Vishay Beyschlag

# **Precision Thin Film Chip Resistors**

Thin Film Flat Chip Resistors combine the proven reliability of the professional products with an advanced level of precision and stability. Therefore they are perfectly suited for applications in the fields of test and measuring equipment together with industrial and medical electronics.

### **FEATURES**

• Superior overall stability: Class 0.1 and 0.25

- Lead (Pb)-free solder contacts
- Compliant to RoHS directive 2002/95/EC

### **APPLICATIONS**

- Automotive
- Test and measuring equipment
- Medical equipment
- · Industrial equipment

Continuous	75	5 V	75 V		75 V		75 V		
Failure rate: FIT <sub>observed</sub>	≤ 0.1 x	10 <sup>-9</sup> /h	≤ 0.1 2	x 10 <sup>-9</sup> /h	≤ 0.1 x	10 <sup>-9</sup> /h	≤ 0.1 x 10 <sup>-9</sup> /h		

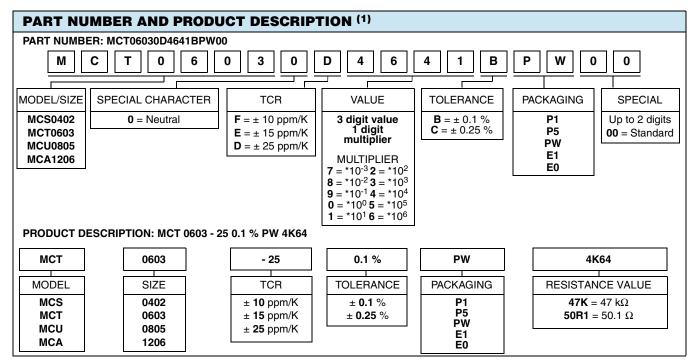

### Note

<sup>(1)</sup> The power dissipation on the resistor generates a temperature rise against the local ambient, depending on the heat flow support of the printed-circuit board (thermal resistance). The rated dissipation applies only if the permitted film temperature is not exceeded.

MCA 1206	1.40	1.50	1.90	4.40	1.50	1.15	1.75	3.80			

#### Note

• The given solder pad dimensions reflect the considerations for board design and assembly as outlined e.g. in standards IEC 61188-5-x, or in publication IPC-7351. They do not guarantee any supposed thermal properties, particularly as these are also strongly influenced by many other parameters.

Still, the given solder pad dimensions will be found adequate for most general applications, e.g. those referring to "standard operation mode".

Precision Thin Film Chip Resistors

Vishay Beyschlag

### **DESCRIPTION**

Production is strictly controlled and follows an extensive set of instructions established for reproducibility. A homogeneous film of metal alloy is deposited on a high grade  $Al_2O_3$  ceramic substrate and conditioned to achieve the desired temperature coefficient. Specially designed inner contacts are deposited on both sides. A special laser is used to achieve the target value by smoothly fine trimming the resistive layer without damaging the ceramics. A further conditioning is applied in order to stabilize the trimming result. The resistor elements are covered by a blue protective coating designed for electrical, mechanical and climatic protection. The terminations receive a final pure tin on nickel plating.

The result of the determined production is verified by an extensive testing procedure and optical inspection performed on 100 % of the individual chip resistors. Only accepted products are laid directly into the paper tape in accordance with **IEC 60286-3** (3).

### **ASSEMBLY**

The resistors are suitable for processing on automatic SMD assembly systems and for automatic soldering using wave, reflow or vapour phase. The encapsulation is resistant to all cleaning solvents commonly used in the electronics industry, including alcohols, esters and aqueous solutions. The suitability of conformal coatings, if applied, shall be qualified by appropriate means to ensure the long-term stability of the whole system.

The resistors are RoHS compliant, the pure tin plating provides compatibility with lead (Pb)-free and lead-containing soldering processes. Solderability is specified for 2 years after production or requalification. The permitted storage time is 20 years. The immunity of the plating against tin whisker growth has been proven under extensive testing.

