.0	7.0	mArms	1),2)
Lamp Voltage	V _L	-	1000	-	V _{rms}	
Frequency	f _L	40	-	70	kHz	3)
Starting Lamp Voltage	V _S	1400	-	-	V _{rms}	Ta=25°C
		1600	-	-		Ta= 0°C

Notes 1) Larger I_L causes the shorter life of a CCFL.

2) To be measured at GND terminal side

3) Frequency of power supply for a CCFL may cause interference with HSYNC frequency and causes beat or flicker on the display.

Therefore, lamp frequency shall be as different as possible from HSYNC frequency in order to avoid the interference.

4) Starting Lamp Voltage should be kept 1 sec at least.

5) The inverter should be built-in a safety circuit which detects over current, over voltage and distorted wave form of lamp current.

6) Distribution difference of lamp surface temperature should be less than 5°C

7) When the lighting wave form of the inverter is asymmetric, the inclination of mercury is generated. Therefore, please adjust the unbalance ($|I_p^+ - I_p^-| / I_{rms} \times 100\%$) of the lighting current wave form to 10% or less, and Adjust the wave high rate (I_p^+ (or I_p^-)/ I_{rms}) to 1.2~1.63.

6. OPTICAL CHARACTERISTICS

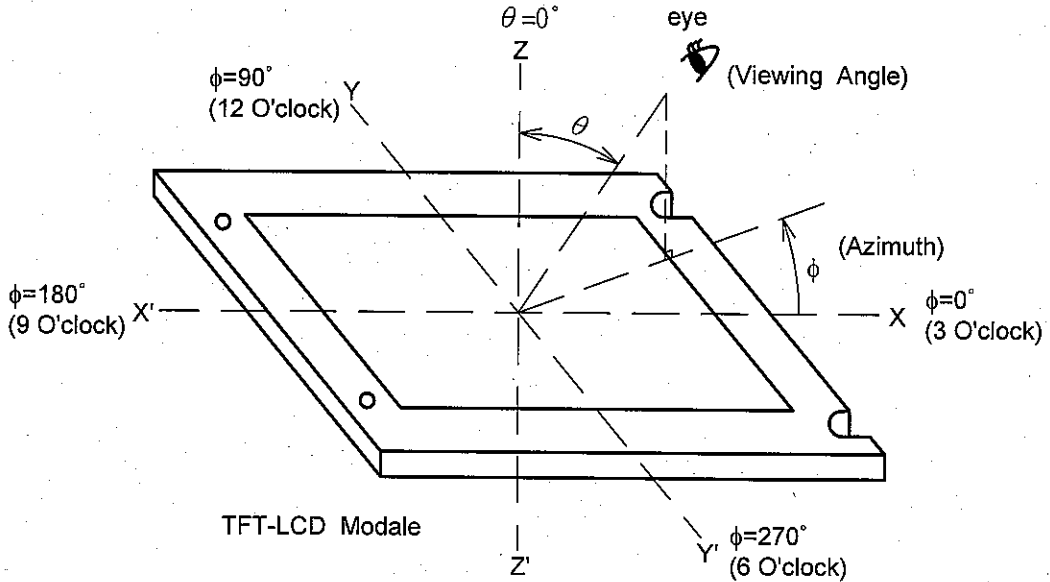

The following optical characteristics are measured under stable conditions. It takes about 30 minutes to reach stable conditions. The measuring point is the center of display area unless otherwise noted.

The optical characteristics should be measured in a dark room or equivalent state.

- Measuring equipment : Topcon BM-7 Prichard 1980A, or equivalent
- Temperature = 25°C , VDD=3.3V , fV=60Hz , IL=6.0mA

