MICRO MDSM

Shielded Connectors

MICRO MDSM is the Cannon designation for a shielded interface connector in its Microminiature series. It is ideally suited for applications with specific requirements to the shielding, e.g. components for telecommunications and computers.

The MDSM connector is suitable for modern solder methods, e.g. IR reflow and vapor phase soldering. It is available with crimp contacts (sockets only) as a cable connecting receptacle. Or with 90° solder pins as a pcb connector. The contacts are spaced at 1.27 mm, the solder pins at 1.27 x 2.54 mm. Different locking devices are available – see page 9.

Technical Data

Insulator	Thermoplast, UL94V-0
Contact guiding plate	PA, high temperature resistant
Shell	Steel, tinned and nickel plated
Contacts	Copper alloy
Contact finish	Gold over PdNi
Contact termination area	Tin (SnPb)
Wire size	AWG 28 – 26
Insulation dia.	0.95 mm max
Contact spacing	1.27 mm
Contact number	9, 15, 25
Temperature range acc. DIN IEC 68 Part 1	-55 / 125°C

Electrical Data

Current rating	2.5 A / 25°C
Test voltage	350 Vrms
Contact resistance	20 mΩ max (crimp version) 35 mΩ max (pcb version)
Insulation resistance	5000 MΩ min

Shielding Effectiveness

Frequency MHz	Attenuation dB
10	56
30	47
159	34
500	26
750	22
1000	19

Z41 - Locking screw

Dobledecker

Order Reference

MDSM - 18 P E - Z7 - VR

Series _____

Number of contacts _____
18, 30

Contact type _____
P - Pin

Termination method _____
E - Solder pin 90°, spacing 1,27 x 2,54 mm with rivet nut and grounding tab

Mounting method* _____
Z7 - Locking screw
Z10 - Screw for wall thickness 1,5 mm
Z12 - Screw for wall thickness 1,0 mm
* Additional mounting methods on page 9

Packaging _____
VR - Tube packaging (not for termination method C)

Tube packaging (VR)
A tube contains the following numbers of MDSM connectors:

No. of contacts	No. of connectors
18	25
30	22

Ordering MDSM connectors
Tube loaded connectors can only be supplied in the quantity per tube shown in the table or in multiples thereof. Other quantities cannot be supplied.

No of contacts	Designation	Dimensions								
		A max	B	C max	D max	E	F	G (Wall thickness)		
								-Z7	-Z10	-Z12
18	MDSM-18PE-Z*-VR25	19,9	14,35	8,6	9,0	5,08	10,24	0,00	1,5	1,0
30	MDSM-30PE-Z*-VR22	23,7	18,16	12,4	12,8	8,89	14,00	0,00	1,5	1,0

MICRO MDS/MDSM

Screw locking

for cable connectors (socket side)

Z11 Screw, long, blank

for pcb connectors (pin side)

Z7 Locking screw

Z10 Screw for wall thickness 1.5 mm

Z12 Screw for wall thickness 1 mm

Z33 Locking screw, short

Z34 Screw, short, for wall thickness 1.5 mm

Z35 Screw, short, for wall thickness 1 mm

Push Pull

for cable connectors (socket side)

Z24 Push pull

for pcb connectors (pin side)

Z41 Locking pin

Z42 Screw, for wall thickness 1.5 mm

Z43 Screw, for wall thickness 1 mm

MICRO MDSM

with straight solder pins

Due to customer requirements connectors MDSM-9PE-Z** with 90° termination are not suitable for all applications. There is great interest for a MDSM version with straight terminations. To fulfill market requirements the following connector versions and tools were developed:

MDSM-9PA-Z7/Z10 and MDSM-9PA-Z41/Z42 with straight terminations and pcb locking.

Typical Applications

SSA band and disk drives, SSA distribution panels, bar code readers, mobile telecommunications and medical equipment.

Locking of PC Board

The mating and unmating forces are concentrated on to an integrated PCB locking, after the connector has been mounted on a pc board.

Please note:

The standard screw locking which is being used for MDSM-9PE-Z10 do **not** apply to MDSMA-9PA.

The MDSM-9PA screws require a shorter thread.

MDSM-9PA Connector optionally with push-pull or screw locking

Technical Data

Insulator	Thermoplast, UL 94V-0
Shell	Steel, tinned and nickel plated
Contacts	Copper alloy
Contact finish	Gold over PdNi
Contact termination	tinned
Wire size	AWG 28 – 26
Contact spacing	1,27 mm
Contact number	9
Temperature range acc to DIN IEC 68 part 1	-55 / 125°C

Electrical Data

Current rating	1,5 A / 55°C
Voltage rating	350 Vrms
Contact resistance	20 mΩ max
Insulation resistance	5000 MΩ

THIS NOTE SHOULD BE READ IN CONJUNCTION WITH THE PRODUCT DATA SHEET/CATALOGUE. FAILURE TO OBSERVE THE ADVICE IN THIS INFORMATION SHEET AND THE OPERATING CONDITIONS SPECIFIED IN THE PRODUCT DATA SHEET/CATALOGUE COULD RESULT IN HAZARDOUS SITUATIONS.

