

Low-Frequency Quartz Crystals from Micro Crystal are your simple solution to sourcing crystals compatible with TI's MSP430 Ultra-Low-Power Microcontrollers!

Take full advantage of the capabilities of TI's MSP430. Add a 32.768kHz crystal to your MSP430 controller and you'll generate an accurate reference frequency for the microcontroller's sleep mode, as well as your other circuitry that may require a timing reference.

We can help you match the right crystal and you'll have a reliable and accurate timing source.

Micro Crystal has worked with TI to help you choose an ideal crystal for your circuit application. Tell us about your application and we will provide recommendations for a crystal that is known to function well in your application.

The Micro Crystal line includes timing crystals in a variety of sizes and package designs to meet a wide range of size and cost constraints. We can offer application engineering assistance to help you optimize the efficiency of your sleep-mode circuitry, as well as selection advice. Fast delivery is available on 32.768kHz crystals in virtually any quantity required.

MS1V-T1K Tuning Fork Crystal 30 kHz – 200 kHz

sales@microcrystal.ch

Micro Crystal is one of the world's leading producers of subminiature timing crystals. Founded 1978 by the Swiss watch industrie, Micro Crystal today is still a company of Swatch Group.

Pierce Oscillator

Design and Crystal Recommendation

TI's MSP430
1xx, 3xx family

Results Oscillator Design check	Units
Power Supply V_{DD}	>3.0 [Volt]
Load capacitors	integrated [pF]
Oscillation allowance	300 [kOhm]
Recommended Crystal ESR typ.	60 [kOhm]
Effective load-capacitance	10.2 [pF]
Drive level	0.220 [microW]
Start-up time	1000 [ms]
Overtone suppression	Safe

Results Oscillator Design check	Units
Power Supply V_{DD}	<3.0 [Volt]
R_G	5.1 [Mohm]
Load capacitors	integrated [pF]
Recommended Crystal ESR typ.	60 [kOhm]
Effective load-capacitance	10.2 [pF]
Drive level	0.220 [microW]
Start-up time	1000 [ms]
Overtone suppression	Safe

Remarks:

- All load-capacitors are integrated.
- Connect the 32.768kHz crystal to the XIN and XOUT pins and respect the crystal's ESR-constraints.
- Design the circuit traces as short as possible to avoid additional load-capacitance and to minimize external interferences.
- When V_{dd} is <3 volts, the 5.1 Mohm option in red allows the use of SMD-crystals with an ESR up to 60kOhm typ.

Design - Crystal recommendation	Units
Metal-can package	MS1V-T1K
Ceramic package	CC4V-T1A
Frequency	Fs 32.768 [kHz]
Load-capacitance	CL 10.0 [pF]
Tolerance	Tol +/- 20 [ppm]

Results Oscillator Design check	Units
Power Supply V_{DD}	>1.8 [Volt]
Load capacitors	integrated [pF]
Oscillator setting	18 [pF]
Effective load-capacitance	7.0 [pF]
Oscillation allowance	500 [kOhm]
Drive level	0.070 [microW]
Start-up time	400 [ms]
Overtone suppression	Safe

Design - Crystal recommendation	Units
Metal-can package	MS1V-T1K
Ceramic package	CC5V-T1A
Frequency	32.768 [kHz]
Tolerance	+/- 20 [ppm]
Oscillator Setting	18 (14) [pF]
C_L (crystals)	7 (6) [pF]

Recommendation:
<ul style="list-style-type: none"> • Recommended setting for the internal MSP 430 oscillator is 18pF • (Alternative setting for the internal MSP 430 oscillator is 14pF) • Do not use 0pF and 10pF settings for use with quartz crystals
Remarks:
<ul style="list-style-type: none"> • All components are integrated, no external components others than the crystal are needed. • Connect the 32.768kHz crystal to the XIN and XOUT pins and respect the crystal's specification constraints. • Design the circuit traces as short as possible to minimize the effects of external interference and to avoid additional load-capacitance due to stray-capacitances. • All crystal constraints are based on reasonable pad-layout and trace-length.