4) Definition of Brightness Uniformity

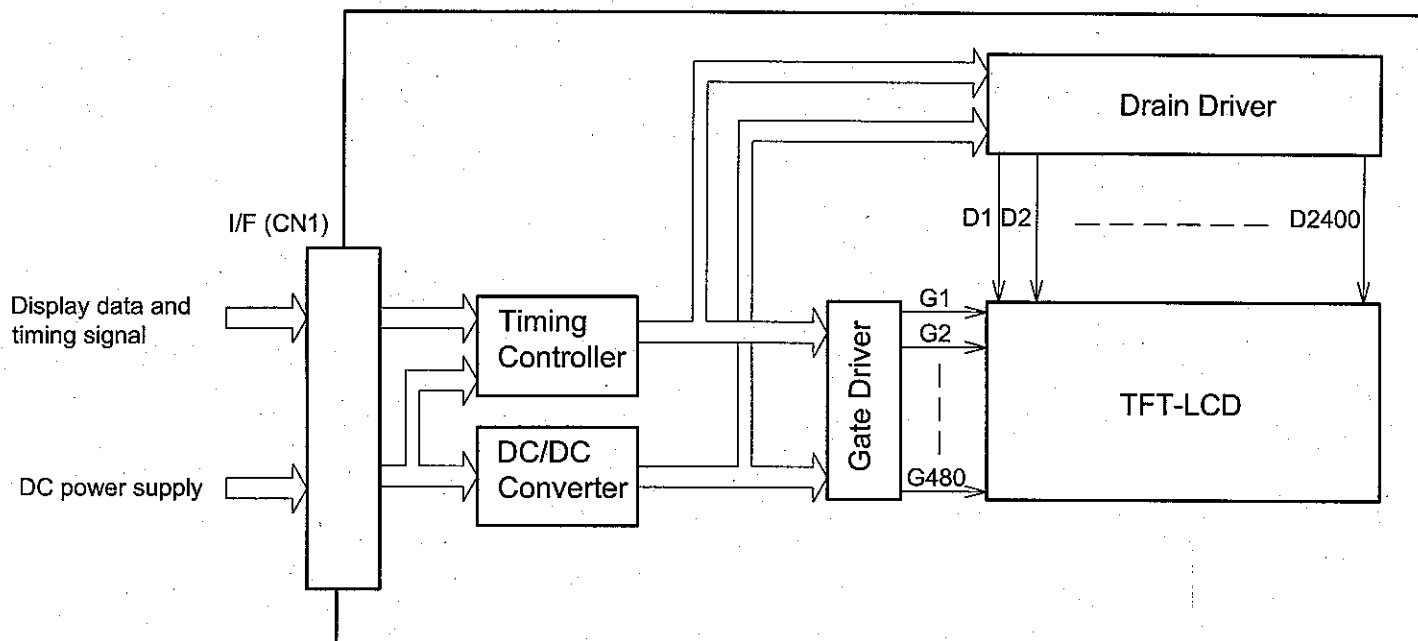

The brightness uniformity (Buni) is defined as the following equation.

$$Buni = \frac{B_{min}}{B_{max}} \times 100$$

where, B_{max} = Maximum brightness among 5 measuring points
 B_{min} = Minimum brightness among 5 measuring points

11.2 REVISION(REV.) CONTROL

REV. column is controlled by the manufacturing. A-Z except I and O is to be written on this column

11.3 LOCATION OF LOT MARK

Lot mark is printed on a label. The label is on rear side of module as shown in the drawing at Section 10.

The style of character may be changed without notice.

12. COSMETIC SPECIFICATIONS

12.1 CONDITION FOR COSMETIC INSPECTION

(1) Viewing zone

a) The figure shows the correspondence between eyes (of inspector) and TFT-LCD module.

$\theta \leq 45^\circ$: when non-operating inspection

$\theta \leq 5^\circ$: when operating inspection

b) Inspection should be executed only from front side and only A-zone.

Cosmetic of B-zone and C-zone are ignored.

(refer to 12.2 Definition of zone)

(2) Environmental

a) Temperature : 25°C

The appearance inspection at Back-light on is done at 25°C on a TFT-LCD panel.

b) Ambient light : More than 2000 [lx] and non-directive.

c) Back-light : when non-operating inspection , Back-light should be off.

(3) Operating inspection

Operating inspection should be done with 8 color mode (without gray scale).

12.2 DEFINITION OF ZONE

A-zone : Display area (pixel area)

B-zone : Area between A-zone and C-zone

C-zone : Metallic bezel area (include I/F connector)

12.3 COSMETIC SPECIFICATIONS

When displaying conditions are not stable (ex. at turn on or off), the following specifications are not applied.

2) Sparkle mode : brightness of dot is more than 30% at black raster. (visible to eye)

3) Black mode : brightness of dot is less than 70% at white raster. (visible to eye)

4) 1 dot : defect dot is isolated, not attached to other defect dot.

5) N dots : N defect dots are consecutive. (N means the number of defects dots)

6) Density : number of defect dots inside 20mm ϕ .

7) Those stains which can be wiped out easily are not defects.

8) Polarizer area inside of B-zone is not applied.

13. PRECAUTION

Please pay attention to the followings when you use this TFT-LCD Module with Back-light unit.

Life support applications : HITACHI's products are not authorized for use in life support systems.

13.1 PRECAUTION TO HANDLING AND MOUNTING

- (1) You should consider the mouting structure so that uneven force (ex. twisted stress) is not applied to the module.
- (2) To improve the strength of module against the mechanical shock the space between the module and the case should be less than 1.0mm.
- (3) Protection material in front of LCD's screen surface is recommended to protect a polarizer , LCD-glass and metal bezel. Please be note that the protection material should not touch them directry.
- (4) Acetic acid type and chloline type materials for the cover case are not desiable because the former generate corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (5) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub by dustclothes with chemical treatment. Do not touch the surface of polarizer with bare hand or greasy close. (Some cosmetics are detrimental to the polarizer.)
- (6) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials chamois soaked Normal-Hexane. Normal-Hexane is recommended for clearing the adhesives used to attach front/rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (7) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer cuses deformations and color fading.
- (8) The module should never be opened or modified.
It may cause not to operate properly.
- (9) Metallic bezel of a module should not be handled with bare hand or dirty gloves. Otherwise, color of a metallic frame may become dirty during its storage. It is recommended to use clean soft gloves and clean finger stalls when a module is handled at incoming inspection process and production (assembly) process.
- (10) When you adopt a metallic shield board on backside of TFT-LCD Module, it should not be too close to TFT-LCD Module.
- (11) Do not pull or do not fold the CCFL cable.

