

aluderm® Nose Bandage

Rolled compress for the treatment of nose injuries with heavy bleeding. The aluminium vaporized compress role has a high absorption capacity and is easily secured under the nose by means of an elastic band attached to the back of the head. Single sterile packing.

10 03 270

aluderm® Nose Tamponade

A special dressing swab for insertion into the nostril during a nose bleed. Comprises of an aluminium vaporized non sticking wound layer, highly absorbent. The attached thread enables the removal of the tamponade after use. Single sterile packing.

aluderm®-aluplast Plaster Dispenser

This practical dispenser is filled with four varieties of high quality, aluminium vaporised, aluderm®-aluplast wound plasters. Each plaster variety is stored independently in its own compartment, which avoids confusion and gives a clear product overview for the user. When the plasters are used, the dispenser can be simply re-filled.

The dispenser is manufactured from high performance ABS-thermoplastic and measures 160 x 122 x 57 mm. The lower section is sub-divided into three separate compartments for plaster strips (2 different sizes) and fingertip plasters. The transparent upper section contains a compartment for the finger plasters. Due to its compact design and light weight, the aluderm®-aluplast plaster dispenser can be easily stored; a wall mounting is also possible.

The dispenser comes filled with 25 aluderm®-aluplast fingertip plasters, 25 aluderm®-aluplast plaster strips, 7,2 x 2,5 cm, 25 strips, 7,2 x 1,9 cm, as well as 15 aluderm®-aluplast finger plasters, 12 x 2 cm. All plasters contained within the dispenser are individually sealed, which protects against dirt and dust, thus ensuring a better storage and extended product longevity.

All aluderm®-aluplast wound plasters have an aluminised aluderm® wound cushion with BACTEKILLER, the antibacterial agent. aluderm® absorbs all wound discharges so the wound remains dry and clean and promotes epithelialisation and the growth of granulation tissue. BACTEKILLER is bacteriostatic and prohibits the growth and reproduction of bacteria and microorganisms. aluderm®-aluplast plasters are especially recommendable for patients with allergic reactions or sensitive skin.
