## Low Voltage, Dual DPDT and Quad SPDT Analog Switches

#### DESCRIPTION

The DG2018 and DG2019 are low voltage, single supply analog switches. The DG2018 is a dual double-pole/doublethrow (DPDT) with two control inputs that each controls a pair of single-pole/double-throw (SPDT). The DG2019 uses one control pin to operate four independent SPDT switches.

When operated on a + 3 V supply, the DG2018's control pins are compatible with 1.8 V digital logic. The DG2019 has an available feature of a V<sub>L</sub> pin that allows a 1.0 V threshold for the control pin when V<sub>L</sub> is powered with 1.5 V.

Built on Vishay Siliconix's low voltage submicron CMOS process, the DG2018 and DG2019 are ideal for high performance switching of analog signals; providing low on-resistance (6  $\Omega$  at + 2.7 V), fast speed (T<sub>on</sub>, T<sub>off</sub> at 42 ns and 16 ns), and a bandwidth that exceeds 180 MHz.

The DG2018 and DG2019 were designed to offer solutions that extend beyond audio/video functions, to providing the performance required for today's demanding mixed-signal switching in portable applications.

An epitaxial layer prevents latch-up. Brake-before-make is guaranteed for all SPDT's. All switches conduct equally well in both directions when on, and blocks up to the power supply level when off.

#### **FEATURES**

- Low voltage operation (1.8 V to 5.5 V)
- Low on resistance
  - R<sub>DS(on)</sub>: 6 Ω at 2.7 V
- Low voltage logic compatible
  DG2019: V<sub>INH</sub> = 1 V
- High bandwidth: 180 MHz
- QFN-16 package

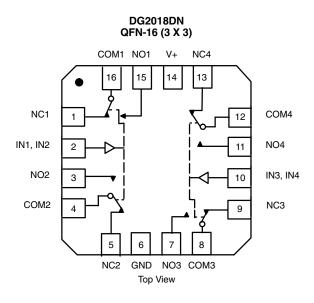

#### BENEFITS

- Ideal for both analog and digital signal switching
- Reduced power consumption
- High accuracy
- Reduced PCB space
- Fast switching
- Low leakage

#### **APPLICATIONS**

- Cellular phones
- · Audio and video signal routing
- PCMCIA cards
- · Battery operated systems
- Portable instrumentation

#### FUNCTIONAL BLOCK DIAGRAM AND PIN CONFIGURATION

TRUTH TABLE					
Logic	NC1, 2, 3 and 4	NO1, 2, 3 and 4			
0	ON	OFF			
1	OFF	ON			

ORDERING INFORMATION					
Temp. Range	Package	Part Number			
- 40 °C to 85 °C	QFN-16 (3 x 3 mm)	DG2019DN			

ABSOLUTE MAXIMUM RATINGS						
Parameter		Limit	Unit			
Reference V+ to GND		- 0.3 to + 6	V			
IN, COM, NC, NO		- 0.3 to (V+ + 0.3)	v			
Continuous Current (Any terminal)		± 50				
Peak Current (Pulsed at 1 ms, 10 % Duty Cycle)		± 100	mA			
Storage Temperature (D Suffix)		- 65 to 150	°C			
Power Dissipation (Packages) <sup>b</sup>	QFN-16 (3 x 3 mm) <sup>c</sup>	850	mW			

Notes:

a. Signals on NC, NO, or COM or IN exceeding V+ will be clamped by internal diodes. Limit forward diode current to maximum current ratings. b. All leads welded or soldered to PC board.

c. Derate 4.0 mW/°C above 70 °C.

Notes:

a. Room = 25 °C, Full = as determined by the operating suffix.

b. Typical values are for design aid only, not guaranteed nor subject to production testing.

c. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.

d. Guarantee by design, nor subjected to production test.

e.  $V_{IN}$  = input voltage to perform proper function.

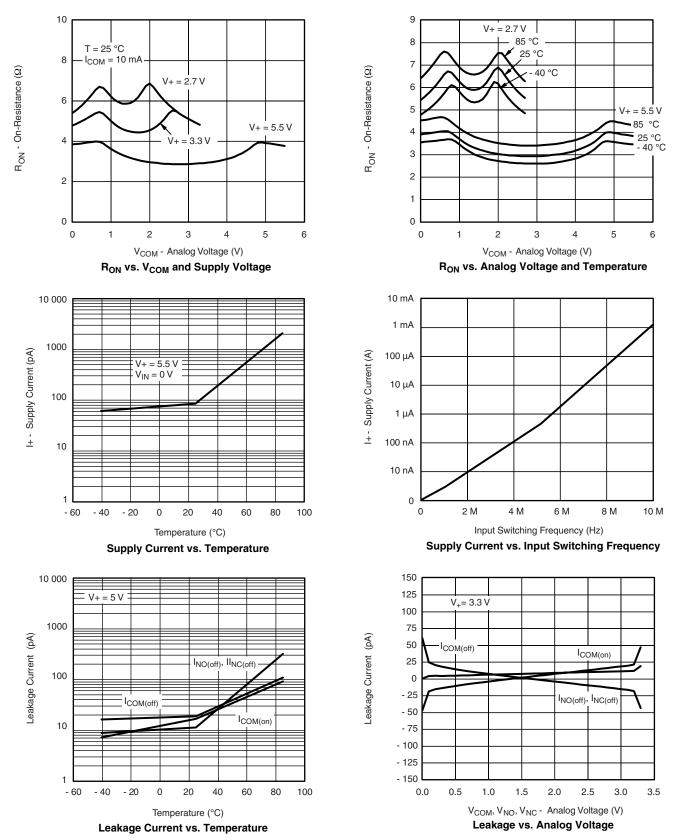

f. Not production tested.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
