

3200

Ideal for:

- Plastic extrusion
- Hot runners

MODELS

- Thermoforming
- Ovens
- Chillers
- Trace heating
- Stress relieving

Features:

- 8 Segment programmer
- Heater failure detection
- Current monitoring
- Internal timer
- Scrolling text messages
- Recipes
- Modbus comms
- Modbus SP retransmission
- Analogue retransmission
- Remote setpoint
- Help text

Temperature/Process Controllers

Specification Sheet

The innovative range of 3200 controllers offer precision control of temperature and other process variables together with a host of advanced features not normally found in this class of controller.

The emphasis is on ease of use. A simple 'Quick Start' code is used to configure all the functions essential for controlling your process. This includes input sensor type, measurement range, control options, and alarms, making 'Out the Box' operation truly achievable. In operator mode every parameter has a scrolling text message describing its function and is available in English, German, French, Spanish or Italian. More advanced features are configured using a PC based configuration wizard which is an easy to use and instructive guide to all the functions in the controller.

Heater Current Monitoring

A current transformer input provides display of the heater current and a health check on the load. Partial load failure, heater open circuit and SSR faults are detected and displayed as scrolling alarm messages as well as providing an alarm output. On the 3208 and 3204 a front panel ammeter displays the heater current.

Setpoint Programmer

Heat treatment profiles can be programmed using the 8-segment programmer. Holdback, at the beginning of each segment can be used to guarantee the soak periods. A digital event output can be triggered in any segment to initiate actions within the process.

Custom Text Messaging

Custom messages can be created with a PC tool and downloaded to the 3200 to display when an event, alarm or process condition occurs. This provides the operator with good visibility of the status of the process.

Remote Setpoint

An option exists for the 3200 to have a Remote Analogue Input. This can be either volts or mA and is used to allow the setpoint to be generated by a master controller or PLC.

Recipes

Using a PC tool recipes can be created that can be used to change the operating parameters of the 3200 simply by selecting a new recipe using the 3200 HMI. This is very useful where multiple products are processed using the same controller but require different parameters to be set.

Timer

An internal timer is configurable as an interval timer, delay timer or to provide a soft start for hot runner control.

Setpoint Retransmission

Sending the setpoint or other parameters from the 3200 to slave devices can be achieved either using conventional analogue communications or using Master Modbus comms. Master Modbus in the 3200 allows a broadcast of 1 parameter to the network. A typical application is a setpoint being retransmitted to a number of slave controllers in a multi-zone furnace.

Modbus Communications

All units support both EIA232 and 2-wire EIA485 communicating using the Modbus protocol.

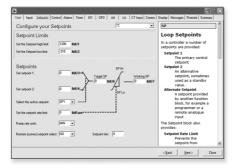

Configuration Adaptor

PC configuration to all 3200 controllers can be achieved by using a configuration adaptor. It provides iTools with the ability to communicate with and configure devices without any power being connected.

iTools Wizard

Used to simplify the set up of 3200 series controllers. The wizard guides the user through the configuration process with interactive help and graphical demonstrations of features.

TECHNICAL SPECIFICATION

General

Environmental performance

Temperature Limits Operation: 0 to 55°C

Storage: -10 to 70°C

Humidity limits Operation: 5 to 90% RH non condensing Storage: 5 to 90% RH non condensing

Panel Sealing IP65, Nema 4X
Shock BS EN61010
Vibration 2g peak, 10 to 150Hz
Altitude: <2000 metres

Atmospheres Not suitable for use in explosive or

corrosive atmosphere

Electromagnetic compatibility (EMC)

Emissions and immunity BS EN61326

Electrical safety

(BS EN61010) Installation cat. II; Pollution degree 2

INSTALLATION CATEGORY II

The rated impulse voltage for equipment on nominal 230V mains is 2500V.

POLLUTION DEGREE 2

Normally, only non-conductive pollution occurs. Occasionally, however, a temporary conductivity caused by condensation shall be expected

Physical _____

Panel mounting 3216: 1/16 DIN 3208: 1/8 DIN 3204: 1/4 DIN

32h8: 1/8 DIN, horizontal
