The pH Turtle - ideal for schools

The HANNA pH Turtle - The future of pH meters

HI-9815 - pH Tu

HI-9815 - The pH Turtle

The HANNA pH Turtle turns your PC into a pH meter. It reads directly into your PC (0.0 to 14.0 pH) and displays data as a table or graph. The FREE, simple-to-use HANNA software allows continuous logging and calibration on screen.

If you would like to see the software for yourself, you can download it from our Web Site by logging onto the following address:-

<http://www.hannainst.co.uk/turtle/soft>

The software also features a minimum and maximum alarm settings and an audio warning. There is no need for a power supply or serial box. Just plug in and start logging.

The HANNA Turtle comes complete with a professional double junction electrode, Windows 3.11 & 95 compatible software, RS232 cable and datalogger - all for the price of other manufacturers' electrodes.
