Vishay Foil Resistors

High Precision Foil Resistor with TCR of ± 2.0 ppm/°C, Tolerance of \pm 0.005% and Load Life Stability of \pm 0.005%

Any value at any tolerance available within resistance range

INTRODUCTION

Bulk Metal[®] Foil (BMF) Technology outperforms all other resistor technologies available today for applications that require high precision and high stability.

This technology has been pioneered and developed by VISHAY, products based on this technology are the most suitable for a wide range of applications. BMF technology allows us to produce customer orientated products designed to satisfy challenging and specific technical requirements.

Model S Series made from Vishay BMF offers low TCR, excellent load life stability, tight tolerance, fast response time, low current noise, low thermal EMF and low voltage coefficient, all in one resistor.

The S Series is virtually insensitive to destabilizing factors. The resistor element is a solid alloy that displays the desirable bulk properties of its parent material, thus it is inherently stable and noise free.

Vishay Bulk Metal[®] S Series are the modern generation of precision resistors, their design gives you a unique combination of characteristics found in no other single resistor- and they're all standard.

Our Application Engineering Department is available to advise and to make recommendation for non-standard technical requirements and special applications, please contact us.

* Pb containing terminations are not RoHS compliant, exemptions may apply

*The standoffs shall be so located as to give a lead clearance of 0.010" minimum between the resistor body and the printed circuit board when the standoffs are seated on the printed circuit board. This is to allow for proper cleaning of flux and other contaminants from the unit after all soldering processes.

IMPROVED PERFORMANCE TESTING (IPT)

The preceding information is based on product directly off the production line. Improved performance (meaning increased time stability with load and other stresses) is available through factory conducted "Improved Performance Testing". The test routine is usually tailored to the users stability objectives and product that has been screened can be brought down to a potential load life of less than 50ppm.

Various screen test routines are available and all anticipated stresses must be taken into account before settling on one specific test routine. Our Applications Engineering Department is prepared to discuss and recommend appropriate routines given the full spectrum of anticipated stresses and stability requirements.