13.2 PRECAUTION TO OPERATION

- (1) You should adopt radiation structure to satisfy the temperature specification.
- (2) Optical response time, luminance and chromaticity depend on the temperature of a TFT-LCD module. (At lower temperature it becomes longer.)
- (3) Response time and saturation time of CCFL luminance become longer at lower temperature operation.
- (4) Sudden temperature change may cause dew on and/or in the a module.
Dew males damage to a polarizer and/or electrical contacting portion.
Dew causes fading of displayed quality.
- (5) Fixed patterns displayed on a module for a long time may cause after-image.
It will be recovered soon.
- (6) Please connect the Back-light connector to the inverter circuit directly.
The long cable between CCFL and the inverter may cause the brightness drop of CCFL and may cause the rise of starting lamp voltage(Vs).
- (7) The module should not be connected or removed while a main system works.
- (8) Inserting or pulling I/F connectors causes any truble when power supply and signal datas are on-state. I/F connectors should be inserted and pulled after power supply and signal datas are turned off.

13.3 ELECTROSTATIC DISCHARGE CONTROL

- (1) Since a module consists of a TFT cell and electronic circuits with CMOS-ICs, which are very weak to electrostatic discharge, persons who are handling a module should be grounded through adequate methods such as a list band.
I/F connector pins should not be touched directly with bare hands.
- (2) Protection film for a polarizer on a module should be slowly peeled off so that the electrostatic charge can be minimized.

13.4 PRECAUTION TO STRONG LIGHT EXPOSURE

A module should not be exposed under strong light. Otherwise, characteristics of a polarizer and color filter in a module may be degraded.

13.5 PRECAUTION TO STORAGE

When TFT-LCD Modules are stored for long time, following precautions should be taken care of:

- (1) Modules should be stored in a dark place. It is prohibited to apply sunlight or fluorescent light during storage. Modules should be stored at 0 to 35°C at normal humidity (60%RH or less).
- (2) The surface of polarizers should not come in contact with any other object. It is recommended that modules should be stored in the HITACHI's shipping box.

13.6 PRECAUTION TO HANDLE PROTECTIVE FILM

- (1) When the protective film is peeled off, static electricity is generated between the film and the polarizer. This film should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) The protective film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protective film against the polarizer during the time you peel off the film, the glue is apt to remain more on the polarizer. So please carefully peel off the protective film without rubbing it against the polarizer.
- (3) When the module with protective film attached is stored for long time, sometimes there remains a very small amount of glue, still on the polarizer after the protective film is peeled off. Please refrain from storing the module at the high temperature and high humidity for glue is apt to remain in these condition.
- (4) The glue may be taken for the modules failure, but you can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with Norm-Hexane.

13.7 SAFETY

- (1) If module is broken, be careful to handle not to injure.
(TFT-LCD and Lamp are made of glass.)
Please wash hands sufficiently when you touch the liquid crystal coming out from broken LCDs.
- (2) As Back-light unit has high voltage circuit internal, do not open the case and do not insert foreign materials in the case.
- (3) The CCFL inverter should be designed to include the function of output shutdown in case the output overcurrent happen due to any backlight trouble.
The shutdown function should be assured to work in abnormal condition at the actual systems.

13.8 ENVIROMENTAL PROTECTION

- (1) This TFT-LCD Module include Cold Cathode Fluorescent Lamp (CCFL). CCFL contains a small amount of mercury. Please follow local ordinance or regulations for disposal.
- (2) Flexible circuits board, printed circuits board and solder used in a module contain small amount of lead (Pb). Please follow local ordinance or regulations for its disposal.

13.9 USE RESTRICTIONS AND LIMITATIONS

- (1) This product is not authorized for use in life support devices or systems, military applications or other applications which pose a significant risk of personal injury.
- (2) In no event shall HITACHI, Ltd. , be liable for any incidental, indirect or consequential damages in connection with the installation or use of this product, even if informed of the possibility thereof in advance. These limitations apply to all causes of action in the aggregate, including without limitation breach of contract, breach of warranty, negligence, strict liability, misrepresentation and other torts.

13.10 OTHERS

- (1) Electrical components which may not affect electrical performance are subjective to change without notice because of their availability.