1. MATERIAL CONTENT AND PHYSICAL FORM

Electrical connectors do not usually contain hazardous materials. They contain conducting and non-conducting materials and can be divided into two groups.

a) Printed circuit types and low cost audio types which employ all plastic insulators and casings.

b) Rugged, Fire Barrier and High Reliability types with metal casings and either natural rubber, synthetic rubber, plastic or glass insulating materials.

Contact materials vary with type of connector and also application and are usually manufactured from either copper, copper alloys, nickel, alumel, chromel or steel. In special applications, other alloys may be specified.

2. FIRE CHARACTERISTICS AND ELECTRIC SHOCK HAZARD

There is no fire hazard when the connector is correctly wired and used within the specified parameters. Incorrect wiring or assembly of the connector or careless use of metal tools or conductive fluids, or transit damage to any of the component parts may cause electric shock or burns. Live circuits must not be broken by separating mated connectors as this may cause arcing, ionisation and burning.

Heat dissipation is greater at maximum resistance in a circuit. Hot spots may occur when resistance is raised locally by damage, e.g. cracked or deformed contacts, broken strands of wire. Local overheating may also result from the use of the incorrect application tools or from poor quality soldering or slack screw terminals. Overheating may occur if the ratings in the Product Data Sheet/Catalogue are exceeded and can cause breakdown of insulation and hence electric shock.

If heating is allowed to continue it intensifies by further increasing the local resistance through loss of temper of spring contacts, formation of oxide film on contacts and wires, and leakage currents through carbonisation of insulation and tracking paths. Fire can then result in the presence of combustible materials and this may release noxious fumes. Overheating may not be visually apparent. Burns may result from touching overheated components.

3. HANDLING

Care must be taken to avoid damage to any component parts of electrical connectors during installation and use. Although there are normally no sharp edges, care must be taken when handling certain components to avoid injury to fingers.

Electrical connectors may be damaged in transit to the customers, and damage may result in creation of hazards. Products should therefore be examined prior to installation/use and rejected if found to be damaged.

4. DISPOSAL

Incineration of certain materials may release noxious or even toxic fumes.

5. APPLICATION

Connectors with exposed contacts should not be selected for use on the current supply side of an electrical circuit, because an electric shock could result from touching exposed contacts on an unmated connector. Voltages in excess of 30 V ac or 42.5 V dc are potentially hazardous and care should be taken to ensure that such voltages can not be transmitted in any way to exposed metal parts of the connector body. The connector and wiring should be checked, before making live, to have no damage to metal parts or insulators, no solder blobs, loose strands, conducting lubricants, swarf, or any other undesired conducting particles. Insulation resistance should be checked to make certain that no low resistance joints or spurious conducting paths are existing between contacts and exposed metal parts of the connector body. Further the contact resistance of the connectors should be measured within the electrical circuit in order to identify high resistances which result in excessive connector heating.

Always use the correct application tools as specified in the Data Sheet/Catalogue.

Do not permit untrained personnel to wire, assemble or trumper with connectors.

For operation voltage please see appropriate national regulations.

IMPORTANT GENERAL INFORMATION.

1. Air and creepage paths/Operating voltage

The admissible operating voltages depend on the individual applications and the valid national and other applicable safety regulations.

For this reason the air and creepage path data are only reference values. Observe reduction of air and creepage paths due to PC board and/or harnessing.

2. Temperature

All information given are temperature limits. The operation temperature depends on the individual application.

3. Other important information

Cannon continuously endeavours to improve their products. Therefore, Cannon products may deviate from the description, technical data and shape as shown in this catalogue and data sheets.

4. Harnessing and Assembly Instructions

If applicable, our special harnessing and/or assembly instruction has to be adhered to. This is provided at request.

ITT Cannon manufactures the highest quality products available in the marketplace; however these products are intended to be used in accordance with the specifications in this catalog. Any use or application that deviates from stated operating specifications is not recommended and may be unsafe. No information and data contained in this catalog shall be construed to create any liability on the part of Cannon. Any new issue of this catalog shall automatically invalidate and supersede any and all previous issues. **A limited warranty applies to Cannon products. Except for obligations assumed by Cannon under this warranty, Cannon shall not be liable for any loss, damage, cost of repairs, incidental or consequential damages of any kind, whether or not based on express or implied warranty, contract, negligence or strict liability arising in connection with the design, manufacture, sale, use or repair of the products.** Product availability, prices and delivery dates are exclusively subject to our respective order confirmation form; the same applies to orders based on development samples delivered. This catalog is not be construed as an offer. It is intended merely as an invitation to make an offer. By this publication, Cannon does not assume responsibility or any liability for any patent infringements or other rights of third parties which may result from its use. Reprinting this catalog is generally permitted, indicating the source. However, Cannon's prior consent must be obtained in all cases.
