## Special-purpose Basic Switch

## Power Switch with Fail-safe Mechanisms

- Minimum contact gap of 3 mm called for in general power switches is satisfied.
■ Fail-safe mechanisms with double return spring and direct drive positive contact opening features.
- Conforms to Class II of VDE Insulation. Safety-oriented structure with 6 mm min. insulation distance between terminals of the same polarity, 8 mm min. between current-carrying metal part and ground, and 8 mm min. between each terminal and non-current-carrying metal part.

■ Pull-on lock model for easy maintenance is also added in D2D series.

■ Quick-connect terminal \#250 series (conforming to DIN standard).

Panel thickness: 1.0 to 2.5 mm

Note: Dimension is $36.7 \pm 0.1$ with a panel thickness of 1.0 mm and $37.0 \pm 0.1$ with a panel thickness of 2.5 mm

## Precautions

## Mounting

Use M4 mounting screws with plain or spring washers to mount the switch. Tighten the screws to a torque of 5 to $7 \mathrm{~kg} \cdot \mathrm{~cm}$ (0.49 to $0.69 \mathrm{~N} \cdot \mathrm{~m})$.

## Pull-on Lock Function

When opening or closing the door, the power ON state of the switch can be checked with the door left open. By closing the door after
maintenance inspection, the switch will resume the normal momentary action. (This feature is ideal for conducting the electrical continuity test, inspection, repair, etc. of the switch after its assembly.) Use of a receptacle with an insulated sleeve or Positive Lock (by AMP) is recommended for terminal wiring. Exercise care that no excessive force is applied to the wired terminals.

| Example |  | To turn on the power when the door is closed | To turn off the power when the door is open | To turn on the power with the door left open |

## Fail-safe Mechanisms

## Double Spring Feature

Two return springs are provided for the pin plunger. Thus, when either of the spring is broken, this feature will prevent the switch from malfunctioning or short-circuiting.
(The pull-on lock switch is not provided with this function.)