All products comply with the **GADSL** (1) and the **CEFIC-EECA-EICTA** (2) list of legal restrictions on hazardous substances. This includes full compliance with the following directives:

- 2000/53/EC End of Vehicle life Directive (ELV) an Annex II (ELV II)
- 2002/95/EC Restriction of the use of Hazardous Substances Directive (RoHS)
- 2002/96/EC Waste Electrical and Electronic Equipment Directive (WEEE)

### **APPOVALS**

The resistors are approved within the IECQ-CECC Quality Assessment System for Electronic Components to the detail specification EN 140401-801 which refers to EN 60115-1, EN 140400 and the variety of environmental test procedures of the IEC 60068 <sup>(3)</sup> series.

Conformity is attested by the use of the CECC Logo ( ) as the Mark of Conformity on the package label.

Vishay BEYSCHLAG has achieved "Approval of Manufacturer" in accordance with IEC QC 001002-3, clause 2. The release certificate for "Technology Approval Schedule" in accordance with CECC 240001 based on IEC QC 001002-3, clause 6 is granted for the Vishay BEYSCHLAG manufacturing process.

#### **RELATED PRODUCTS**

On request, resistors are available with **established reliability** in accordance with **EN 140401-801** version E. Please refer to the special datasheet document no. **28744** for information on failure rate level, available resistance ranges and order codes.

For more information about products with higher rated power and higher operation temperature please refer to the **Professional Thin Film Chip Resistor** datasheet document no. **28705**.

Precision **chip resistor arrays** may be used in voltage divider applications or precision amplifiers where close matching between multiple resistors is necessary. Please refer to the ACAS 0612 - Precision datasheet document no. **28751**.

### **TEST AND REQUIREMENTS**

All tests are carried out in accordance with the following specifications:

EN 60115-1, generic specification (includes tests)

EN 140400, sectional specification (includes schedule for qualification approval)

EN 140401-801, detail specification (includes schedule for conformance inspection)

The components are approved in accordance with the European CECC-system, where applicable. The following table contains only the most important tests. For the full test schedule refer to the documents listed above. The testing also covers most of the requirements specified by EIA/IS-703 and JIS-C-5202.

The tests are carried out in accordance with IEC 60068 and under standard atmospheric conditions in accordance with

IEC 60068-1, 5.3. Climatic category LCT/UCT/56 (rated temperature range: Lower Category Temperature, Upper Category Temperature; damp heat, long term, 56 days) is valid. Unless otherwise specified the following values apply:

Temperature: 15 °C to 35 °C Relative humidity: 45 % to 75 %

Air pressure: 86 kPa to 106 kPa (860 mbar to 1060 mbar).

The components are mounted for testing on boards in accordance with EN 60115-1, 4.31 unless otherwise specified.

The parameters stated in the Test Procedures and Requirements table are based on the required tests and permitted limits of EN 140401-801. However, some additional tests and a number of improvements against those minimum requirements have been included.

#### Notes

<sup>(1)</sup> See 4.25.1 (above): special requirements for type MCA 1206

<sup>(2)</sup> The pulse load stability of professional MFC resistors applies for precision resistors also. However, severe pulse loads are likely to jeopardise precision stability requirements.

Vishay Beyschlag

Precision Thin Film Chip Resistors

### 12NC INFORMATION FOR HISTORICAL CODING REFERENCE ONLY

- The resistors have a 12-digit numeric code starting with 2312.
- The subsequent 4 digits indicate the resistor type, specification and packaging; see the 12NC table.
- The remaining 4 digits indicate the resistance value:
  - The first 3 digits indicate the resistance value.
  - The last digit indicates the resistance decade in accordance with the 12NC Indicating Resistance Decade table.

### **Last Digit of 12NC Indicating Resistance Decade**

RESISTANCE DECADE	LAST DIGIT
10 Ω to 99.9 Ω	9
100 Ω to 999 Ω	1
1 kΩ to 9.99 kΩ	2
10 kΩ to 99.9 kΩ	3
100 kΩ to 999 kΩ	4
1 MΩ to 9.99 MΩ	5

### 12NC Example

The 12NC of a MCT 0603 resistor, value 47 k $\Omega$  and TCR 25 with  $\pm$  0.1 % tolerance, supplied in cardboard tape of 5000 units per reel is: 2312 216 74703.
